00013 //
00014 // Please report all bugs and problems on the following page:
00015 //
00016 //     http://www.fltk.org/str.php
00017 //
00018 //
00019 // This function fills in the fltk font table with all the fonts that
00020 // are found on the X server. It tries to place the fonts into families
00021 // and to sort them so the first 4 in a family are normal, bold, italic,
00022 // and bold italic.
00023 //
00024 // Standard X fonts are matched by a pattern that is always of
00025 // this form, and this pattern is put in the table:
00026 // "--family-weight-slant-width1-style--registry-encoding"
00027 //
00028 // Non-standard font names (those not starting with '-') are matched
00029 // by a pattern of the form "prefix*suffix", where the '*' is where
00030 // fltk thinks the point size is, or by the actual font name if no
00031 // point size is found.
00032 //
00033 // Fltk knows how to pull an "attribute" out of a font name, such as
00034 // bold or italic, by matching known x font field values. All words
00035 // that don't match a known attribute are combined into the "name"
00036 // of the font. Names are compared before attributes for sorting, this
00037 // makes the bold and plain version of a font come out next to each
00038 // other despite the poor X font naming scheme.
00039 //
00040 // By default fl_set_fonts() only does iso8859-1 encoded fonts. You can
00041 // do all normal X fonts by passing "--*" or every possible font with "*".
00042 //
00043 // Fl::set_font will take strings other than the ones this stores
00044 // and can identify any font on X that way. You may want to write your
00045 // own system of font management and not use this code.
00046 //
00047 // turn word N of a X font name into either some attribute bits
00048 // (right now 0, FL_BOLD, or FL_ITALIC), or into -1 indicating that
00049 // the word should be put into the name:
00050 //
```

00012 * the file "COPYING" which should have been included with this file. If this
00013 * file is missing or damaged, see the license at:
00014 *
00015 *     http://www.fltk.org/COPYING.php
00016 *
00017 * Please report all bugs and problems on the following page:
00018 *
00019 *     http://www.fltk.org/str.php
00020 *
00021 * It is required that 'SIZE_MAX' is at least 'INT_MAX'.
00022 * Don't use a C++ compiler to build this module.
00023 *
00024 * The build system must define 'HAVE_PTHREAD' and link against a potentially
00025 * required library to switch this implementation into thread-safe mode.
00026 * The POSIX.1c-1995 extension is required if 'HAVE_PTHREAD' is defined.
00027 *
00028 * Note:
00029 * In theory, a system that provide threads should also provide 'readdir_r()',
00030 * a thread-safe version of 'readdir()'. In reality this is not always the case.
00031 * In addition there may be a race condition that can lead to a buffer overflow:
00032 * http://womble.decadent.org.uk/readdir_r-advisory.html

00001 /* $XFree86: xc/lib/X11/lcUniConv/big5_emacs.h,v 1.1 2000/11/28 18:50:06 dawes Exp $ */
00002
00003 /*
00004  * BIG5-0 and BIG5-1
00005  */
00006
00007 /*
00008  * BIG5 with its 13494 characters doesn't fit in a single 94x94 or 96x96
00009  * block. Therefore Emacs/Mule developers, in a typically Japanese way of
00010  * thinking, have developed an alternative encoding of BIG5 in two 94x94
00011  * planes, very similar to the SHIFT_JIS encoding for JISX0208.
00012
00013  * Conversion between BIG5 codes (s1,s2) and BIG5-0 codes (c1,c2):
00014  * Example. (s1,s2) = 0xA140, (c1,c2) = 0x2121.
00015  * 0xA1 <= s1 <= 0xC7, 0x40 <= s2 <= 0x7E || 0xA1 <= s2 <= 0xFE,
00016  * 0x21 <= c1 <= 0x62, 0x21 <= c2 <= 0x7E.
00017  * Invariant:
00018  *   157*(s1-0xA1) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
00019  *   = 94*(c1-0x21)+(c2-0x21)
00020  * Conversion (s1,s2) -> (c1,c2):
00021  *   t := 157*(s1-0xA1) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
00022  *   c1 := (t div 94) + 0x21
00023  *   c2 := (t mod 94) + 0x21
00024  * Conversion (c1,c2) -> (s1,s2):
00025  *   t := 94*(c1-0x21)+(c2-0x21)
00026  *   t2 := t mod 157
00027  *   s1 := (t div 157) + 0xA1
00028  *   s2 := (t2 < 0x3F ? t2+0x40 : t2+0x62)
00029
00030  * Conversion between BIG5 codes (s1,s2) and BIG5-1 codes (c1,c2):
00031  * Example. (s1,s2) = 0xC940, (c1,c2) = 0x2121.
00032  * 0xC9 <= s1 <= 0xF9, 0x40 <= s2 <= 0x7E || 0xA1 <= s2 <= 0xFE,
00033  * 0x21 <= c1 <= 0x72, 0x21 <= c2 <= 0x7E.
00034  * Invariant:
00035  *   157*(s1-0xC9) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
00036  *   = 94*(c1-0x21)+(c2-0x21)
00037  * Conversion (s1,s2) -> (c1,c2):
00038  *   t := 157*(s1-0xC9) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
00039  *   c1 := (t div 94) + 0x21
00040  *   c2 := (t mod 94) + 0x21
00041  * Conversion (c1,c2) -> (s1,s2):
00042  *   t := 94*(c1-0x21)+(c2-0x21)
00043  *   t2 := t mod 157
00044  *   s1 := (t div 157) + 0xC9

00002  * FLTK: Important!
00003  * This file should remain as close to Markus Kuhn's original source
00004  * as possible for easy checking for changes later, however unlikely.
00005  * All customisations to work with FLTK shall be annotated!
00006  */
00007
00008 /*
00009  * This is an implementation of wcwidth() and wcswidth() (defined in
00010  * IEEE Std 1002.1-2001) for Unicode.
00011  *
00012  * http://www.opengroup.org/onlinepubs/007904975/functions/wcwidth.html
00013  * http://www.opengroup.org/onlinepubs/007904975/functions/wcswidth.html
00014  *
00015  * In fixed-width output devices, Latin characters all occupy a single
00016  * "cell" position of equal width, whereas ideographic CJK characters
00017  * occupy two such cells. Interoperability between terminal-line
00018  * applications and (teletype-style) character terminals using the
00019  * UTF-8 encoding requires agreement on which character should advance
00020  * the cursor by how many cell positions. No established formal
00021  * standards exist at present on which Unicode character shall occupy
00022  * how many cell positions on character terminals. These routines are
00023  * a first attempt of defining such behavior based on simple rules
00024  * applied to data provided by the Unicode Consortium.
00025  *
00026  * For some graphical characters, the Unicode standard explicitly
00027  * defines a character-cell width via the definition of the East Asian
00028  * FullWidth (F), Wide (W), Half-width (H), and Narrow (Na) classes.
00029  * In all these cases, there is no ambiguity about which width a
00030  * terminal shall use. For characters in the East Asian Ambiguous (A)
00031  * class, the width choice depends purely on a preference of backward
00032  * compatibility with either historic CJK or Western practice.
00033  * Choosing single-width for these characters is easy to justify as
00034  * the appropriate long-term solution, as the CJK practice of
00035  * displaying these characters as double-width comes from historic
00036  * implementation simplicity (8-bit encoded characters were displayed
00037  * single-width and 16-bit ones double-width, even for Greek,
00038  * Cyrillic, etc.) and not any typographic considerations.
00039  *
00040  * Much less clear is the choice of width for the Not East Asian
00041  * (Neutral) class. Existing practice does not dictate a width for any
00042  * of these characters. It would nevertheless make sense
00043  * typographically to allocate two character cells to characters such
00044  * as for instance EM SPACE or VOLUME INTEGRAL, which cannot be
00045  * represented adequately with a single-width glyph. The following
00046  * routines at present merely assign a single-cell width to all
00047  * neutral characters, in the interest of simplicity. This is not
00048  * entirely satisfactory and should be reconsidered before
00049  * establishing a formal standard in this area. At the moment, the
00050  * decision which Not East Asian (Neutral) characters should be
00051  * represented by double-width glyphs cannot yet be answered by
00052  * applying a simple rule from the Unicode database content. Setting
00053  * up a proper standard for the behavior of UTF-8 character terminals
00054  * will require a careful analysis not only of each Unicode character,
00055  * but also of each presentation form, something the author of these
00056  * routines has avoided to do so far.
