- [FI_Font](#) [labelfont](#) () const
 - Gets the font to use.*
- void [labelfont](#) ([FI_Font](#) f)
 - Sets the font to use.*
- [FI_Fontsize](#) [labelsize](#) () const
 - Gets the font size in pixels.*
- void [labelsize](#) ([FI_Fontsize](#) pix)
 - Sets the font size in pixels.*
- [FI_Labeltype](#) [labeltype](#) () const
 - Gets the label type.*
- void [labeltype](#) ([FI_Labeltype](#) a)
 - Sets the label type.*
- void [measure_label](#) (int &ww, int &hh) const
 - Sets width ww and height hh accordingly with the label size.*

- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar t`)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)

- Sets the user data for this widget.*
- unsigned int `visible` () const
 - Returns whether a widget is visible.*
- unsigned int `visible_focus` ()
 - Checks whether this widget has a visible focus.*
- void `visible_focus` (int v)
 - Modifies keyboard focus navigation.*
- int `visible_r` () const
 - Returns whether a widget and all its parents are visible.*
- int `w` () const
 - Gets the widget width.*
- `FI_When` `when` () const
 - Returns the conditions under which the callback is called.*
- void `when` (uchar i)
 - Sets the flags used to decide when a callback is called.*
- `FI_Window` * `window` () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int `x` () const
 - Gets the widget position in its window.*
- int `y` () const
 - Gets the widget position in its window.*
- virtual `~FI_Widget` ()
 - Destroys the widget.*

Protected Member Functions

- virtual void `draw_overlay` ()=0
 - You must subclass `FI_Overlay_Window` and provide this method.*
- `FI_Overlay_Window` (int W, int H, const char *l=0)
 - See `FI_Overlay_Window::FI_Overlay_Window(int X, int Y, int W, int H, const char *l=0)`*
- `FI_Overlay_Window` (int X, int Y, int W, int H, const char *l=0)
 - Creates a new `FI_Overlay_Window` widget using the given position, size, and label (title) string.*

Protected Member Functions inherited from `FI_Double_Window`

- void `flush` (int eraseoverlay)
 - Forces the window to be redrawn.*

Protected Member Functions inherited from `FI_Window`

- virtual void `draw` ()
 - Draws the widget.*
- int `force_position` () const
 - Returns the internal state of the window's `FORCE_POSITION` flag.*
- void `force_position` (int force)
 - Sets an internal flag that tells FLTK and the window manager to honor position requests.*
- void `free_icons` ()
 - Deletes all icons previously attached to the window.*

Protected Member Functions inherited from [FI_Group](#)

- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Window

- static [FI_Window](#) * [current](#) ()
Returns the last window that was made current.
- static void [default_callback](#) ([FI_Window](#) *, void *v)
Back compatibility: Sets the default callback v for win to call on close event.
- static void [default_icon](#) (const [FI_RGB_Image](#) *)
Sets a single default window icon.
- static void [default_icons](#) (const [FI_RGB_Image](#) *[], int)
Sets the default window icons.
- static const char * [default_xclass](#) ()
Returns the default xclass.
- static void [default_xclass](#) (const char *)
Sets the default window xclass.

Static Public Member Functions inherited from FI_Group

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 ,
[OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 ,
[MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 ,
[GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
 = 1<<19 ,
[USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Attributes inherited from FI_Double_Window

- char [force_doublebuffering_](#)
Force double buffering, even if the OS already buffers windows (overlays need that on MacOS and Windows2000)

Protected Attributes inherited from [Fl_Window](#)

- [shape_data_type](#) * [shape_data_](#)
non-null means the window has a non-rectangular shape

Static Protected Attributes inherited from [Fl_Window](#)

- static [Fl_Window](#) * [current_](#)
Stores the last window that was made current.

9.91.1 Detailed Description

This window provides double buffering and also the ability to draw the "overlay" which is another picture placed on top of the main image.

The overlay is designed to be a rapidly-changing but simple graphic such as a mouse selection box. [Fl_Overlay_Window](#) uses the overlay planes provided by your graphics hardware if they are available.

If no hardware support is found the overlay is simulated by drawing directly into the on-screen copy of the double-buffered window, and "erased" by copying the backbuffer over it again. This means the overlay will blink if you change the image in the window.

9.91.2 Constructor & Destructor Documentation

9.91.2.1 [Fl_Overlay_Window\(\)](#)

```
Fl_Overlay_Window::Fl_Overlay_Window (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 ) [protected]
```

Creates a new [Fl_Overlay_Window](#) widget using the given position, size, and label (title) string. If the positions (x,y) are not given, then the window manager will choose them.

9.91.3 Member Function Documentation

9.91.3.1 [draw_overlay\(\)](#)

```
virtual void Fl_Overlay_Window::draw_overlay ( ) [protected], [pure virtual]
```

You must subclass [Fl_Overlay_Window](#) and provide this method.

It is just like a [draw\(\)](#) method, except it draws the overlay. The overlay will have already been "cleared" when this is called. You can use any of the routines described in [<FL/fl_draw.H>](#).

9.91.3.2 [flush\(\)](#)

```
void Fl_Overlay_Window::flush ( ) [virtual]
```

Forces the window to be redrawn.

Reimplemented from [Fl_Double_Window](#).

9.91.3.3 [hide\(\)](#)

```
void Fl_Overlay_Window::hide ( ) [virtual]
```

Removes the window from the screen.

If the window is already hidden or has not been shown then this does nothing and is harmless.

Reimplemented from [Fl_Double_Window](#).

9.91.3.4 [redraw_overlay\(\)](#)

```
void Fl_Overlay_Window::redraw_overlay ( )
```

Call this to indicate that the overlay data has changed and needs to be redrawn.

The overlay will be clear until the first time this is called, so if you want an initial display you must call this after calling [show\(\)](#).

9.91.3.5 [resize\(\)](#)

```
void Fl_Overlay_Window::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Changes the size and position of the window.

If [shown\(\)](#) is true, these changes are communicated to the window server (which may refuse that size and cause a further resize). If [shown\(\)](#) is false, the size and position are used when [show\(\)](#) is called. See [Fl_Group](#) for the effect of resizing on the child widgets.

You can also call the [Fl_Widget](#) methods [size\(x,y\)](#) and [position\(w,h\)](#), which are inline wrappers for this virtual function.

A top-level window can not force, but merely suggest a position and size to the operating system. The window manager may not be willing or able to display a window at the desired position or with the given dimensions. It is up to the application developer to verify window parameters after the resize request.

Reimplemented from [Fl_Double_Window](#).

9.91.3.6 [show\(\)](#)

```
void Fl_Overlay_Window::show ( ) [virtual]
```

Puts the window on the screen.

Usually (on X) this has the side effect of opening the display.

If the window is already shown then it is restored and raised to the top. This is really convenient because your program can call [show\(\)](#) at any time, even if the window is already up. It also means that [show\(\)](#) serves the purpose of [raise\(\)](#) in other toolkits.

[Fl_Window::show\(int argc, char **argv\)](#) is used for top-level windows and allows standard arguments to be parsed from the command-line.

Note

For some obscure reasons [Fl_Window::show\(\)](#) resets the current group by calling [Fl_Group::current\(0\)](#). The comments in the code say "get rid of very common user bug: forgot end()". Although this is true it may have unwanted side effects if you [show\(\)](#) an unrelated window (maybe for an error message or warning) while building a window or any other group widget.

Todo Check if we can remove resetting the current group in a later FLTK version (after 1.3.x). This may break "already broken" programs though if they rely on this "feature".

9.92 Fl_Pack Class Reference

This widget was designed to add the functionality of compressing and aligning widgets.

```
#include <Fl_Pack.H>
```

Inheritance diagram for [Fl_Pack](#):

Public Types

- enum { **VERTICAL** = 0 , **HORIZONTAL** = 1 }

Public Member Functions

- **FI_Pack** (int x, int y, int w, int h, const char *l=0)
*Creates a new **FI_Pack** widget using the given position, size, and label string.*
- **uchar horizontal** () const
*Same as **FI_Group::type()***
- int **spacing** () const
Gets the number of extra pixels of blank space that are added between the children.
- void **spacing** (int i)
Sets the number of extra pixels of blank space that are added between the children.

Public Member Functions inherited from **FI_Group**

- **FI_Widget** *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** (**FI_Widget** &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (**FI_Widget** *o)
*See void **FI_Group::add(FI_Widget &w)***
- void **add_resizable** (**FI_Widget** &o)
Adds a widget to the group and makes it the resizable widget.
- **FI_Widget** *const * **array** () const
Returns a pointer to the array of children.
- virtual **FI_Group** * **as_group** ()
*Returns an **FI_Group** pointer if this widget is an **FI_Group**.*
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- **FI_Widget** * **child** (int n) const
*Returns **array()[n]**.*
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void **end** ()
*Exactly the same as **current(this->parent())**.*
- int **find** (const **FI_Widget** &o) const

- See `int FL_Group::find(const FL_Widget *w) const`.
- `int find (const FL_Widget *) const`
 - Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, const char *=0)`
 - Creates a new `FL_Group` widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
 - This is for forms compatibility only.
- `int handle (int)`
 - Handles the specified event.
- `void init_sizes ()`
 - Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
 - The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
 - This does `insert(w, find(before))`.
- `void remove (FL_Widget &)`
 - Removes a widget from the group but does not delete it.
- `void remove (FL_Widget *o)`
 - Removes the widget `o` from the group.
- `void remove (int index)`
 - Removes the widget at `index` from the group but does not delete it.
- `FL_Widget * resizable () const`
 - See `void FL_Group::resizable(FL_Widget *box)`
- `void resizable (FL_Widget &o)`
 - See `void FL_Group::resizable(FL_Widget *box)`
- `void resizable (FL_Widget *o)`
 - The resizable widget defines the resizing box for the group.
- `void resize (int, int, int, int)`
 - Resizes the `FL_Group` widget and all of its children.
- `virtual ~FL_Group ()`
 - The destructor also deletes all the children.

Public Member Functions inherited from FL_Widget

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
 - Activates the widget.
- `unsigned int active () const`
 - Returns whether the widget is active.
- `int active_r () const`
 - Returns whether the widget and all of its parents are active.
- `FL_Align align () const`
 - Gets the label alignment.
- `void align (FL_Align alignment)`
 - Sets the label alignment.
- `long argument () const`
 - Gets the current user data (long) argument that is passed to the callback function.
- `void argument (long v)`
 - Sets the current user data (long) argument that is passed to the callback function.

- virtual class `FI_Gl_Window * as_gl_window ()`
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
- virtual `FI_Window * as_window ()`
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype box () const`
Gets the box type of the widget.
- void `box (FI_Boxtype new_box)`
Sets the box type for the widget.
- `FI_Callback_p callback () const`
Gets the current callback function for the widget.
- void `callback (FI_Callback *cb)`
Sets the current callback function for the widget.
- void `callback (FI_Callback *cb, void *p)`
Sets the current callback function for the widget.
- void `callback (FI_Callback0 *cb)`
Sets the current callback function for the widget.
- void `callback (FI_Callback1 *cb, long p=0)`
Sets the current callback function for the widget.
- unsigned int `changed () const`
Checks if the widget value changed since the last callback.
- void `clear_active ()`
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed ()`
Marks the value of the widget as unchanged.
- void `clear_damage (uchar c=0)`
Clears or sets the damage flags.
- void `clear_output ()`
Sets a widget to accept input.
- void `clear_visible ()`
Hides the widget.
- void `clear_visible_focus ()`
Disables keyboard focus navigation with this widget.
- `FI_Color color () const`
Gets the background color of the widget.
- void `color (FI_Color bg)`
Sets the background color of the widget.
- void `color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
- `FI_Color color2 () const`
For back compatibility only.
- void `color2 (unsigned a)`
For back compatibility only.
- int `contains (const FI_Widget *w) const`
Checks if w is a child of this widget.
- void `copy_label (const char *new_label)`
Sets the current label.
- void `copy_tooltip (const char *text)`
Sets the current tooltip text.
- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- void `damage (uchar c)`

- Sets the damage bits for the widget.*
- void [damage](#) (uchar c, int x, int y, int w, int h)
 - Sets the damage bits for an area inside the widget.*
- int **damage_resize** (int, int, int, int)
 - Internal use only.*
- void [deactivate](#) ()
 - Deactivates the widget.*
- [FL_Image](#) * [deimage](#) ()
 - Gets the image that is used as part of the widget label.*
- const [FL_Image](#) * **deimage** () const
- void [deimage](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label.*
- void [deimage](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label.*
- void [do_callback](#) ()
 - Calls the widget callback.*
- void [do_callback](#) ([FL_Widget](#) *o, long arg)
 - Calls the widget callback.*
- void [do_callback](#) ([FL_Widget](#) *o, void *arg=0)
 - Calls the widget callback.*
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
 - Gets the widget height.*
- virtual void [hide](#) ()
 - Makes a widget invisible.*
- [FL_Image](#) * [image](#) ()
 - Gets the image that is used as part of the widget label.*
- const [FL_Image](#) * **image** () const
- void [image](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label.*
- void [image](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label.*
- int [inside](#) (const [FL_Widget](#) *wgt) const
 - Checks if this widget is a child of wgt.*
- int [is_label_copied](#) () const
 - Returns whether the current label was assigned with [copy_label\(\)](#).*
- const char * [label](#) () const
 - Gets the current label text.*
- void [label](#) (const char *text)
 - Sets the current label pointer.*
- void [label](#) ([FL_Labeltype](#) a, const char *b)
 - Shortcut to set the label text and type in one call.*
- [FL_Color](#) [labelcolor](#) () const
 - Gets the label color.*
- void [labelcolor](#) ([FL_Color](#) c)
 - Sets the label color.*
- [FL_Font](#) [labelfont](#) () const
 - Gets the font to use.*
- void [labelfont](#) ([FL_Font](#) f)
 - Sets the font to use.*

- [FI_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FI_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const

- Returns a pointer to the top-level window for the widget.*

 - `FI_Window * top_window_offset` (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const

Gets the widget type.
- `void type` (uchar t)

Sets the widget type.
- `int use_accents_menu` ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data` () const

Gets the user data for this widget.
- `void user_data` (void *v)

Sets the user data for this widget.
- `unsigned int visible` () const

Returns whether a widget is visible.
- `unsigned int visible_focus` ()

Checks whether this widget has a visible focus.
- `void visible_focus` (int v)

Modifies keyboard focus navigation.
- `int visible_r` () const

Returns whether a widget and all its parents are visible.
- `int w` () const

Gets the widget width.
- `FI_When when` () const

Returns the conditions under which the callback is called.
- `void when` (uchar i)

Sets the flags used to decide when a callback is called.
- `FI_Window * window` () const

Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x` () const

Gets the widget position in its window.
- `int y` () const

Gets the widget position in its window.
- `virtual ~FI_Widget` ()

Destroys the widget.

Protected Member Functions

- `void draw` ()

Draws the widget.

Protected Member Functions inherited from FI_Group

- `void draw_child` (FI_Widget &widget) const

Forces a child to redraw.
- `void draw_children` ()

Draws all children of the group.
- `void draw_outside_label` (const FI_Widget &widget) const

Parents normally call this to draw outside labels of child widgets.
- `int * sizes` ()

Returns the internal array of widget sizes and positions.
- `void update_child` (FI_Widget &widget) const

Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * **current** ()
Returns the currently active group.
- static void **current** ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
 - INACTIVE = 1<<0 , INVISIBLE = 1<<1 , OUTPUT = 1<<2 , NOBORDER = 1<<3 ,

flags possible values enumeration.

9.92.1 Detailed Description

This widget was designed to add the functionality of compressing and aligning widgets.

If `type()` is `FI_Pack::HORIZONTAL` all the children are resized to the height of the `FI_Pack`, and are moved next to each other horizontally. If `type()` is not `FI_Pack::HORIZONTAL` then the children are resized to the width and are stacked below each other. Then the `FI_Pack` resizes itself to surround the child widgets.

This widget is needed for the `FI_Tabs`. In addition you may want to put the `FI_Pack` inside an `FI_Scroll`.

The resizable for `FI_Pack` is set to `NULL` by default.

See also: `FI_Group::resizable()`

9.92.2 Constructor & Destructor Documentation

9.92.2.1 FI_Pack()

```
FI_Pack::FI_Pack (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new `FI_Pack` widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the `FI_Pack` and all of it's children can be automatic (local) variables, but you must declare the `FI_Pack` *first*, so that it is destroyed last.

9.92.3 Member Function Documentation

9.92.3.1 draw()

```
void FI_Pack::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call `redraw()` instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because `draw()` is virtual) like this:

```
FI_Widget *s = &scroll; // scroll is an embedded FI_Scrollbar
s->draw(); // calls FI_Scrollbar::draw()
```

Reimplemented from `FI_Group`.

The documentation for this class was generated from the following files:

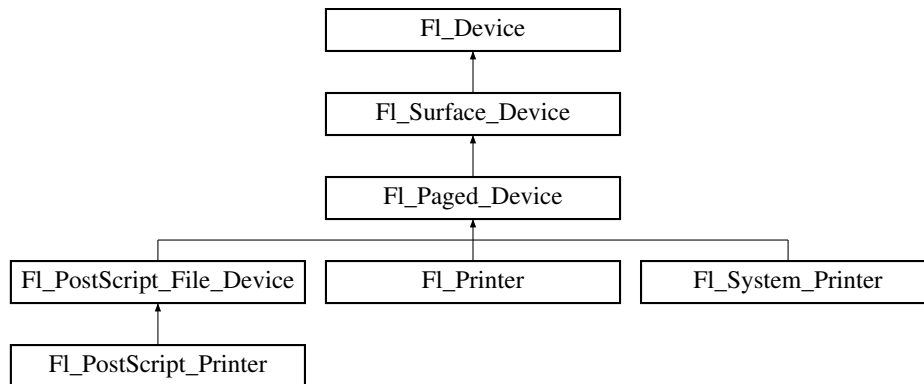

- FI_Pack.H
- FI_Pack.cxx

9.93 Fl_Paged_Device Class Reference

Represents page-structured drawing surfaces.

```
#include <Fl_Paged_Device.H>
```

Inheritance diagram for Fl_Paged_Device:

Classes

- struct [page_format](#)
width, height and name of a page format

Public Types

- enum [Page_Format](#) {
A0 = 0 , **A1** , **A2** , **A3** ,
A4 , **A5** , **A6** , **A7** ,
A8 , **A9** , **B0** , **B1** ,
B2 , **B3** , **B4** , **B5** ,
B6 , **B7** , **B8** , **B9** ,
B10 , **C5E** , **DLE** , **EXECUTIVE** ,
FOLIO , **LEDGER** , **LEGAL** , **LETTER** ,
TABLOID , **ENVELOPE** , **MEDIA** = 0x1000 }
Possible page formats.
- enum [Page_Layout](#) { **PORTRAIT** = 0 , **LANDSCAPE** = 0x100 , **REVERSED** = 0x200 , **ORIENTATION** = 0x300 }
Possible page layouts.

Public Member Functions

- const char * [class_name](#) ()
Returns the name of the class of this object.
- virtual void [end_job](#) (void)
To be called at the end of a print job.
- virtual int [end_page](#) (void)
To be called at the end of each page.
- virtual void [margins](#) (int *left, int *top, int *right, int *bottom)
Computes the dimensions of margins that lie between the printable page area and the full page.
- virtual void [origin](#) (int *x, int *y)
Computes the page coordinates of the current origin of graphics functions.
- virtual void [origin](#) (int x, int y)
Sets the position in page coordinates of the origin of graphics functions.
- virtual void [print_widget](#) ([Fl_Widget](#) *widget, int delta_x=0, int delta_y=0)

- Draws the widget on the printed page.*

 - void [print_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)

Prints a window with its title bar and frame if any.
- virtual void [print_window_part](#) ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)

Prints a rectangular part of an on-screen window.
- virtual int [printable_rect](#) (int *w, int *h)

Computes the width and height of the printable area of the page.
- virtual void [rotate](#) (float angle)

Rotates the graphics operations relatively to paper.
- virtual void [scale](#) (float scale_x, float scale_y=0.)

Changes the scaling of page coordinates.
- virtual int [start_job](#) (int pagecount, int *frompage=NULL, int *topage=NULL)

Starts a print job.
- virtual int [start_page](#) (void)

Starts a new printed page.
- virtual void [translate](#) (int x, int y)

Translates the current graphics origin accounting for the current rotation.
- virtual void [untranslate](#) (void)

Undoes the effect of a previous [translate\(\)](#) call.
- virtual [~FI_Paged_Device](#) ()

The destructor.

Public Member Functions inherited from [FI_Surface_Device](#)

- const char * [class_name](#) ()

Returns the name of the class of this object.
- [FI_Graphics_Driver](#) * [driver](#) ()

Returns the graphics driver of this drawing surface.
- void [driver](#) ([FI_Graphics_Driver](#) *graphics_driver)

Sets the graphics driver of this drawing surface.
- virtual void [set_current](#) (void)

Make this surface the current drawing surface.
- virtual [~FI_Surface_Device](#) ()

The destructor.

Public Member Functions inherited from [FI_Device](#)

- virtual [~FI_Device](#) ()

Virtual destructor.

Static Public Attributes

- static const char * [class_id](#) = "FI_Paged_Device"
 - static const [page_format](#) [page_formats](#) [[NO_PAGE_FORMATS](#)]
- width, height and name of all elements of the enum [Page_Format](#).*

Static Public Attributes inherited from [FI_Surface_Device](#)

- static const char * [class_id](#) = "FI_Surface_Device"

Static Public Attributes inherited from [FI_Device](#)

- static const char * [class_id](#) = "FI_Device"
- A string that identifies each subclass of [FI_Device](#).*

Protected Member Functions

- **FI_Paged_Device** ()

The constructor.

Protected Member Functions inherited from FI_Surface_Device

- **FI_Surface_Device** ([FI_Graphics_Driver](#) *graphics_driver)

Constructor that sets the graphics driver to use for the created surface.

Protected Attributes

- int **x_offset**

horizontal offset to the origin of graphics coordinates

- int **y_offset**

vertical offset to the origin of graphics coordinates

Friends

- class **FI_Copy_Surface**
- class **FI_Image_Surface**

Additional Inherited Members**Static Public Member Functions inherited from FI_Surface_Device**

- static [FI_Surface_Device](#) * **surface** ()

The current drawing surface.

9.93.1 Detailed Description

Represents page-structured drawing surfaces.

This class has no public constructor: don't instantiate it; use [FI_Printer](#) or [FI_PostScript_File_Device](#) instead.

9.93.2 Member Enumeration Documentation**9.93.2.1 Page_Format**

enum [Fl_Paged_Device::Page_Format](#)

Possible page formats.

All paper formats with pre-defined width and height.

Enumerator

A0	A0 format.
A4	A4 format.
LETTER	Letter format.

9.93.2.2 Page_Layout

enum [Fl_Paged_Device::Page_Layout](#)

Possible page layouts.

Enumerator

PORTRAIT	Portrait orientation.
LANDSCAPE	Landscape orientation.

Enumerator

REVERSED	Reversed orientation.
ORIENTATION	orientation

9.93.3 Member Function Documentation

9.93.3.1 class_name()

```
const char * Fl_Paged_Device::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the `class_name()` function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an `Fl_Device` subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from `Fl_Device`.

Reimplemented in `Fl_PostScript_File_Device`, `Fl_System_Printer`, `Fl_PostScript_Printer`, and `Fl_Printer`.

9.93.3.2 end_job()

```
void Fl_Paged_Device::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented in `Fl_PostScript_File_Device`, `Fl_System_Printer`, and `Fl_Printer`.

9.93.3.3 end_page()

```
int Fl_Paged_Device::end_page (
    void ) [virtual]
```

To be called at the end of each page.

Returns

0 if OK, non-zero if any error.

Reimplemented in `Fl_PostScript_File_Device`, `Fl_System_Printer`, and `Fl_Printer`.

9.93.3.4 margins()

```
void Fl_Paged_Device::margins (
    int * left,
    int * top,
    int * right,
    int * bottom ) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by `scale()` calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented in `Fl_PostScript_File_Device`, `Fl_System_Printer`, and `Fl_Printer`.

9.93.3.5 origin() [1/2]

```
void Fl_Paged_Device::origin (
```

```

    int * x,
    int * y ) [virtual]

```

Computes the page coordinates of the current origin of graphics functions.

Parameters

out	<i>x</i>	If non-null, * <i>x</i> is set to the horizontal page offset of graphics origin.
out	<i>y</i>	Same as above, vertically.

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.6 origin() [2/2]

```

void Fl_Paged_Device::origin (
    int x,
    int y ) [virtual]

```

Sets the position in page coordinates of the origin of graphics functions.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the page printable area. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls. Successive [origin\(\)](#) calls don't combine their effects.

Parameters

in	<i>x</i>	Horizontal position in page coordinates of the desired origin of graphics functions.
in	<i>y</i>	Same as above, vertically.

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.7 print_widget()

```

void Fl_Paged_Device::print_widget (
    Fl_Widget * widget,
    int delta_x = 0,
    int delta_y = 0 ) [virtual]

```

Draws the widget on the printed page.

The widget's position on the printed page is determined by the last call to [origin\(\)](#) and by the optional `delta_x` and `delta_y` arguments. Its dimensions are in points unless there was a previous call to [scale\(\)](#).

Parameters

in	<i>widget</i>	Any FLTK widget (e.g., standard, custom, window).
in	<i>delta_x</i>	Optional horizontal offset for positioning the widget relatively to the current origin of graphics functions.
in	<i>delta_y</i>	Same as above, vertically.

Reimplemented in [Fl_Printer](#).

9.93.3.8 print_window()

```

void Fl_Paged_Device::print_window (
    Fl_Window * win,
    int x_offset = 0,
    int y_offset = 0 )

```

Prints a window with its title bar and frame if any.

`x_offset` and `y_offset` are optional coordinates of where to position the window top left. Equivalent to [print_widget\(\)](#) if `win` is a subwindow or has no border. Use [Fl_Window::decorated_w\(\)](#) and

[Fl_Window::decorated_h\(\)](#) to get the size of the printed window.

9.93.3.9 print_window_part()

```
void Fl_Paged_Device::print_window_part (
    Fl_Window * win,
    int x,
    int y,
    int w,
    int h,
    int delta_x = 0,
    int delta_y = 0 ) [virtual]
```

Prints a rectangular part of an on-screen window.

Parameters

<i>win</i>	The window from where to capture.
<i>x</i>	The rectangle left
<i>y</i>	The rectangle top
<i>w</i>	The rectangle width
<i>h</i>	The rectangle height
<i>delta</i> _↔ <i>_x</i>	Optional horizontal offset from current graphics origin where to print the captured rectangle.
<i>delta</i> _↔ <i>_y</i>	As above, vertically.

Reimplemented in [Fl_Printer](#).

9.93.3.10 printable_rect()

```
int Fl_Paged_Device::printable_rect (
    int * w,
    int * h ) [virtual]
```

Computes the width and height of the printable area of the page.

Values are in the same unit as that used by FLTK drawing functions, are unchanged by calls to [origin\(\)](#), but are changed by [scale\(\)](#) calls. Values account for the user-selected paper type and print orientation.

Returns

0 if OK, non-zero if any error

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.11 rotate()

```
void Fl_Paged_Device::rotate (
    float angle ) [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.12 scale()

```
void Fl_Paged_Device::scale (
    float scale_x,
    float scale_y = 0. ) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<code>scale_x</code>	Horizontal dimensions of plot are multiplied by this quantity.
<code>scale_y</code>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.13 start_job()

```
int Fl_Paged_Device::start_job (
    int pagecount,
    int * frompage = NULL,
    int * topage = NULL ) [virtual]
```

Starts a print job.

Parameters

in	<code>pagecount</code>	the total number of pages of the job (or 0 if you don't know the number of pages)
out	<code>frompage</code>	if non-null, <code>*frompage</code> is set to the first page the user wants printed
out	<code>topage</code>	if non-null, <code>*topage</code> is set to the last page the user wants printed

Returns

0 if OK, non-zero if any error

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), [Fl_Printer](#), and [Fl_PostScript_Printer](#).

9.93.3.14 start_page()

```
int Fl_Paged_Device::start_page (
    void ) [virtual]
```

Starts a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area.

Returns

0 if OK, non-zero if any error

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.15 translate()

```
void Fl_Paged_Device::translate (
    int x,
    int y ) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

This function is only useful after a [rotate\(\)](#) call. Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

9.93.3.16 untranslate()

```
void Fl_Paged_Device::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented in [Fl_PostScript_File_Device](#), [Fl_System_Printer](#), and [Fl_Printer](#).

The documentation for this class was generated from the following files:

- [Fl_Paged_Device.H](#)
- [Fl_Paged_Device.cxx](#)

9.94 FI_Pixmap Class Reference

The [Fl_Pixmap](#) class supports caching and drawing of colormap (pixmap) images, including transparency.

```
#include <Fl_Pixmap.H>
```

Inheritance diagram for [Fl_Pixmap](#):

Public Member Functions

- virtual void [color_average](#) ([Fl_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [Fl_Image](#) * [copy](#) ()
- virtual [Fl_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- [Fl_Pixmap](#) (char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) (const char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) (const uchar *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) (uchar *const *D)
The constructors create a new pixmap from the specified XPM data.
- virtual void [label](#) ([Fl_Menu_Item](#) *m)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [label](#) ([Fl_Widget](#) *w)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.
- virtual ~[Fl_Pixmap](#) ()
The destructor frees all memory and server resources that are used by the pixmap.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const
Returns the current image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- void [draw](#) (int X, int Y)
Draws the image.
- int [fail](#) ()
Returns a value that is not 0 if there is currently no image available.
- [FI_Image](#) (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int [h](#) () const
Returns the current image height in pixels.
- void [inactive](#) ()
The [inactive\(\)](#) method calls `color_average(FL_BACKGROUND_COLOR, 0.33f)` to produce an image that appears grayed out.
- int [ld](#) () const
Returns the current line data size in bytes.
- int [w](#) () const
Returns the current image width in pixels.
- virtual [~FI_Image](#) ()
The destructor is a virtual method that frees all memory used by the image.

Public Attributes

- int [alloc_data](#)

Protected Member Functions

- void [measure](#) ()

Protected Member Functions inherited from [FI_Image](#)

- void [d](#) (int D)
Sets the current image depth.
- void [data](#) (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void [draw_empty](#) (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- void [h](#) (int H)
Sets the current image height in pixels.
- void [ld](#) (int LD)
Sets the current line data size in bytes.
- void [w](#) (int W)
Sets the current image width in pixels.

9.94.1 Detailed Description

The [FI_Pixmap](#) class supports caching and drawing of colormap (pixmap) images, including transparency.

9.94.2 Constructor & Destructor Documentation

9.94.2.1 [FI_Pixmap\(\)](#) [1/4]

```
FI_Pixmap::FI_Pixmap (
    char *const * D ) [inline], [explicit]
```

The constructors create a new pixmap from the specified XPM data.

9.94.2.2 [FI_Pixmap\(\)](#) [2/4]

```
FI_Pixmap::FI_Pixmap (
    uchar *const * D ) [inline], [explicit]
```

The constructors create a new pixmap from the specified XPM data.

9.94.2.3 [FI_Pixmap\(\)](#) [3/4]

```
FI_Pixmap::FI_Pixmap (
    const char *const * D ) [inline], [explicit]
```

The constructors create a new pixmap from the specified XPM data.

9.94.2.4 Fl_Pixmap() [4/4]

```
Fl_Pixmap::Fl_Pixmap (
    const uchar *const * D ) [inline], [explicit]
```

The constructors create a new pixmap from the specified XPM data.

9.94.3 Member Function Documentation

9.94.3.1 color_average()

```
void Fl_Pixmap::color_average (
    Fl_Color c,
    float i ) [virtual]
```

The `color_average()` method averages the colors in the image with the FLTK color value `c`.

The `i` argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from [Fl_Image](#).

9.94.3.2 copy()

```
Fl_Image * Fl_Pixmap::copy (
    int W,
    int H ) [virtual]
```

The `copy()` method creates a copy of the specified image.

If the width and height are provided, the image is resized to the specified size. The image should be deleted (or in the case of [Fl_Shared_Image](#), released) when you are done with it.

Reimplemented from [Fl_Image](#).

9.94.3.3 desaturate()

```
void Fl_Pixmap::desaturate ( ) [virtual]
```

The `desaturate()` method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from [Fl_Image](#).

9.94.3.4 draw()

```
void Fl_Pixmap::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0 ) [virtual]
```

Draws the image with a bounding box.

Arguments `X`, `Y`, `W`, `H` specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the `cx` and `cy` arguments.

In other words: `fl_push_clip(X,Y,W,H)` is applied, the image is drawn with its upper-left corner at `X-cx`, `Y-cy` and its own width and height, `fl_pop_clip()` is applied.

Reimplemented from [Fl_Image](#).

9.94.3.5 label() [1/2]

```
void Fl_Pixmap::label (
    Fl_Menu_Item * m ) [virtual]
```

The `label()` methods are an obsolete way to set the image attribute of a widget or menu item.

Use the `image()` or `deimage()` methods of the `FI_Widget` and `FI_Menu_Item` classes instead. Reimplemented from `FI_Image`.

9.94.3.6 `label()` [2/2]

```
void FI_Pixmap::label (
    FI_Widget * widget ) [virtual]
```

The `label()` methods are an obsolete way to set the image attribute of a widget or menu item. Use the `image()` or `deimage()` methods of the `FI_Widget` and `FI_Menu_Item` classes instead. Reimplemented from `FI_Image`.

9.94.3.7 `uncache()`

```
void FI_Pixmap::uncache ( ) [virtual]
```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented from `FI_Image`.

The documentation for this class was generated from the following files:

- `FI_Pixmap.H`
- `FI_Pixmap.cxx`

9.95 FI_Plugin Class Reference

`FI_Plugin` allows link-time and run-time integration of binary modules.

```
#include <FI_Plugin.H>
```

Inheritance diagram for `FI_Plugin`:

Public Member Functions

- `FI_Plugin` (`const char *klass, const char *name`)
Create a plugin.
- `virtual ~FI_Plugin ()`
Clear the plugin and remove it from the database.

9.95.1 Detailed Description

`FI_Plugin` allows link-time and run-time integration of binary modules.

`FI_Plugin` and `FI_Plugin_Manager` provide a small and simple solution for linking C++ classes at run-time, or optionally linking modules at compile time without the need to change the main application.

`FI_Plugin_Manager` uses static initialisation to create the plugin interface early during startup. Plugins are stored in a temporary database, organized in classes.

Plugins should derive a new class from `FI_Plugin` as a base:

```
class My_Plugin : public FI_Plugin {
public:
    My_Plugin() : FI_Plugin("effects", "blur") { }
    void do_something(...);
};
My_Plugin blur_plugin();
```

Plugins can be put into modules and either linked before distribution, or loaded from dynamically linkable files. An `FI_Plugin_Manager` is used to list and access all currently loaded plugins.

```
FI_Plugin_Manager mgr("effects");
int i, n = mgr.plugins();
for (i=0; i<n; i++) {
```

```
My_Plugin *pin = (My_Plugin*)mgr.plugin(i);
pin->do_something();
}
```

9.95.2 Constructor & Destructor Documentation

9.95.2.1 Fl_Plugin()

```
Fl_Plugin::Fl_Plugin (
    const char * klass,
    const char * name )
```

Create a plugin.

Parameters

in	<i>klass</i>	plugins are grouped in classes
in	<i>name</i>	every plugin should have a unique name

The documentation for this class was generated from the following files:

- Fl_Plugin.H
- Fl_Preferences.cxx

9.96 Fl_Plugin_Manager Class Reference

[Fl_Plugin_Manager](#) manages link-time and run-time plugin binaries.

```
#include <Fl_Plugin.H>
```

Inheritance diagram for Fl_Plugin_Manager:

Public Member Functions

- [Fl_Preferences::ID addPlugin](#) (const char *name, Fl_Plugin *plugin)
This function adds a new plugin to the database.
- [Fl_Plugin_Manager](#) (const char *klass)
Manage all plugins belonging to one class.
- [Fl_Plugin * plugin](#) (const char *name)
Return the address of a plugin by name.
- [Fl_Plugin * plugin](#) (int index)
Return the address of a plugin by index.
- int [plugins](#) ()
Return the number of plugins in the klass.
- [~Fl_Plugin_Manager](#) ()
Remove the plugin manager.

Public Member Functions inherited from [Fl_Preferences](#)

- char [clear](#) ()
Delete all groups and all entries.
- char [deleteAllEntries](#) ()

- Delete all entries.*

 - char **deleteAllGroups** ()

Delete all groups.
- char **deleteEntry** (const char *entry)

Deletes a single name/value pair.
- char **deleteGroup** (const char *group)

Deletes a group.
- int **entries** ()

Returns the number of entries (name/value pairs) in a group.
- const char * **entry** (int index)

Returns the name of an entry.
- char **entryExists** (const char *key)

Returns non-zero if an entry with this name exists.
- **FI_Preferences** (const char *path, const char *vendor, const char *application)

Use this constructor to create or read a preferences file at an arbitrary position in the file system.
- **FI_Preferences** (const **FI_Preferences** &)

Create another reference to a Preferences group.
- **FI_Preferences** (**FI_Preferences** &parent, const char *group)

Generate or read a new group of entries within another group.
- **FI_Preferences** (**FI_Preferences** &parent, int groupIndex)

Open a child group using a given index.
- **FI_Preferences** (**FI_Preferences** *parent, const char *group)

Create or access a group of preferences using a name.
- **FI_Preferences** (**FI_Preferences** *parent, int groupIndex)
- **FI_Preferences** (ID id)

Create a new dataset access point using a dataset ID.
- **FI_Preferences** (**Root** root, const char *vendor, const char *application)

The constructor creates a group that manages name/value pairs and child groups.
- void **flush** ()

Writes all preferences to disk.
- char **get** (const char *entry, char *&value, const char *defaultValue)

Reads an entry from the group.
- char **get** (const char *entry, char *value, const char *defaultValue, int maxSize)

Reads an entry from the group.
- char **get** (const char *entry, double &value, double defaultValue)

Reads an entry from the group.
- char **get** (const char *entry, float &value, float defaultValue)

Reads an entry from the group.
- char **get** (const char *entry, int &value, int defaultValue)

Reads an entry from the group.
- char **get** (const char *entry, void *&value, const void *defaultValue, int defaultSize)

Reads an entry from the group.
- char **get** (const char *entry, void *value, const void *defaultValue, int defaultSize, int maxSize)

Reads an entry from the group.
- char **getUserdataPath** (char *path, int pathlen)

Creates a path that is related to the preferences file and that is usable for additional application data.
- const char * **group** (int num_group)

Returns the name of the Nth (num_group) group.
- char **groupExists** (const char *key)

Returns non-zero if a group with this name exists.
- int **groups** ()

- Returns the number of groups that are contained within a group.*
- **ID** `id ()`

Return an ID that can later be reused to open more references to this dataset.
- `const char * name ()`

Return the name of this entry.
- `const char * path ()`

Return the full path to this entry.
- `char set (const char *entry, const char *value)`

Sets an entry (name/value pair).
- `char set (const char *entry, const void *value, int size)`

Sets an entry (name/value pair).
- `char set (const char *entry, double value)`

Sets an entry (name/value pair).
- `char set (const char *entry, double value, int precision)`

Sets an entry (name/value pair).
- `char set (const char *entry, float value)`

Sets an entry (name/value pair).
- `char set (const char *entry, float value, int precision)`

Sets an entry (name/value pair).
- `char set (const char *entry, int value)`

Sets an entry (name/value pair).
- `int size (const char *entry)`

Returns the size of the value part of an entry.
- `virtual ~FI_Preferences ()`

The destructor removes allocated resources.

Static Public Member Functions

- `static int load (const char *filename)`

Load a module from disk.
- `static int loadAll (const char *filepath, const char *pattern=0)`

Use this function to load a whole directory full of modules.
- `static void removePlugin (FI_Preferences::ID id)`

Remove any plugin.

Static Public Member Functions inherited from FI_Preferences

- `static const char * newUUID ()`

Returns a UUID as generated by the system.
- `static char remove (ID id_)`

Remove the group with this ID from a database.

Additional Inherited Members

Public Types inherited from FI_Preferences

- `typedef void * ID`

Every FI_Preferences-Group has a unique ID.
- `enum Root { SYSTEM =0 , USER }`

Define the scope of the preferences.

Protected Attributes inherited from [FI_Preferences](#)

- [Node](#) * node
- [RootNode](#) * rootNode

9.96.1 Detailed Description

[FI_Plugin_Manager](#) manages link-time and run-time plugin binaries.

See also

[FI_Plugin](#)

9.96.2 Constructor & Destructor Documentation

9.96.2.1 ~FI_Plugin_Manager()

```
Fl_Plugin_Manager::~Fl_Plugin_Manager ( )
```

Remove the plugin manager.

Calling this does not remove the database itself or any plugins. It just removes the reference to the database.

9.96.3 Member Function Documentation

9.96.3.1 addPlugin()

```
Fl_Preferences::ID Fl_Plugin_Manager::addPlugin (
    const char * name,
    Fl_Plugin * plugin )
```

This function adds a new plugin to the database.

There is no need to call this function explicitly. Every [FI_Plugin](#) constructor will call this function at initialization time.

9.96.3.2 load()

```
int Fl_Plugin_Manager::load (
    const char * filename ) [static]
```

Load a module from disk.

A module must be a dynamically linkable file for the given operating system. When loading a module, its +init function will be called which in turn calls the constructor of all statically initialized [FI_Plugin](#) classes and adds them to the database.

9.96.3.3 removePlugin()

```
void Fl_Plugin_Manager::removePlugin (
    Fl_Preferences::ID id ) [static]
```

Remove any plugin.

There is no need to call this function explicitly. Every [FI_Plugin](#) destructor will call this function at destruction time.

The documentation for this class was generated from the following files:

- [FI_Plugin.H](#)
- [FI_Preferences.cxx](#)

9.97 FI_PNG_Image Class Reference

The [FI_PNG_Image](#) class supports loading, caching, and drawing of Portable Network Graphics (PNG) image files.

```
#include <FI_PNG_Image.H>
```

Inheritance diagram for [FI_PNG_Image](#):

Public Member Functions

- [FI_PNG_Image](#) (const char *filename)
The constructor loads the named PNG image from the given png filename.
- [FI_PNG_Image](#) (const char *name_png, const unsigned char *buffer, int datasize)
Constructor that reads a PNG image from memory.

Public Member Functions inherited from [FI_RGB_Image](#)

- virtual void [color_average](#) ([FI_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [FI_Image](#) * [copy](#) ()
- virtual [FI_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=FL_GRAY)
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const uchar *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- virtual void [label](#) ([FI_Menu_Item](#) *m)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [label](#) ([FI_Widget](#) *w)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.
- virtual ~[FI_RGB_Image](#) ()
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const
Returns the current image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- void [draw](#) (int X, int Y)
Draws the image.

- int **fail** ()
Returns a value that is not 0 if there is currently no image available.
- **FI_Image** (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image height in pixels.
- void **inactive** ()
The `inactive()` method calls `color_average(FL_BACKGROUND_COLOR, 0.33f)` to produce an image that appears grayed out.
- int **ld** () const
Returns the current line data size in bytes.
- int **w** () const
Returns the current image width in pixels.
- virtual **~FI_Image** ()
The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from **FI_RGB_Image**

- static size_t **max_size** ()
Returns the maximum allowed image size in bytes when creating an `FI_RGB_Image` object.
- static void **max_size** (size_t size)
Sets the maximum allowed image size in bytes when creating an `FI_RGB_Image` object.

Static Public Member Functions inherited from **FI_Image**

- static **FI_RGB_Scaling** **RGB_scaling** ()
Returns the currently used RGB image scaling method.
- static void **RGB_scaling** (**FI_RGB_Scaling**)
Sets the RGB image scaling method used for `copy(int, int)`.

Public Attributes inherited from **FI_RGB_Image**

- int **alloc_array**
If non-zero, the object's data array is delete[]'d when deleting the object.
- const **uchar** * **array**
Points to the start of the object's data array.

Static Public Attributes inherited from **FI_Image**

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_NO_IMAGE** = -1

Protected Member Functions inherited from **FI_Image**

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method `draw_empty()` draws a box with an X in it.
- void **h** (int H)

- *Sets the current image height in pixels.*
- void **ld** (int LD)
 - *Sets the current line data size in bytes.*
- void **w** (int W)
 - *Sets the current image width in pixels.*

Static Protected Member Functions inherited from [FI_Image](#)

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

9.97.1 Detailed Description

The [FI_PNG_Image](#) class supports loading, caching, and drawing of Portable Network Graphics (PNG) image files. The class loads colormapped and full-color images and handles color- and alpha-based transparency.

9.97.2 Constructor & Destructor Documentation

9.97.2.1 [FI_PNG_Image](#)() [1/2]

```
FI_PNG_Image::FI_PNG_Image (
    const char * filename )
```

The constructor loads the named PNG image from the given png filename.

The destructor frees all memory and server resources that are used by the image.

Use [FI_Image::fail\(\)](#) to check if [FI_PNG_Image](#) failed to load. [fail\(\)](#) returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the PNG format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason.

Parameters

<code>in</code>	<code>filename</code>	Name of PNG file to read
-----------------	-----------------------	--------------------------

9.97.2.2 [FI_PNG_Image](#)() [2/2]

```
FI_PNG_Image::FI_PNG_Image (
    const char * name_png,
    const unsigned char * buffer,
    int maxsize )
```

Constructor that reads a PNG image from memory.

Construct an image from a block of memory inside the application. Fluid offers "binary Data" chunks as a great way to add image data into the C++ source code. `name_png` can be NULL. If a name is given, the image is added to the list of shared images (see: [FI_Shared_Image](#)) and will be available by that name.

Parameters

<code>name_png</code>	A name given to this image or NULL
<code>buffer</code>	Pointer to the start of the PNG image in memory
<code>maxsize</code>	Size in bytes of the memory buffer containing the PNG image

The documentation for this class was generated from the following files:

- [FI_PNG_Image.H](#)
- [FI_PNG_Image.cxx](#)

9.98 FI_PNM_Image Class Reference

The [FI_PNM_Image](#) class supports loading, caching, and drawing of Portable Anymap (PNM, PBM, PGM, PPM) image files.

```
#include <Fl_PNM_Image.H>
```

Inheritance diagram for [FI_PNM_Image](#):

Public Member Functions

- [FI_PNM_Image](#) (const char *filename)
The constructor loads the named PNM image.

Public Member Functions inherited from [FI_RGB_Image](#)

- virtual void [color_average](#) ([FI_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [FI_Image](#) * [copy](#) ()
- virtual [FI_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=FL_GRAY)
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const uchar *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- virtual void [label](#) ([FI_Menu_Item](#) *m)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [label](#) ([FI_Widget](#) *w)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.
- virtual ~[FI_RGB_Image](#) ()
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const
Returns the current image depth.

- `const char *const * data () const`
Returns a pointer to the current image data array.
- `void draw (int X, int Y)`
Draws the image.
- `int fail ()`
Returns a value that is not 0 if there is currently no image available.
- `FI_Image (int W, int H, int D)`
The constructor creates an empty image with the specified width, height, and depth.
- `int h () const`
Returns the current image height in pixels.
- `void inactive ()`
The `inactive()` method calls `color_average(FL_BACKGROUND_COLOR, 0.33f)` to produce an image that appears grayed out.
- `int ld () const`
Returns the current line data size in bytes.
- `int w () const`
Returns the current image width in pixels.
- `virtual ~FI_Image ()`
The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from [FI_RGB_Image](#)

- `static size_t max_size ()`
Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.
- `static void max_size (size_t size)`
Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

Static Public Member Functions inherited from [FI_Image](#)

- `static FI_RGB_Scaling RGB_scaling ()`
Returns the currently used RGB image scaling method.
- `static void RGB_scaling (FI_RGB_Scaling)`
Sets the RGB image scaling method used for `copy(int, int)`.

Public Attributes inherited from [FI_RGB_Image](#)

- `int alloc_array`
If non-zero, the object's data array is delete[]'d when deleting the object.
- `const uchar * array`
Points to the start of the object's data array.

Static Public Attributes inherited from [FI_Image](#)

- `static const int ERR_FILE_ACCESS = -2`
- `static const int ERR_FORMAT = -3`
- `static const int ERR_NO_IMAGE = -1`

Protected Member Functions inherited from FI_Image

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method `draw_empty()` draws a box with an X in it.
- void **h** (int H)
Sets the current image height in pixels.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the current image width in pixels.

Static Protected Member Functions inherited from FI_Image

- static void **labeltype** (const FI_Label *lo, int lx, int ly, int lw, int lh, FI_Align la)
- static void **measure** (const FI_Label *lo, int &lw, int &lh)

9.98.1 Detailed Description

The [FI_PNM_Image](#) class supports loading, caching, and drawing of Portable Anymap (PNM, PBM, PGM, PPM) image files.

The class loads bitmap, grayscale, and full-color images in both ASCII and binary formats.

9.98.2 Constructor & Destructor Documentation

9.98.2.1 FI_PNM_Image()

```
FI_PNM_Image::FI_PNM_Image (
    const char * name )
```

The constructor loads the named PNM image.

The destructor frees all memory and server resources that are used by the image.

Use [FI_Image::fail\(\)](#) to check if [FI_PNM_Image](#) failed to load. `fail()` returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the PNM format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason.

The documentation for this class was generated from the following files:

- FI_PNM_Image.H
- FI_PNM_Image.cxx

9.99 FI_Positioner Class Reference

This class is provided for Forms compatibility.

```
#include <FI_Positioner.H>
```

Inheritance diagram for FI_Positioner:

Public Member Functions

- [FL_Positioner](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
 - Creates a new FL_Positioner widget using the given position, size, and label string.*
- int [handle](#) (int)
 - Handles the specified event.*
- int [value](#) (double, double)
 - Returns the current position in *x* and *y*.*
- void [xbounds](#) (double, double)
 - Sets the X axis bounds.*
- double [xmaximum](#) () const
 - Gets the X axis maximum.*
- void [xmaximum](#) (double *a*)
 - Same as `xbounds(xminimum(), a)`*
- double [xminimum](#) () const
 - Gets the X axis minimum.*
- void [xminimum](#) (double *a*)
 - Same as `xbounds(a, xmaximum())`*
- void [xstep](#) (double *a*)
 - Sets the stepping value for the X axis.*
- double [xvalue](#) () const
 - Gets the X axis coordinate.*
- int [xvalue](#) (double)
 - Sets the X axis coordinate.*
- void [ybounds](#) (double, double)
 - Sets the Y axis bounds.*
- double [ymaximum](#) () const
 - Gets the Y axis maximum.*
- void [ymaximum](#) (double *a*)
 - Same as `ybounds(yminimum(), a)`*
- double [yminimum](#) () const
 - Gets the Y axis minimum.*
- void [yminimum](#) (double *a*)
 - Same as `ybounds(a, ymaximum())`*
- void [ystep](#) (double *a*)
 - Sets the stepping value for the Y axis.*
- double [yvalue](#) () const
 - Gets the Y axis coordinate.*
- int [yvalue](#) (double)
 - Sets the Y axis coordinate.*

Public Member Functions inherited from [FL_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
 - Activates the widget.*
- unsigned int [active](#) () const
 - Returns whether the widget is active.*
- int [active_r](#) () const
 - Returns whether the widget and all of its parents are active.*
- [FL_Align](#) [align](#) () const

- Gets the label alignment.*

 - void `align` (`FI_Align` alignment)

Sets the label alignment.
- long `argument` () const

Gets the current user data (long) argument that is passed to the callback function.

 - void `argument` (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_Gl_Window` * `as_gl_window` ()

Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual `FI_Group` * `as_group` ()

Returns an FI_Group pointer if this widget is an FI_Group.
- virtual `FI_Window` * `as_window` ()

Returns an FI_Window pointer if this widget is an FI_Window.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, void *p)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback0` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FI_Color` bg)

Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)

Sets the background and selection color of the widget.
- `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.

- int `contains` (const `FL_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- uchar `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * deimage` () const
- void `deimage` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype a`, const char *b)

- Shortcut to set the label text and type in one call.*
- [FI_Color](#) `labelcolor` () const
Gets the label color.
 - void `labelcolor` ([FI_Color](#) c)
Sets the label color.
 - [FI_Font](#) `labelfont` () const
Gets the font to use.
 - void `labelfont` ([FI_Font](#) f)
Sets the font to use.
 - [FI_Fontsize](#) `labelsize` () const
Gets the font size in pixels.
 - void `labelsize` ([FI_Fontsize](#) pix)
Sets the font size in pixels.
 - [FI_Labeltype](#) `labeltype` () const
Gets the label type.
 - void `labeltype` ([FI_Labeltype](#) a)
Sets the label type.
 - void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
 - unsigned int `output` () const
Returns if a widget is used for output only.
 - [FI_Group](#) * `parent` () const
Returns a pointer to the parent widget.
 - void `parent` ([FI_Group](#) *p)
Internal use only - "for hacks only".
 - void `position` (int X, int Y)
Repositions the window or widget.
 - void `redraw` ()
Schedules the drawing of the widget.
 - void `redraw_label` ()
Schedules the drawing of the label.
 - virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
 - [FI_Color](#) `selection_color` () const
Gets the selection color.
 - void `selection_color` ([FI_Color](#) a)
Sets the selection color.
 - void `set_active` ()
Marks the widget as active without sending events or changing focus.
 - void `set_changed` ()
Marks the value of the widget as changed.
 - void `set_output` ()
Sets a widget to output only.
 - void `set_visible` ()
Makes the widget visible.
 - void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
 - virtual void `show` ()
Makes a widget visible.
 - void `size` (int W, int H)
Changes the size of the widget.

- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `Fl_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- uchar `type` () const
Gets the widget type.
- void `type` (uchar t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `Fl_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `Fl_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~Fl_Widget` ()
Destroys the widget.

Protected Member Functions

- void `draw` ()
Draws the widget.
- void `draw` (int, int, int, int)
- int `handle` (int, int, int, int, int)

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
 - [INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
 - [FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 - ,
 - [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 - ,
 - [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 - ,
 - [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#) = 1<<19 ,
 - [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

9.99.1 Detailed Description

This class is provided for Forms compatibility.

It provides 2D input. It would be useful if this could be put atop another widget so that the crosshairs are on top, but this is not implemented. The color of the crosshairs is [selection_color\(\)](#).

P

Figure 9.24 [Fl_Positioner](#)

9.99.2 Constructor & Destructor Documentation

9.99.2.1 [Fl_Positioner\(\)](#)

```
Fl_Positioner::Fl_Positioner (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [Fl_Positioner](#) widget using the given position, size, and label string. The default boxtype is `FL_NO_BOX`.

9.99.3 Member Function Documentation

9.99.3.1 [draw\(\)](#)

```
void Fl_Positioner::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                          // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

9.99.3.2 handle()

```
int Fl_Positioner::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget. When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise. Most of the time, you want to call the inherited handle() method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

- Fl_Positioner.cxx

9.100 Fl_PostScript_File_Device Class Reference

To send graphical output to a PostScript file.

```
#include <Fl_PostScript.H>
```

Inheritance diagram for Fl_PostScript_File_Device:

Public Member Functions

- const char * [class_name](#) ()
Returns the name of the class of this object.
- void [end_job](#) (void)
To be called at the end of a print job.
- int [end_page](#) (void)
To be called at the end of each page.

- **FI_PostScript_File_Device** ()
The constructor.
- void **margins** (int *left, int *top, int *right, int *bottom)
Computes the dimensions of margins that lie between the printable page area and the full page.
- void **origin** (int *x, int *y)
Computes the page coordinates of the current origin of graphics functions.
- void **origin** (int x, int y)
Sets the position in page coordinates of the origin of graphics functions.
- int **printable_rect** (int *w, int *h)
Computes the width and height of the printable area of the page.
- void **rotate** (float angle)
Rotates the graphics operations relatively to paper.
- void **scale** (float scale_x, float scale_y=0.)
Changes the scaling of page coordinates.
- int **start_job** (FILE *ps_output, int pagecount, enum **FI_Paged_Device::Page_Format** format=**FI_Paged_Device::A4**, enum **FI_Paged_Device::Page_Layout** layout=**FI_Paged_Device::PORTRAIT**)
Begins the session where all graphics requests will go to FILE pointer.
- int **start_job** (int pagecount, enum **FI_Paged_Device::Page_Format** format=**FI_Paged_Device::A4**, enum **FI_Paged_Device::Page_Layout** layout=**FI_Paged_Device::PORTRAIT**)
Begins the session where all graphics requests will go to a local PostScript file.
- int **start_job** (int pagecount, int *from, int *to)
Don't use with this class.
- int **start_page** (void)
Starts a new printed page.
- void **translate** (int x, int y)
Translates the current graphics origin accounting for the current rotation.
- void **untranslate** (void)
*Undoes the effect of a previous **translate()** call.*
- **~FI_PostScript_File_Device** ()
The destructor.

Public Member Functions inherited from **FI_Paged_Device**

- virtual void **print_widget** (**FI_Widget** *widget, int delta_x=0, int delta_y=0)
Draws the widget on the printed page.
- void **print_window** (**FI_Window** *win, int x_offset=0, int y_offset=0)
Prints a window with its title bar and frame if any.
- virtual void **print_window_part** (**FI_Window** *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
Prints a rectangular part of an on-screen window.
- virtual **~FI_Paged_Device** ()
The destructor.

Public Member Functions inherited from **FI_Surface_Device**

- const char * **class_name** ()
Returns the name of the class of this object.
- **FI_Graphics_Driver** * **driver** ()
Returns the graphics driver of this drawing surface.
- void **driver** (**FI_Graphics_Driver** *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void **set_current** (void)
Make this surface the current drawing surface.
- virtual **~FI_Surface_Device** ()
The destructor.

Public Member Functions inherited from FI_Device

- virtual `~FI_Device ()`
Virtual destructor.

Static Public Attributes

- static const char * `class_id` = "FI_PostScript_File_Device"
- static const char * `file_chooser_title` = "Select a .ps file"
Label of the PostScript file chooser window.

Static Public Attributes inherited from FI_Paged_Device

- static const char * `class_id` = "FI_Paged_Device"
- static const `page_format page_formats` [NO_PAGE_FORMATS]
width, height and name of all elements of the enum `Page_Format`.

Static Public Attributes inherited from FI_Surface_Device

- static const char * `class_id` = "FI_Surface_Device"

Static Public Attributes inherited from FI_Device

- static const char * `class_id` = "FI_Device"
A string that identifies each subclass of `FI_Device`.

Protected Member Functions

- `FI_PostScript_Graphics_Driver * driver ()`
Returns the PostScript driver of this drawing surface.

Protected Member Functions inherited from FI_Paged_Device

- `FI_Paged_Device ()`
The constructor.

Protected Member Functions inherited from FI_Surface_Device

- `FI_Surface_Device (FI_Graphics_Driver *graphics_driver)`
Constructor that sets the graphics driver to use for the created surface.

Additional Inherited Members

Public Types inherited from FI_Paged_Device

- enum `Page_Format` {
A0 = 0 , A1 , A2 , A3 ,
A4 , A5 , A6 , A7 ,
A8 , A9 , B0 , B1 ,
B2 , B3 , B4 , B5 ,
B6 , B7 , B8 , B9 ,
B10 , C5E , DLE , EXECUTIVE ,
FOLIO , LEDGER , LEGAL , LETTER ,
TABLOID , ENVELOPE , MEDIA = 0x1000 }
Possible page formats.
- enum `Page_Layout` { PORTRAIT = 0 , LANDSCAPE = 0x100 , REVERSED = 0x200 , ORIENTATION = 0x300 }
Possible page layouts.

Static Public Member Functions inherited from [Fl_Surface_Device](#)

- static [Fl_Surface_Device](#) * [surface](#) ()

The current drawing surface.

Protected Attributes inherited from [Fl_Paged_Device](#)

- int [x_offset](#)
horizontal offset to the origin of graphics coordinates
- int [y_offset](#)
vertical offset to the origin of graphics coordinates

9.100.1 Detailed Description

To send graphical output to a PostScript file.

This class is used exactly as the [Fl_Printer](#) class except for the [start_job\(\)](#) call, two variants of which are usable and allow to specify what page format and layout are desired.

9.100.2 Member Function Documentation

9.100.2.1 [class_name\(\)](#)

```
const char * Fl_PostScript_File_Device::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the [class_name\(\)](#) function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an [Fl_Device](#) subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_Paged_Device](#).

Reimplemented in [Fl_PostScript_Printer](#).

9.100.2.2 [end_job\(\)](#)

```
void Fl_PostScript_File_Device::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented from [Fl_Paged_Device](#).

9.100.2.3 [end_page\(\)](#)

```
int Fl_PostScript_File_Device::end_page (
    void ) [virtual]
```

To be called at the end of each page.

Returns

0 if OK, non-zero if any error.

Reimplemented from [Fl_Paged_Device](#).

9.100.2.4 [margins\(\)](#)

```
void Fl_PostScript_File_Device::margins (
    int * left,
    int * top,
    int * right,
    int * bottom ) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by [scale\(\)](#) calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented from [Fl_Paged_Device](#).

9.100.2.5 origin() [1/2]

```
void Fl_PostScript_File_Device::origin (
    int * x,
    int * y ) [virtual]
```

Computes the page coordinates of the current origin of graphics functions.

Parameters

out	<i>x</i>	If non-null, *x is set to the horizontal page offset of graphics origin.
out	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.100.2.6 origin() [2/2]

```
void Fl_PostScript_File_Device::origin (
    int x,
    int y ) [virtual]
```

Sets the position in page coordinates of the origin of graphics functions.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the page printable area. Origin() calls are not affected by [rotate\(\)](#) calls. Successive [origin\(\)](#) calls don't combine their effects.

Parameters

in	<i>x</i>	Horizontal position in page coordinates of the desired origin of graphics functions.
in	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.100.2.7 printable_rect()

```
int Fl_PostScript_File_Device::printable_rect (
    int * w,
    int * h ) [virtual]
```

Computes the width and height of the printable area of the page.

Values are in the same unit as that used by FLTK drawing functions, are unchanged by calls to [origin\(\)](#), but are changed by [scale\(\)](#) calls. Values account for the user-selected paper type and print orientation.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.100.2.8 rotate()

```
void Fl_PostScript_File_Device::rotate (
    float angle ) [virtual]
```

Rotates the graphics operations relatively to paper.
The rotation is centered on the current graphics origin. Successive `rotate()` calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented from [Fl_Paged_Device](#).

9.100.2.9 `scale()`

```
void Fl_PostScript_File_Device::scale (
    float scale_x,
    float scale_y = 0. ) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a `scale()` call, do a `printable_rect()` call to get the new dimensions of the printable page area. Successive `scale()` calls don't combine their effects.

Parameters

<i>scale_x</i>	Horizontal dimensions of plot are multiplied by this quantity.
<i>scale_y</i>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented from [Fl_Paged_Device](#).

9.100.2.10 `start_job()` [1/3]

```
int Fl_PostScript_File_Device::start_job (
    FILE * ps_output,
    int pagecount,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT )
```

Begins the session where all graphics requests will go to FILE pointer.

Parameters

<i>ps_output</i>	A writable FILE pointer that will receive PostScript output and that should not be closed until after <code>end_job()</code> has been called.
<i>pagecount</i>	The total number of pages to be created. Use 0 if this number is unknown when this function is called.
<i>format</i>	Desired page format.
<i>layout</i>	Desired page layout.

Returns

always 0.

9.100.2.11 `start_job()` [2/3]

```
int Fl_PostScript_File_Device::start_job (
    int pagecount,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT )
```

Begins the session where all graphics requests will go to a local PostScript file.

Opens a file dialog entitled with `FI_PostScript_File_Device::file_chooser_title` to select an output PostScript file.

Parameters

<i>pagecount</i>	The total number of pages to be created. Use 0 if this number is unknown when this function is called.
<i>format</i>	Desired page format.
<i>layout</i>	Desired page layout.

Returns

0 if OK, 1 if user cancelled the file dialog, 2 if fopen failed on user-selected output file.

9.100.2.12 start_job() [3/3]

```
int Fl_PostScript_File_Device::start_job (
    int pagecount,
    int * from,
    int * to ) [virtual]
```

Don't use with this class.

Reimplemented from [FI_Paged_Device](#).

Reimplemented in [FI_PostScript_Printer](#).

9.100.2.13 start_page()

```
int Fl_PostScript_File_Device::start_page (
    void ) [virtual]
```

Starts a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area.

Returns

0 if OK, non-zero if any error

Reimplemented from [FI_Paged_Device](#).

9.100.2.14 translate()

```
void Fl_PostScript_File_Device::translate (
    int x,
    int y ) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

This function is only useful after a [rotate\(\)](#) call. Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call.

Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [FI_Paged_Device](#).

9.100.2.15 untranslate()

```
void Fl_PostScript_File_Device::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [FI_Paged_Device](#).

The documentation for this class was generated from the following files:

Protected Attributes inherited from [Fl_Graphics_Driver](#)

- `matrix * fl_matrix`

Points to the current coordinate transformation matrix.

9.101.1 Detailed Description

PostScript graphical backend.

PostScript text uses vectorial fonts when using the FLTK standard fonts

and the latin alphabet or a few other characters listed in the following table. The latin alphabet means all unicode characters between U+0020 and U+017F, or, in other words, the ASCII, Latin-1 Supplement and Latin Extended-A charts.

Char	Code-point	Name	Char	Code-point	Name	Char	Code-point	Name
<i>f</i>	U+0192	florin	,	U+201A	quotesinglbase™		U+2122	trademark
^	U+02C6	circumflex	“	U+201C	quotedbleft		U+2202	partialdiff
ˇ	U+02C7	caron	”	U+201D	quotedbright		U+2206	Delta
˘	U+02D8	breve	„	U+201E	quotedblbase		U+2211	summation
˙	U+02D9	dotaccent	†	U+2020	dagger		U+221A	radical
	U+02DA	ring	‡	U+2021	daggerdbl		U+221E	infinity
˘	U+02DB	ogonek	•	U+2022	bullet		U+2260	notequal
~	U+02DC	tilde	...	U+2026	ellipsis		U+2264	lessequal
”	U+02DD	hungarumlaut	‰	U+2030	perthousand		U+2265	greaterequal
–	U+2013	endash	◀	U+2039	guilsinglleft		U+25CA	lozenge
—	U+2014	emdash	▶	U+203A	guilsinglright	fi	U+FB01	fi
‘	U+2018	quoteleft	/	U+2044	fraction	fl	U+FB02	fl
’	U+2019	quoteright	€	U+20AC	Euro		U+F8FF	apple (Mac OS only)

All other unicode characters or all other fonts (FL_FREE_FONT and above) are output as a bitmap. FLTK standard fonts are output using the corresponding PostScript standard fonts.

9.101.2 Member Function Documentation

9.101.2.1 `arc()` [1/2]

```
void Fl_PostScript_Graphics_Driver::arc (
    double x,
    double y,
    double r,
    double start,
    double end ) [virtual]
```

see [fl_arc\(double x, double y, double r, double start, double end\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.2 `arc()` [2/2]

```
void Fl_PostScript_Graphics_Driver::arc (
    int x,
    int y,
    int w,
    int h,
    double a1,
    double a2 ) [virtual]
```

see [fl_arc\(int x, int y, int w, int h, double a1, double a2\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.3 begin_complex_polygon()

```
void Fl_PostScript_Graphics_Driver::begin_complex_polygon ( ) [inline], [virtual]
```

see [fl_begin_complex_polygon\(\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.4 begin_line()

```
void Fl_PostScript_Graphics_Driver::begin_line ( ) [virtual]
```

see [fl_begin_line\(\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.5 begin_loop()

```
void Fl_PostScript_Graphics_Driver::begin_loop ( ) [virtual]
```

see [fl_begin_loop\(\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.6 begin_points()

```
void Fl_PostScript_Graphics_Driver::begin_points ( ) [virtual]
```

see [fl_begin_points\(\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.7 begin_polygon()

```
void Fl_PostScript_Graphics_Driver::begin_polygon ( ) [virtual]
```

see [fl_begin_polygon\(\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.8 circle()

```
void Fl_PostScript_Graphics_Driver::circle (
    double x,
    double y,
    double r ) [virtual]
```

see [fl_circle\(double x, double y, double r\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.9 class_name()

```
const char * Fl_PostScript_Graphics_Driver::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.
Use of the [class_name\(\)](#) function is discouraged because it will be removed from future FLTK versions.
The class of an instance of an [Fl_Device](#) subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.10 clip_box()

```
int Fl_PostScript_Graphics_Driver::clip_box (
    int x,
    int y,
    int w,
    int h,
    int & X,
    int & Y,
```

```
int & W,
int & H ) [virtual]
```

see [fl_clip_box\(int x, int y, int w, int h, int &X, int &Y, int &W, int &H\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.11 clocale_printf()

```
int Fl_PostScript_Graphics_Driver::clocale_printf (
    const char * format,
    ... )
```

Shields output PostScript data from modifications of the current locale.

It typically avoids PostScript errors caused if the current locale uses comma instead of dot as "decimal point".

Parameters

<i>format</i>	directives controlling output PostScript data
---------------	---

Returns

value returned by `vfprintf()` call

9.101.2.12 color() [1/2]

```
void Fl_PostScript_Graphics_Driver::color (
    Fl_Color c ) [virtual]
```

see [fl_color\(Fl_Color c\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.13 color() [2/2]

```
void Fl_PostScript_Graphics_Driver::color (
    uchar r,
    uchar g,
    uchar b ) [virtual]
```

see [fl_color\(uchar r, uchar g, uchar b\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.14 curve()

```
void Fl_PostScript_Graphics_Driver::curve (
    double X0,
    double Y0,
    double X1,
    double Y1,
    double X2,
    double Y2,
    double X3,
    double Y3 ) [virtual]
```

see [fl_curve\(double X0, double Y0, double X1, double Y1, double X2, double Y2, double X3, double Y3\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.15 descent()

```
int Fl_PostScript_Graphics_Driver::descent ( ) [virtual]
```

see [fl_descent\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.16 draw() [1/5]

```
void Fl_PostScript_Graphics_Driver::draw (
    const char * str,
    int n,
    int x,
    int y ) [inline], [virtual]
```

see [fl_draw\(const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.17 draw() [2/5]

```
void Fl_PostScript_Graphics_Driver::draw (
    Fl_Bitmap * bm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Bitmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.18 draw() [3/5]

```
void Fl_PostScript_Graphics_Driver::draw (
    Fl_Pixmap * pxm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Pixmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.19 draw() [4/5]

```
void Fl_PostScript_Graphics_Driver::draw (
    Fl_RGB_Image * rgb,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_RGB_Image](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.20 draw() [5/5]

```
void Fl_PostScript_Graphics_Driver::draw (
    int angle,
```

```
    const char * str,  
    int n,  
    int x,  
    int y ) [virtual]
```

see [fl_draw\(int angle, const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.21 draw_image() [1/2]

```
void Fl_PostScript_Graphics_Driver::draw_image (  
    const uchar * buf,  
    int X,  
    int Y,  
    int W,  
    int H,  
    int D = 3,  
    int L = 0 ) [virtual]
```

see [fl_draw_image\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.22 draw_image() [2/2]

```
void Fl_PostScript_Graphics_Driver::draw_image (  
    Fl_Draw_Image_Cb cb,  
    void * data,  
    int X,  
    int Y,  
    int W,  
    int H,  
    int D = 3 ) [virtual]
```

see [fl_draw_image\(Fl_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.23 draw_image_mono() [1/2]

```
void Fl_PostScript_Graphics_Driver::draw_image_mono (  
    const uchar * buf,  
    int X,  
    int Y,  
    int W,  
    int H,  
    int D = 1,  
    int L = 0 ) [virtual]
```

see [fl_draw_image_mono\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.24 draw_image_mono() [2/2]

```
void Fl_PostScript_Graphics_Driver::draw_image_mono (  
    Fl_Draw_Image_Cb cb,  
    void * data,  
    int X,  
    int Y,  
    int W,  
    int H,  
    int D = 1 ) [virtual]
```

see [fl_draw_image_mono\(Fl_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.25 draw_scaled()

```
int Fl_PostScript_Graphics_Driver::draw_scaled (
    Fl_Image * img,
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Draws an [Fl_Image](#) scaled to width *W* & height *H* with top-left corner at *X,Y*.

Returns

zero when the graphics driver doesn't implement scaled drawing, non-zero if it does implement it.

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.26 end_complex_polygon()

```
void Fl_PostScript_Graphics_Driver::end_complex_polygon ( ) [inline], [virtual]
see fl\_end\_complex\_polygon\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.27 end_line()

```
void Fl_PostScript_Graphics_Driver::end_line ( ) [virtual]
see fl\_end\_line\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.28 end_loop()

```
void Fl_PostScript_Graphics_Driver::end_loop ( ) [virtual]
see fl\_end\_loop\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.29 end_points()

```
void Fl_PostScript_Graphics_Driver::end_points ( ) [virtual]
see fl\_end\_points\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.30 end_polygon()

```
void Fl_PostScript_Graphics_Driver::end_polygon ( ) [virtual]
see fl\_end\_polygon\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.31 font()

```
void Fl_PostScript_Graphics_Driver::font (
    int face,
    int fsize ) [virtual]
```

see [fl_font\(Fl_Font face, Fl_Fontsize size\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.32 gap()

```
void Fl_PostScript_Graphics_Driver::gap ( ) [inline], [virtual]
see fl\_gap\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.33 height()

```
int Fl_PostScript_Graphics_Driver::height ( ) [virtual]
```

see [fl_height\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.34 line() [1/2]

```
void Fl_PostScript_Graphics_Driver::line (
    int x,
    int y,
    int x1,
    int y1 ) [virtual]
```

see [fl_line\(int x, int y, int x1, int y1\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.35 line() [2/2]

```
void Fl_PostScript_Graphics_Driver::line (
    int x,
    int y,
    int x1,
    int y1,
    int x2,
    int y2 ) [virtual]
```

see [fl_line\(int x, int y, int x1, int y1, int x2, int y2\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.36 line_style()

```
void Fl_PostScript_Graphics_Driver::line_style (
    int style,
    int width = 0,
    char * dashes = 0 ) [virtual]
```

see [fl_line_style\(int style, int width, char* dashes\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.37 loop() [1/2]

```
void Fl_PostScript_Graphics_Driver::loop (
    int x0,
    int y0,
    int x1,
    int y1,
    int x2,
    int y2 ) [virtual]
```

see [fl_loop\(int x0, int y0, int x1, int y1, int x2, int y2\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.38 loop() [2/2]

```
void Fl_PostScript_Graphics_Driver::loop (
    int x0,
    int y0,
    int x1,
    int y1,
    int x2,
    int y2,
    int x3,
    int y3 ) [virtual]
```

see [fl_loop\(int x0, int y0, int x1, int y1, int x2, int y2, int x3, int y3\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.39 not_clipped()

```
int Fl_PostScript_Graphics_Driver::not_clipped (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

see [fl_not_clipped\(int x, int y, int w, int h\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.40 pie()

```
void Fl_PostScript_Graphics_Driver::pie (
    int x,
    int y,
    int w,
    int h,
    double a1,
    double a2 ) [virtual]
```

see [fl_pie\(int x, int y, int w, int h, double a1, double a2\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.41 point()

```
void Fl_PostScript_Graphics_Driver::point (
    int x,
    int y ) [virtual]
```

see [fl_point\(int x, int y\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.42 polygon() [1/2]

```
void Fl_PostScript_Graphics_Driver::polygon (
    int x0,
    int y0,
    int x1,
    int y1,
    int x2,
    int y2 ) [virtual]
```

see [fl_polygon\(int x0, int y0, int x1, int y1, int x2, int y2\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.43 polygon() [2/2]

```
void Fl_PostScript_Graphics_Driver::polygon (
    int x0,
    int y0,
    int x1,
    int y1,
    int x2,
    int y2,
    int x3,
    int y3 ) [virtual]
```

see [fl_polygon\(int x0, int y0, int x1, int y1, int x2, int y2, int x3, int y3\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.44 pop_clip()

```
void Fl_PostScript_Graphics_Driver::pop_clip ( ) [virtual]
```

see [fl_pop_clip\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.45 push_clip()

```
void Fl_PostScript_Graphics_Driver::push_clip (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

see [fl_push_clip\(int x, int y, int w, int h\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.46 push_no_clip()

```
void Fl_PostScript_Graphics_Driver::push_no_clip ( ) [virtual]
```

see [fl_push_no_clip\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.47 rect()

```
void Fl_PostScript_Graphics_Driver::rect (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

see [fl_rect\(int x, int y, int w, int h\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.48 rectf()

```
void Fl_PostScript_Graphics_Driver::rectf (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

see [fl_rectf\(int x, int y, int w, int h\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.49 rtl_draw()

```
void Fl_PostScript_Graphics_Driver::rtl_draw (
    const char * str,
    int n,
    int x,
    int y ) [virtual]
```

see [fl_rtl_draw\(const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.50 text_extents()

```
void Fl_PostScript_Graphics_Driver::text_extents (
    const char * t,
    int n,
    int & dx,
    int & dy,
```

```
int & w,  
int & h ) [virtual]
```

see [fl_text_extents\(const char*, int n, int& dx, int& dy, int& w, int& h\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.51 transformed_vertex()

```
void Fl_PostScript_Graphics_Driver::transformed_vertex (  
    double xf,  
    double yf ) [virtual]
```

see [fl_transformed_vertex\(double xf, double yf\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.52 vertex()

```
void Fl_PostScript_Graphics_Driver::vertex (  
    double x,  
    double y ) [virtual]
```

see [fl_vertex\(double x, double y\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.53 width() [1/2]

```
double Fl_PostScript_Graphics_Driver::width (  
    const char * str,  
    int n ) [virtual]
```

see [fl_width\(const char *str, int n\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.54 width() [2/2]

```
double Fl_PostScript_Graphics_Driver::width (  
    unsigned int c ) [virtual]
```

see [fl_width\(unsigned int n\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.55 xyline() [1/3]

```
void Fl_PostScript_Graphics_Driver::xyline (  
    int x,  
    int y,  
    int x1 ) [virtual]
```

see [fl_xyline\(int x, int y, int x1\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.56 xyline() [2/3]

```
void Fl_PostScript_Graphics_Driver::xyline (  
    int x,  
    int y,  
    int x1,  
    int y2 ) [virtual]
```

see [fl_xyline\(int x, int y, int x1, int y2\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.101.2.57 xyline() [3/3]

```
void Fl_PostScript_Graphics_Driver::xyline (  
    int x,
```

```
        int y,  
        int x1,  
        int y2,  
        int x3 ) [virtual]
```

see [fl_xyline\(int x, int y, int x1, int y2, int x3\)](#).

Reimplemented from [FI_Graphics_Driver](#).

9.101.2.58 [yxline\(\)](#) [1/3]

```
void Fl_PostScript_Graphics_Driver::yxline (  
        int x,  
        int y,  
        int y1 ) [virtual]
```

see [fl_yxline\(int x, int y, int y1\)](#).

Reimplemented from [FI_Graphics_Driver](#).

9.101.2.59 [yxline\(\)](#) [2/3]

```
void Fl_PostScript_Graphics_Driver::yxline (  
        int x,  
        int y,  
        int y1,  
        int x2 ) [virtual]
```

see [fl_yxline\(int x, int y, int y1, int x2\)](#).

Reimplemented from [FI_Graphics_Driver](#).

9.101.2.60 [yxline\(\)](#) [3/3]

```
void Fl_PostScript_Graphics_Driver::yxline (  
        int x,  
        int y,  
        int y1,  
        int x2,  
        int y3 ) [virtual]
```

see [fl_yxline\(int x, int y, int y1, int x2, int y3\)](#).

Reimplemented from [FI_Graphics_Driver](#).

- [FI_PostScript.cxx](#)

9.102 [FI_PostScript_Printer](#) Class Reference

Print support under Unix/Linux.

```
#include <Fl_Printer.H>
```

Inheritance diagram for [FI_PostScript_Printer](#):

Public Member Functions

- const char * [class_name](#) ()
Returns the name of the class of this object.
- int [start_job](#) (int pages, int *firstpage=NULL, int *lastpage=NULL)
Starts a print job.

Public Member Functions inherited from [FI_PostScript_File_Device](#)

- void [end_job](#) (void)
To be called at the end of a print job.
- int [end_page](#) (void)
To be called at the end of each page.
- **FI_PostScript_File_Device** ()
The constructor.
- void [margins](#) (int *left, int *top, int *right, int *bottom)
Computes the dimensions of margins that lie between the printable page area and the full page.
- void [origin](#) (int *x, int *y)
Computes the page coordinates of the current origin of graphics functions.
- void [origin](#) (int x, int y)
Sets the position in page coordinates of the origin of graphics functions.
- int [printable_rect](#) (int *w, int *h)
Computes the width and height of the printable area of the page.
- void [rotate](#) (float angle)
Rotates the graphics operations relatively to paper.
- void [scale](#) (float scale_x, float scale_y=0.)
Changes the scaling of page coordinates.
- int [start_job](#) (FILE *ps_output, int pagecount, enum [FI_Paged_Device::Page_Format](#) format=[FI_Paged_Device::A4](#), enum [FI_Paged_Device::Page_Layout](#) layout=[FI_Paged_Device::PORTRAIT](#))
Begins the session where all graphics requests will go to FILE pointer.
- int [start_job](#) (int pagecount, enum [FI_Paged_Device::Page_Format](#) format=[FI_Paged_Device::A4](#), enum [FI_Paged_Device::Page_Layout](#) layout=[FI_Paged_Device::PORTRAIT](#))
Begins the session where all graphics requests will go to a local PostScript file.
- int [start_page](#) (void)
Starts a new printed page.
- void [translate](#) (int x, int y)
Translates the current graphics origin accounting for the current rotation.
- void [untranslate](#) (void)
Undoes the effect of a previous [translate\(\)](#) call.
- ~**FI_PostScript_File_Device** ()
The destructor.

Public Member Functions inherited from [FI_Paged_Device](#)

- virtual void [print_widget](#) ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)
Draws the widget on the printed page.
- void [print_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)
Prints a window with its title bar and frame if any.
- virtual void [print_window_part](#) ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
Prints a rectangular part of an on-screen window.
- virtual [~FI_Paged_Device](#) ()
The destructor.

Public Member Functions inherited from [FI_Surface_Device](#)

- const char * [class_name](#) ()
Returns the name of the class of this object.
- [FI_Graphics_Driver](#) * [driver](#) ()
Returns the graphics driver of this drawing surface.
- void [driver](#) ([FI_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void [set_current](#) (void)
Make this surface the current drawing surface.
- virtual [~FI_Surface_Device](#) ()
The destructor.

Public Member Functions inherited from [FI_Device](#)

- virtual [~FI_Device](#) ()
Virtual destructor.

Static Public Attributes

- static const char * [class_id](#) = [FI_Printer::class_id](#)

Static Public Attributes inherited from [FI_PostScript_File_Device](#)

- static const char * [class_id](#) = "[FI_PostScript_File_Device](#)"
- static const char * [file_chooser_title](#) = "Select a .ps file"
Label of the PostScript file chooser window.

Static Public Attributes inherited from [FI_Paged_Device](#)

- static const char * [class_id](#) = "[FI_Paged_Device](#)"
- static const [page_format](#) [page_formats](#) [[NO_PAGE_FORMATS](#)]
width, height and name of all elements of the enum [Page_Format](#).

Static Public Attributes inherited from [FI_Surface_Device](#)

- static const char * [class_id](#) = "[FI_Surface_Device](#)"

Static Public Attributes inherited from [FI_Device](#)

- static const char * [class_id](#) = "[FI_Device](#)"
A string that identifies each subclass of [FI_Device](#).

Protected Member Functions

- [FI_PostScript_Printer](#) (void)

The constructor.

Protected Member Functions inherited from [FI_PostScript_File_Device](#)

- [FI_PostScript_Graphics_Driver](#) * driver ()

Returns the PostScript driver of this drawing surface.

Protected Member Functions inherited from [FI_Paged_Device](#)

- [FI_Paged_Device](#) ()

The constructor.

Protected Member Functions inherited from [FI_Surface_Device](#)

- [FI_Surface_Device](#) ([FI_Graphics_Driver](#) *graphics_driver)

Constructor that sets the graphics driver to use for the created surface.

Friends

- class [FI_Printer](#)

Additional Inherited Members**Public Types inherited from [FI_Paged_Device](#)**

- enum [Page_Format](#) {
[A0](#) = 0 , [A1](#) , [A2](#) , [A3](#) ,

[A8](#) , [A9](#) , [B0](#) , [B1](#) ,
[B2](#) , [B3](#) , [B4](#) , [B5](#) ,
[B6](#) , [B7](#) , [B8](#) , [B9](#) ,
[B10](#) , [C5E](#) , [DLE](#) , [EXECUTIVE](#) ,
[FOLIO](#) , [LEDGER](#) , [LEGAL](#) , [LETTER](#) ,
[TABLOID](#) , [ENVELOPE](#) , [MEDIA](#) = 0x1000 }

Possible page formats.

- enum [Page_Layout](#) { [PORTRAIT](#) = 0 , [LANDSCAPE](#) = 0x100 , [REVERSED](#) = 0x200 , [ORIENTATION](#) = 0x300 }

Possible page layouts.

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * surface ()

The current drawing surface.

Protected Attributes inherited from [FI_Paged_Device](#)

- int [x_offset](#)
horizontal offset to the origin of graphics coordinates
- int [y_offset](#)
vertical offset to the origin of graphics coordinates

9.102.1 Detailed Description

Print support under Unix/Linux.

Class [Fl_PostScript_Printer](#) is implemented only on the Unix/Linux platform. It has no public constructor. Use [Fl_Printer](#) instead that is cross-platform and has the same API.

9.102.2 Member Function Documentation

9.102.2.1 class_name()

```
const char * Fl_PostScript_Printer::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the [class_name\(\)](#) function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an [Fl_Device](#) subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_PostScript_File_Device](#).

9.102.2.2 start_job()

```
int Fl_PostScript_Printer::start_job (
    int pages,
    int * firstpage = NULL,
    int * lastpage = NULL ) [virtual]
```

Starts a print job.

Reimplemented from [Fl_PostScript_File_Device](#).

The documentation for this class was generated from the following files:

- [Fl_Printer.H](#)
- [Fl_PostScript.cxx](#)
- [Fl_Printer.cxx](#)

9.103 FI_Preferences Class Reference

[Fl_Preferences](#) provides methods to store user settings between application starts.

```
#include <Fl_Preferences.H>
```

Inheritance diagram for [Fl_Preferences](#):

Classes

- struct [Entry](#)
- class [Name](#)

'Name' provides a simple method to create numerical or more complex procedural names for entries and groups on the fly.

- class [Node](#)
- class [RootNode](#)

Public Types

- typedef void * [ID](#)

Every Fl_Preferences-Group has a unique ID.

- enum [Root](#) { [SYSTEM](#) =0 , [USER](#) }

Define the scope of the preferences.

Public Member Functions

- char **clear** ()
Delete all groups and all entries.
- char **deleteAllEntries** ()
Delete all entries.
- char **deleteAllGroups** ()
Delete all groups.
- char **deleteEntry** (const char *entry)
Deletes a single name/value pair.
- char **deleteGroup** (const char *group)
Deletes a group.
- int **entries** ()
Returns the number of entries (name/value pairs) in a group.
- const char * **entry** (int index)
Returns the name of an entry.
- char **entryExists** (const char *key)
Returns non-zero if an entry with this name exists.
- **FI_Preferences** (const char *path, const char *vendor, const char *application)
Use this constructor to create or read a preferences file at an arbitrary position in the file system.
- **FI_Preferences** (const **FI_Preferences** &)
Create another reference to a Preferences group.
- **FI_Preferences** (**FI_Preferences** &parent, const char *group)
Generate or read a new group of entries within another group.
- **FI_Preferences** (**FI_Preferences** &parent, int groupIndex)
Open a child group using a given index.
- **FI_Preferences** (**FI_Preferences** *parent, const char *group)
Create or access a group of preferences using a name.
- **FI_Preferences** (**FI_Preferences** *parent, int groupIndex)
- **FI_Preferences** (ID id)
Create a new dataset access point using a dataset ID.
- **FI_Preferences** (**Root** root, const char *vendor, const char *application)
The constructor creates a group that manages name/value pairs and child groups.
- void **flush** ()
Writes all preferences to disk.
- char **get** (const char *entry, char *&value, const char *defaultValue)
Reads an entry from the group.
- char **get** (const char *entry, char *value, const char *defaultValue, int maxSize)
Reads an entry from the group.
- char **get** (const char *entry, double &value, double defaultValue)
Reads an entry from the group.
- char **get** (const char *entry, float &value, float defaultValue)
Reads an entry from the group.
- char **get** (const char *entry, int &value, int defaultValue)
Reads an entry from the group.
- char **get** (const char *entry, void *&value, const void *defaultValue, int defaultSize)
Reads an entry from the group.
- char **get** (const char *entry, void *value, const void *defaultValue, int defaultSize, int maxSize)
Reads an entry from the group.
- char **getUserdataPath** (char *path, int pathlen)
Creates a path that is related to the preferences file and that is usable for additional application data.

- `const char * group (int num_group)`
Returns the name of the Nth (num_group) group.
- `char groupExists (const char *key)`
Returns non-zero if a group with this name exists.
- `int groups ()`
Returns the number of groups that are contained within a group.
- `ID id ()`
Return an ID that can later be reused to open more references to this dataset.
- `const char * name ()`
Return the name of this entry.
- `const char * path ()`
Return the full path to this entry.
- `char set (const char *entry, const char *value)`
Sets an entry (name/value pair).
- `char set (const char *entry, const void *value, int size)`
Sets an entry (name/value pair).
- `char set (const char *entry, double value)`
Sets an entry (name/value pair).
- `char set (const char *entry, double value, int precision)`
Sets an entry (name/value pair).
- `char set (const char *entry, float value)`
Sets an entry (name/value pair).
- `char set (const char *entry, float value, int precision)`
Sets an entry (name/value pair).
- `char set (const char *entry, int value)`
Sets an entry (name/value pair).
- `int size (const char *entry)`
Returns the size of the value part of an entry.
- `virtual ~FI_Preferences ()`
The destructor removes allocated resources.

Static Public Member Functions

- `static const char * newUUID ()`
Returns a UUID as generated by the system.
- `static char remove (ID id_)`
Remove the group with this ID from a database.

Protected Attributes

- `Node * node`
- `RootNode * rootNode`

Friends

- class `Node`
- class `RootNode`

9.103.1 Detailed Description

[FI_Preferences](#) provides methods to store user settings between application starts.

It is similar to the Registry on WIN32 and Preferences on MacOS, and provides a simple configuration mechanism for UNIX.

[FI_Preferences](#) uses a hierarchy to store data. It bundles similar data into groups and manages entries into those groups as name/value pairs.

Preferences are stored in text files that can be edited manually. The file format is easy to read and relatively forgiving. Preferences files are the same on all platforms. User comments in preference files are preserved. Filenames are unique for each application by using a vendor/application naming scheme. The user must provide default values for all entries to ensure proper operation should preferences be corrupted or not yet exist.

Entries can be of any length. However, the size of each preferences file should be kept small for performance reasons. One application can have multiple preferences files. Extensive binary data however should be stored in separate files: see [getUserdataPath\(\)](#).

Note

Starting with FLTK 1.3, preference databases are expected to be in UTF-8 encoding. Previous databases were stored in the current character set or code page which renders them incompatible for text entries using international characters.

9.103.2 Member Typedef Documentation

9.103.2.1 ID

```
typedef void* Fl_Preferences::ID
```

Every [FI_Preferences-Group](#) has a unique ID.

ID's can be retrieved from an [FI_Preferences-Group](#) and can then be used to create more [FI_Preference](#) references to the same data set, as long as the database remains open.

9.103.3 Member Enumeration Documentation

9.103.3.1 Root

```
enum Fl_Preferences::Root
```

Define the scope of the preferences.

Enumerator

SYSTEM	Preferences are used system-wide.
USER	Preferences apply only to the current user.

9.103.4 Constructor & Destructor Documentation

9.103.4.1 FI_Preferences() [1/7]

```
Fl_Preferences::Fl_Preferences (
    Root root,
    const char * vendor,
    const char * application )
```

The constructor creates a group that manages name/value pairs and child groups.

Groups are ready for reading and writing at any time. The root argument is either [Fl_Preferences::USER](#) or [Fl_Preferences::SYSTEM](#).

This constructor creates the *base* instance for all following entries and reads existing databases into memory. The vendor argument is a unique text string identifying the development team or vendor of an application. A domain name or an EMail address are great unique names, e.g. "researchATmatthiasm.com" or "fltk.org". The application argument can be the working title or final name of your application. Both vendor and application must be valid relative UNIX pathnames and may contain '/'s to create deeper file structures.

A set of Preferences marked "run-time" exists exactly one per application and only as long as the application runs.

It can be used as a database for volatile information. FLTK uses it to register plugins at run-time.

Parameters

in	<i>root</i>	can be USER or SYSTEM for user specific or system wide preferences
in	<i>vendor</i>	unique text describing the company or author of this file
in	<i>application</i>	unique text describing the application

9.103.4.2 Fl_Preferences() [2/7]

```
Fl_Preferences::Fl_Preferences (
    const char * path,
    const char * vendor,
    const char * application )
```

Use this constructor to create or read a preferences file at an arbitrary position in the file system.

The file name is generated in the form *path/application.prefs*. If *application* is NULL, *path* must contain the full file name.

Parameters

in	<i>path</i>	path to the directory that contains the preferences file
in	<i>vendor</i>	unique text describing the company or author of this file
in	<i>application</i>	unique text describing the application

9.103.4.3 Fl_Preferences() [3/7]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences & parent,
    const char * group )
```

Generate or read a new group of entries within another group.

Use the *group* argument to name the group that you would like to access. *Group* can also contain a path to a group further down the hierarchy by separating group names with a forward slash '/'.

Parameters

in	<i>parent</i>	reference object for the new group
in	<i>group</i>	name of the group to access (may contain '/')

9.103.4.4 Fl_Preferences() [4/7]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences * parent,
    const char * group )
```

Create or access a group of preferences using a name.

Parameters

in	<i>parent</i>	the parameter <i>parent</i> is a pointer to the parent group. <i>Parent</i> may be NULL. It then refers to an application internal database which exists only once, and remains in RAM only until the application quits. This database is used to manage plugins and other data indexes by strings.
in	<i>group</i>	a group name that is used as a key into the database

See also

[FI_Preferences\(FI_Preferences&, const char *group \)](#)

9.103.4.5 FI_Preferences() [5/7]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences & parent,
    int groupIndex )
```

Open a child group using a given index.

Use the `groupIndex` argument to find the group that you would like to access. If the given index is invalid (negative or too high), a new group is created with a UUID as a name.

The index needs to be fixed. It is currently backward. Index 0 points to the last member in the 'list' of preferences.

Parameters

in	<i>parent</i>	reference object for the new group
in	<i>groupIndex</i>	zero based index into child groups

9.103.4.6 FI_Preferences() [6/7]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences * parent,
    int groupIndex )
```

See also

[FI_Preferences\(FI_Preferences&, int groupIndex \)](#)

9.103.4.7 FI_Preferences() [7/7]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences::ID id )
```

Create a new dataset access point using a dataset ID.

ID's are a great way to remember shortcuts to database entries that are deeply nested in a preferences database, as long as the database root is not deleted. An ID can be retrieved from any [FI_Preferences](#) dataset, and can then be used to create multiple new references to the same dataset.

ID's can be very helpful when put into the `user_data()` field of widget callbacks.

9.103.4.8 ~FI_Preferences()

```
Fl_Preferences::~Fl_Preferences ( ) [virtual]
```

The destructor removes allocated resources.

When used on the *base* preferences group, the destructor flushes all changes to the preferences file and deletes all internal databases.

The destructor does not remove any data from the database. It merely deletes your reference to the database.

9.103.5 Member Function Documentation

9.103.5.1 deleteEntry()

```
char Fl_Preferences::deleteEntry (
    const char * key )
```

Deletes a single name/value pair.

This function removes the entry `key` from the database.

Parameters

in	<i>key</i>	name of entry to delete
----	------------	-------------------------

Returns

0 if deleting the entry failed

9.103.5.2 deleteGroup()

```
char Fl_Preferences::deleteGroup (
    const char * group )
```

Deletes a group.

Removes a group and all keys and groups within that group from the database.

Parameters

in	<i>group</i>	name of the group to delete
----	--------------	-----------------------------

Returns

0 if call failed

9.103.5.3 entries()

```
int Fl_Preferences::entries ( )
```

Returns the number of entries (name/value pairs) in a group.

Returns

number of entries

9.103.5.4 entry()

```
const char * Fl_Preferences::entry (
    int index )
```

Returns the name of an entry.

There is no guaranteed order of entry names. The index must be within the range given by [entries\(\)](#).

Parameters

in	<i>index</i>	number indexing the requested entry
----	--------------	-------------------------------------

Returns

pointer to value cstring

9.103.5.5 entryExists()

```
char Fl_Preferences::entryExists (
    const char * key )
```

Returns non-zero if an entry with this name exists.

Parameters

in	<i>key</i>	name of entry that is searched for
----	------------	------------------------------------

Returns

0 if entry was not found

9.103.5.6 flush()

```
void Fl_Preferences::flush ( )
```

Writes all preferences to disk.

This function works only with the base preferences group. This function is rarely used as deleting the base preferences flushes automatically.

9.103.5.7 get() [1/7]

```
char Fl_Preferences::get (
    const char * key,
    char *& text,
    const char * defaultValue )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). [get\(\)](#) allocates memory of sufficient size to hold the value. The buffer must be free'd by the developer using 'free(value)'.

Parameters

in	<i>key</i>	name of entry
out	<i>text</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

9.103.5.8 get() [2/7]

```
char Fl_Preferences::get (
    const char * key,
    char * text,
    const char * defaultValue,
    int maxSize )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). 'maxSize' is the maximum length of text that will be read. The text buffer must allow for one additional byte for a trailing zero.

Parameters

in	<i>key</i>	name of entry
out	<i>text</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>maxSize</i>	maximum length of value plus one byte for a trailing zero

Returns

0 if the default value was used

9.103.5.9 get() [3/7]

```
char Fl_Preferences::get (
    const char * key,
    double & value,
    double defaultValue )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

9.103.5.10 get() [4/7]

```
char Fl_Preferences::get (
    const char * key,
    float & value,
    float defaultValue )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

9.103.5.11 get() [5/7]

```
char Fl_Preferences::get (
    const char * key,
    int & value,
    int defaultValue )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

9.103.5.12 get() [6/7]

```
char Fl_Preferences::get (
    const char * key,
    void *& data,
    const void * defaultValue,
    int defaultSize )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). [get\(\)](#) allocates memory of sufficient size to hold the value. The buffer must be free'd by the developer using 'free(value)'.

Parameters

in	<i>key</i>	name of entry
out	<i>data</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>defaultSize</i>	size of default value array

Returns

0 if the default value was used

9.103.5.13 get() [7/7]

```
char Fl_Preferences::get (
    const char * key,
    void * data,
    const void * defaultValue,
    int defaultSize,
    int maxSize )
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). 'maxSize' is the maximum length of text that will be read.

Parameters

in	<i>key</i>	name of entry
out	<i>data</i>	value returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>defaultSize</i>	size of default value array
in	<i>maxSize</i>	maximum length of value

Returns

0 if the default value was used

Todo maxSize should receive the number of bytes that were read.

9.103.5.14 getUserdataPath()

```
char Fl_Preferences::getUserdataPath (
    char * path,
    int pathlen )
```

Creates a path that is related to the preferences file and that is usable for additional application data. This function creates a directory that is named after the preferences database without the .prefs extension and located in the same directory. It then fills the given buffer with the complete path name.

Example:

```
Fl_Preferences prefs( USER, "matthiasm.com", "test" );
char path[FL_PATH_MAX];
prefs.getUserdataPath( path );
..creates the preferences database in (MS Windows):
c:/Documents and Settings/matt/Application Data/matthiasm.com/test.prefs
..and returns the userdata path:
c:/Documents and Settings/matt/Application Data/matthiasm.com/test/
```

Parameters

out	<i>path</i>	buffer for user data path
in	<i>pathlen</i>	size of path buffer (should be at least FL_PATH_MAX)

Returns

0 if path was not created or pathname can't fit into buffer

9.103.5.15 group()

```
const char * Fl_Preferences::group (
    int num_group )
```

Returns the name of the Nth (num_group) group.

There is no guaranteed order of group names. The index must be within the range given by [groups\(\)](#).

Parameters

in	<i>num_group</i>	number indexing the requested group
----	------------------	-------------------------------------

Returns

'C' string pointer to the group name

9.103.5.16 groupExists()

```
char Fl_Preferences::groupExists (
    const char * key )
```

Returns non-zero if a group with this name exists.

Group names are relative to the Preferences node and can contain a path. "." describes the current node, "/" describes the topmost node. By preceding a groupname with a "./", its path becomes relative to the topmost node.

Parameters

in	<i>key</i>	name of group that is searched for
----	------------	------------------------------------

Returns

0 if no group by that name was found

9.103.5.17 groups()

```
int Fl_Preferences::groups ( )
```

Returns the number of groups that are contained within a group.

Returns

0 for no groups at all

9.103.5.18 newUUID()

```
const char * Fl_Preferences::newUUID ( ) [static]
```

Returns a UUID as generated by the system.

A UUID is a "universally unique identifier" which is commonly used in configuration files to create identities. A UUID in ASCII looks like this: 937C4900-51AA-4C11-8DD3-7AB59944F03E. It has always 36 bytes plus a trailing zero.

Returns

a pointer to a static buffer containing the new UUID in ASCII format. The buffer is overwritten during every call to this function!

9.103.5.19 set() [1/7]

```
char Fl_Preferences::set (
    const char * key,
    const char * text )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>text</i>	set this entry to value

Returns

0 if setting the value failed

9.103.5.20 set() [2/7]

```
char Fl_Preferences::set (
    const char * key,
    const void * data,
    int dsize )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>data</i>	set this entry to value
in	<i>dsize</i>	size of data array

Returns

0 if setting the value failed

9.103.5.21 set() [3/7]

```
char Fl_Preferences::set (
    const char * key,
    double value )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

9.103.5.22 set() [4/7]

```
char Fl_Preferences::set (
    const char * key,
    double value,
    int precision )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>
in	<i>precision</i>	number of decimal digits to represent value

Returns

0 if setting the value failed

9.103.5.23 set() [5/7]

```
char Fl_Preferences::set (
    const char * key,
    float value )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

9.103.5.24 set() [6/7]

```
char Fl_Preferences::set (
    const char * key,
    float value,
    int precision )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>
in	<i>precision</i>	number of decimal digits to represent value

Returns

0 if setting the value failed

9.103.5.25 set() [7/7]

```
char Fl_Preferences::set (
    const char * key,
    int value )
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preferences file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

9.103.5.26 size()

```
int Fl_Preferences::size (
    const char * key )
```

Returns the size of the value part of an entry.

Parameters

in	<i>key</i>	name of entry
----	------------	---------------

Returns

size of value

The documentation for this class was generated from the following files:

- FI_Preferences.H
- FI_Preferences.cxx

9.104 FI_Printer Class Reference

OS-independent print support.

```
#include <FI_Printer.H>
```

Inheritance diagram for FI_Printer:

**Public Member Functions**

- `const char * class_name ()`
Returns the name of the class of this object.
- `FI_Graphics_Driver * driver (void)`
- `void end_job (void)`
To be called at the end of a print job.
- `int end_page (void)`
To be called at the end of each page.
- `FI_Printer (void)`
The constructor.
- `void margins (int *left, int *top, int *right, int *bottom)`
Computes the dimensions of margins that lie between the printable page area and the full page.
- `void origin (int *x, int *y)`
Computes the page coordinates of the current origin of graphics functions.
- `void origin (int x, int y)`
Sets the position in page coordinates of the origin of graphics functions.
- `void print_widget (FI_Widget *widget, int delta_x=0, int delta_y=0)`
Draws the widget on the printed page.
- `void print_window_part (FI_Window *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)`
Prints a rectangular part of an on-screen window.
- `int printable_rect (int *w, int *h)`
Computes the width and height of the printable area of the page.
- `void rotate (float angle)`
Rotates the graphics operations relatively to paper.
- `void scale (float scale_x, float scale_y=0.)`
Changes the scaling of page coordinates.
- `void set_current (void)`

- Make this surface the current drawing surface.*

 - int [start_job](#) (int pagecount, int *frompage=NULL, int *topage=NULL)
Starts a print job.
 - int [start_page](#) (void)
Starts a new printed page.
 - void [translate](#) (int x, int y)
Translates the current graphics origin accounting for the current rotation.
 - void [untranslate](#) (void)
Undoes the effect of a previous [translate\(\)](#) call.
 - [~FI_Printer](#) (void)
The destructor.

Public Member Functions inherited from [FI_Paged_Device](#)

- void [print_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)
Prints a window with its title bar and frame if any.
- virtual [~FI_Paged_Device](#) ()
The destructor.

Public Member Functions inherited from [FI_Surface_Device](#)

- const char * [class_name](#) ()
Returns the name of the class of this object.
- [FI_Graphics_Driver](#) * [driver](#) ()
Returns the graphics driver of this drawing surface.
- void [driver](#) ([FI_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual [~FI_Surface_Device](#) ()
The destructor.

Public Member Functions inherited from [FI_Device](#)

- virtual [~FI_Device](#) ()
Virtual destructor.

Static Public Attributes

- static const char * [class_id](#) = "FI_Printer"

These attributes are effective under the Xlib platform only.

- static const char * [dialog_title](#) = "Print"
[this text may be customized at run-time]
- static const char * [dialog_printer](#) = "Printer:"
[this text may be customized at run-time]
- static const char * [dialog_range](#) = "Print Range"
[this text may be customized at run-time]
- static const char * [dialog_copies](#) = "Copies"
[this text may be customized at run-time]
- static const char * [dialog_all](#) = "All"
[this text may be customized at run-time]
- static const char * [dialog_pages](#) = "Pages"
[this text may be customized at run-time]
- static const char * [dialog_from](#) = "From:"
[this text may be customized at run-time]
- static const char * [dialog_to](#) = "To:"

- *[this text may be customized at run-time]*
static const char * **dialog_properties** = "Properties..."
- *[this text may be customized at run-time]*
static const char * **dialog_copyNo** = "# Copies:"
- *[this text may be customized at run-time]*
static const char * **dialog_print_button** = "Print"
- *[this text may be customized at run-time]*
static const char * **dialog_cancel_button** = "Cancel"
- *[this text may be customized at run-time]*
static const char * **dialog_print_to_file** = "Print To File"
- *[this text may be customized at run-time]*
static const char * **property_title** = "Printer Properties"
- *[this text may be customized at run-time]*
static const char * **property_pagesize** = "Page Size:"
- *[this text may be customized at run-time]*
static const char * **property_mode** = "Output Mode:"
- *[this text may be customized at run-time]*
static const char * **property_use** = "Use"
- *[this text may be customized at run-time]*
static const char * **property_save** = "Save"
- *[this text may be customized at run-time]*
static const char * **property_cancel** = "Cancel"

Static Public Attributes inherited from [FI_Paged_Device](#)

- static const char * **class_id** = "FI_Paged_Device"
- static const [page_format](#) **page_formats** [[NO_PAGE_FORMATS](#)]
width, height and name of all elements of the enum [Page_Format](#).

Static Public Attributes inherited from [FI_Surface_Device](#)

- static const char * **class_id** = "FI_Surface_Device"

Static Public Attributes inherited from [FI_Device](#)

- static const char * **class_id** = "FI_Device"
A string that identifies each subclass of [FI_Device](#).

Additional Inherited Members

Public Types inherited from [FI_Paged_Device](#)

- enum [Page_Format](#) {
A0 = 0 , **A1** , **A2** , **A3** ,
A4 , **A5** , **A6** , **A7** ,
A8 , **A9** , **B0** , **B1** ,
B2 , **B3** , **B4** , **B5** ,
B6 , **B7** , **B8** , **B9** ,
B10 , **C5E** , **DLE** , **EXECUTIVE** ,
FOLIO , **LEDGER** , **LEGAL** , **LETTER** ,
TABLOID , **ENVELOPE** , **MEDIA** = 0x1000 }
Possible page formats.
- enum [Page_Layout](#) { **PORTRAIT** = 0 , **LANDSCAPE** = 0x100 , **REVERSED** = 0x200 , **ORIENTATION** = 0x300 }
Possible page layouts.

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * [surface](#) ()

The current drawing surface.

Protected Member Functions inherited from [FI_Paged_Device](#)

- [FI_Paged_Device](#) ()

The constructor.

Protected Member Functions inherited from [FI_Surface_Device](#)

- [FI_Surface_Device](#) ([FI_Graphics_Driver](#) *graphics_driver)

Constructor that sets the graphics driver to use for the created surface.

Protected Attributes inherited from [FI_Paged_Device](#)

- int [x_offset](#)

horizontal offset to the origin of graphics coordinates

- int [y_offset](#)

vertical offset to the origin of graphics coordinates

9.104.1 Detailed Description

OS-independent print support.

[FI_Printer](#) allows to use all drawing, color, text, image, and clip FLTK functions, and to have them operate on printed page(s). There are two main, non exclusive, ways to use it.

- Print any widget (standard, custom, [FI_Window](#), [FI_GL_Window](#)) as it appears on screen, with optional translation, scaling and rotation. This is done by calling [print_widget\(\)](#), [print_window\(\)](#) or [print_window_part\(\)](#).
- Use a series of FLTK graphics commands (e.g., font, text, lines, colors, clip, image) to compose a page appropriately shaped for printing.

In both cases, begin by [start_job\(\)](#), [start_page\(\)](#), [printable_rect\(\)](#) and [origin\(\)](#) calls and finish by [end_page\(\)](#) and [end_job\(\)](#) calls.

Example of use: print a widget centered in a page

```
#include <FL/Fl_Printer.H>
#include <FL/fl_draw.H>
int width, height;
Fl_Widget *widget = ... // a widget we want printed
FI_Printer *printer = new FI_Printer();
if (printer->start_job(1) == 0) {
    printer->start_page();
    printer->printable_rect(&width, &height);
    fl_color(FL_BLACK);
    fl_line_style(FL_SOLID, 2);
    fl_rect(0, 0, width, height);
    fl_font(FL_COURIER, 12);
    time_t now; time(&now); fl_draw(ctime(&now), 0, fl_height());
    printer->origin(width/2, height/2);
    printer->print_widget(widget, -widget->w()/2, -widget->h()/2);
    printer->end_page();
    printer->end_job();
}
delete printer;
```

Platform specifics

- Unix/Linux platforms: Unless it has been previously changed, the default paper size is A4. To change that, press the "Properties" button of the "Print" dialog window opened by an [FI_Printer::start_job\(\)](#) call. This opens a "Printer Properties" window where it's possible to select the adequate paper size. Finally press the "Save" button therein to assign the chosen paper size to the chosen printer for this and all further print operations. Class [FI_RGB_Image](#) prints but loses its transparency if it has one. See class [FI_PostScript_Graphics_Driver](#) for a description of how UTF-8 strings appear in print. Use the static public attributes of this class to set the print dialog to other languages than English. For example, the "Printer:" dialog item [FI_Printer::dialog_printer](#) can be set to French with:

```
Fl_Printer::dialog_printer = "Imprimante:";
```

before creation of the `Fl_Printer` object. Use `Fl_PostScript_File_Device::file_chooser_title` to customize the title of the file chooser dialog that opens when using the "Print To File" option of the print dialog.

- MSWindows platform: Transparent `Fl_RGB_Image` 's don't print with exact transparency on most printers. `Fl_RGB_Image` 's don't `rotate()` well. A workaround is to use the `print_window_part()` call.
- Mac OS X platform: all graphics requests print as on display.

9.104.2 Member Function Documentation

9.104.2.1 `class_name()`

```
const char * Fl_Printer::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the `class_name()` function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an `Fl_Device` subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from `Fl_Paged_Device`.

9.104.2.2 `end_job()`

```
void Fl_Printer::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented from `Fl_Paged_Device`.

9.104.2.3 `end_page()`

```
int Fl_Printer::end_page (
    void ) [virtual]
```

To be called at the end of each page.

Returns

0 if OK, non-zero if any error.

Reimplemented from `Fl_Paged_Device`.

9.104.2.4 `margins()`

```
void Fl_Printer::margins (
    int * left,
    int * top,
    int * right,
    int * bottom ) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by `scale()` calls.

Parameters

out	<i>left</i>	If non-null, <i>*left</i> is set to the left margin size.
out	<i>top</i>	If non-null, <i>*top</i> is set to the top margin size.
out	<i>right</i>	If non-null, <i>*right</i> is set to the right margin size.
out	<i>bottom</i>	If non-null, <i>*bottom</i> is set to the bottom margin size.

Reimplemented from `Fl_Paged_Device`.

9.104.2.5 origin() [1/2]

```
void Fl_Printer::origin (
    int * x,
    int * y ) [virtual]
```

Computes the page coordinates of the current origin of graphics functions.

Parameters

out	<i>x</i>	If non-null, *x is set to the horizontal page offset of graphics origin.
out	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.104.2.6 origin() [2/2]

```
void Fl_Printer::origin (
    int x,
    int y ) [virtual]
```

Sets the position in page coordinates of the origin of graphics functions.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the page printable area. Origin() calls are not affected by [rotate\(\)](#) calls. Successive [origin\(\)](#) calls don't combine their effects.

Parameters

in	<i>x</i>	Horizontal position in page coordinates of the desired origin of graphics functions.
in	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.104.2.7 print_widget()

```
void Fl_Printer::print_widget (
    Fl_Widget * widget,
    int delta_x = 0,
    int delta_y = 0 ) [virtual]
```

Draws the widget on the printed page.

The widget's position on the printed page is determined by the last call to [origin\(\)](#) and by the optional `delta_x` and `delta_y` arguments. Its dimensions are in points unless there was a previous call to [scale\(\)](#).

Parameters

in	<i>widget</i>	Any FLTK widget (e.g., standard, custom, window).
in	<i>delta_x</i>	Optional horizontal offset for positioning the widget relatively to the current origin of graphics functions.
in	<i>delta_y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.104.2.8 print_window_part()

```
void Fl_Printer::print_window_part (
    Fl_Window * win,
    int x,
    int y,
```

```

    int w,
    int h,
    int delta_x = 0,
    int delta_y = 0 ) [virtual]

```

Prints a rectangular part of an on-screen window.

Parameters

<i>win</i>	The window from where to capture.
<i>x</i>	The rectangle left
<i>y</i>	The rectangle top
<i>w</i>	The rectangle width
<i>h</i>	The rectangle height
<i>delta</i> _↔ <i>_x</i>	Optional horizontal offset from current graphics origin where to print the captured rectangle.
<i>delta</i> _↔ <i>_y</i>	As above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.104.2.9 printable_rect()

```

int Fl_Printer::printable_rect (
    int * w,
    int * h ) [virtual]

```

Computes the width and height of the printable area of the page.

Values are in the same unit as that used by FLTK drawing functions, are unchanged by calls to [origin\(\)](#), but are changed by [scale\(\)](#) calls. Values account for the user-selected paper type and print orientation.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.104.2.10 rotate()

```

void Fl_Printer::rotate (
    float angle ) [virtual]

```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented from [Fl_Paged_Device](#).

9.104.2.11 scale()

```

void Fl_Printer::scale (
    float scale_x,
    float scale_y = 0. ) [virtual]

```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<code>scale_x</code>	Horizontal dimensions of plot are multiplied by this quantity.
<code>scale_y</code>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented from [Fl_Paged_Device](#).

9.104.2.12 set_current()

```
void Fl_Printer::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Reimplemented from [Fl_Surface_Device](#).

9.104.2.13 start_job()

```
int Fl_Printer::start_job (
    int pagecount,
    int * frompage = NULL,
    int * topage = NULL ) [virtual]
```

Starts a print job.

Opens a platform-specific dialog window allowing the user to set several options including the desired printer and the page orientation. Optionally, the user can also select a range of pages to be printed. This range is returned to the caller that is in charge of sending only these pages for printing.

Parameters

in	<code>pagecount</code>	the total number of pages of the job (or 0 if you don't know the number of pages)
out	<code>frompage</code>	if non-null, <code>*frompage</code> is set to the first page the user wants printed
out	<code>topage</code>	if non-null, <code>*topage</code> is set to the last page the user wants printed

Returns

0 if OK, non-zero if any error occurred or if the user cancelled the print request.

Reimplemented from [Fl_Paged_Device](#).

9.104.2.14 start_page()

```
int Fl_Printer::start_page (
    void ) [virtual]
```

Starts a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.104.2.15 translate()

```
void Fl_Printer::translate (
    int x,
    int y ) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

This function is only useful after a [rotate\(\)](#) call. Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects. Reimplemented from [Fl_Paged_Device](#).

9.104.2.16 untranslate()

```
void Fl_Printer::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Paged_Device](#).

The documentation for this class was generated from the following files:

- [Fl_Printer.H](#)
- [Fl_Printer.cxx](#)

9.105 Fl_Progress Class Reference

Displays a progress bar for the user.

```
#include <Fl_Progress.H>
```

Inheritance diagram for [Fl_Progress](#):

Public Member Functions

- [Fl_Progress](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
 - The constructor creates the progress bar using the position, size, and label.*
- float [maximum](#) () const
 - Gets the maximum value in the progress widget.*
- void [maximum](#) (float *v*)
 - Sets the maximum value in the progress widget.*
- float [minimum](#) () const
 - Gets the minimum value in the progress widget.*
- void [minimum](#) (float *v*)
 - Sets the minimum value in the progress widget.*
- float [value](#) () const
 - Gets the current value in the progress widget.*
- void [value](#) (float *v*)
 - Sets the current value in the progress widget.*

Public Member Functions inherited from [Fl_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
 - Activates the widget.*
- unsigned int [active](#) () const
 - Returns whether the widget is active.*
- int [active_r](#) () const
 - Returns whether the widget and all of its parents are active.*

- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)

- For back compatibility only.*
- int `contains` (const `FL_Widget *w`) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- uchar `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label.
- const `FL_Image * deimage` () const
- void `deimage` (`FL_Image &img`)

Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image *img`)

Sets the image to use as part of the widget label.
- void `do_callback` ()

Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, long arg)

Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, void *arg=0)

Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- virtual int `handle` (int event)

Handles the specified event.
- virtual void `hide` ()

Makes a widget invisible.
- `FL_Image * image` ()

Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (`FL_Image &img`)

Sets the image to use as part of the widget label.
- void `image` (`FL_Image *img`)

Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget *wgt`) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.

- void `label` (const char *text)
Sets the current label pointer.
- void `label` (FI_Labeltype a, const char *b)
Shortcut to set the label text and type in one call.
- FI_Color `labelcolor` () const
Gets the label color.
- void `labelcolor` (FI_Color c)
Sets the label color.
- FI_Font `labelfont` () const
Gets the font to use.
- void `labelfont` (FI_Font f)
Sets the font to use.
- FI_Fontsize `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (FI_Fontsize pix)
Sets the font size in pixels.
- FI_Labeltype `labeltype` () const
Gets the label type.
- void `labeltype` (FI_Labeltype a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- FI_Group * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (FI_Group *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- FI_Color `selection_color` () const
Gets the selection color.
- void `selection_color` (FI_Color a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()

- Makes a widget visible.*

 - void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- unsigned int [visible](#) () const

Returns whether a widget is visible.
- unsigned int [visible_focus](#) ()

Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)

Modifies keyboard focus navigation.
- int [visible_r](#) () const

Returns whether a widget and all its parents are visible.
- int [w](#) () const

Gets the widget width.
- [Fl_When](#) [when](#) () const

Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)

Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const

Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const

Gets the widget position in its window.
- int [y](#) () const

Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()

Destroys the widget.

Protected Member Functions

- virtual void [draw](#) ()
Draws the progress bar.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
 - [INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
 - [FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 - ,
 - [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 - ,
 - [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 - ,
 - [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#) = 1<<19 ,
 - [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

9.105.1 Detailed Description

Displays a progress bar for the user.

9.105.2 Constructor & Destructor Documentation

9.105.2.1 [Fl_Progress\(\)](#)

```
Fl_Progress::Fl_Progress (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

The constructor creates the progress bar using the position, size, and label.

You can set the background color with [color\(\)](#) and the progress bar color with [selection_color\(\)](#), or you can set both colors together with `color(unsigned bg, unsigned sel)`.

The default colors are `FL_BACKGROUND2_COLOR` and `FL_YELLOW`, resp.

9.105.3 Member Function Documentation

9.105.3.1 [draw\(\)](#)

```
void Fl_Progress::draw (
    void ) [protected], [virtual]
```

Draws the progress bar.

Implements [Fl_Widget](#).

9.105.3.2 [maximum\(\)](#) [1/2]

```
float Fl_Progress::maximum ( ) const [inline]
```

Gets the maximum value in the progress widget.

9.105.3.3 [maximum\(\)](#) [2/2]

```
void Fl_Progress::maximum (
    float v ) [inline]
```

Sets the maximum value in the progress widget.

9.105.3.4 minimum() [1/2]

```
float Fl_Progress::minimum ( ) const [inline]
```

Gets the minimum value in the progress widget.

9.105.3.5 minimum() [2/2]

```
void Fl_Progress::minimum (
    float v ) [inline]
```

Sets the minimum value in the progress widget.

9.105.3.6 value() [1/2]

```
float Fl_Progress::value ( ) const [inline]
```

Gets the current value in the progress widget.

9.105.3.7 value() [2/2]

```
void Fl_Progress::value (
    float v ) [inline]
```

Sets the current value in the progress widget.

The documentation for this class was generated from the following files:

- Fl_Progress.H
- Fl_Progress.cxx

9.106 Fl_Quartz_Graphics_Driver Class Reference

The Mac OS X-specific graphics class.

```
#include <Fl_Device.H>
```

Inheritance diagram for Fl_Quartz_Graphics_Driver:

**Public Member Functions**

- const char * `class_name` ()
Returns the name of the class of this object.
- void `color` (Fl_Color c)
see `fl_color(Fl_Color c)`.
- void `color` (uchar r, uchar g, uchar b)
see `fl_color(uchar r, uchar g, uchar b)`.
- void `copy_offscreen` (int x, int y, int w, int h, Fl_Offscreen pixmap, int srcx, int srcy)

- see [fl_copy_offscreen\(\)](#)

9.106.1 Detailed Description

The Mac OS X-specific graphics class.

This class is implemented only on the Mac OS X platform.

9.106.2 Member Function Documentation

9.106.2.1 class_name()

```
const char * Fl_Quartz_Graphics_Driver::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the [class_name\(\)](#) function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an [Fl_Device](#) subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.2 color() [1/2]

```
void Fl_Quartz_Graphics_Driver::color (
    Fl_Color c ) [virtual]
```

see fl_color(Fl_Color c).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.3 color() [2/2]

```
void Fl_Quartz_Graphics_Driver::color (
    uchar r,
    uchar g,
    uchar b ) [virtual]
```

see [fl_color\(uchar r, uchar g, uchar b\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.4 descent()

```
int Fl_Quartz_Graphics_Driver::descent ( ) [virtual]
```

see [fl_descent\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.5 draw() [1/5]

```
void Fl_Quartz_Graphics_Driver::draw (
    const char * str,
    int n,
    int x,
    int y ) [virtual]
```

see [fl_draw\(const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.6 draw() [2/5]

```
void Fl_Quartz_Graphics_Driver::draw (
    Fl_Bitmap * bm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Bitmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the *cx* and *cy* arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.7 draw() [3/5]

```
void Fl_Quartz_Graphics_Driver::draw (
    Fl_Pixmap * pxm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Pixmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the *cx* and *cy* arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.8 draw() [4/5]

```
void Fl_Quartz_Graphics_Driver::draw (
    Fl_RGB_Image * rgb,
```

```

    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]

```

Draws an [Fl_RGB_Image](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.9 draw() [5/5]

```

void Fl_Quartz_Graphics_Driver::draw (
    int angle,
    const char * str,
    int n,
    int x,
    int y ) [virtual]

```

see [fl_draw\(int angle, const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.10 draw_image() [1/2]

```

void Fl_Quartz_Graphics_Driver::draw_image (
    const uchar * buf,
    int X,
    int Y,
    int W,
    int H,
    int D = 3,
    int L = 0 ) [virtual]

```

see [fl_draw_image\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.11 draw_image() [2/2]

```

void Fl_Quartz_Graphics_Driver::draw_image (
    Fl_Draw_Image_Cb cb,
    void * data,
    int X,
    int Y,
    int W,
    int H,
    int D = 3 ) [virtual]

```

see [fl_draw_image\(Fl_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.12 draw_image_mono() [1/2]

```

void Fl_Quartz_Graphics_Driver::draw_image_mono (
    const uchar * buf,
    int X,
    int Y,
    int W,
    int H,
    int D = 1,
    int L = 0 ) [virtual]

```

see [fl_draw_image_mono\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.13 draw_image_mono() [2/2]

```
void Fl_Quartz_Graphics_Driver::draw_image_mono (
    Fl_Draw_Image_Cb cb,
    void * data,
    int X,
    int Y,
    int W,
    int H,
    int D = 1 ) [virtual]
```

see [fl_draw_image_mono\(Fl_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.14 draw_scaled()

```
int Fl_Quartz_Graphics_Driver::draw_scaled (
    Fl_Image * img,
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Draws an [Fl_Image](#) scaled to width W & height H with top-left corner at X,Y.

Returns

zero when the graphics driver doesn't implement scaled drawing, non-zero if it does implement it.

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.15 font()

```
void Fl_Quartz_Graphics_Driver::font (
    Fl_Font face,
    Fl_Fontsize fsize ) [virtual]
```

see [fl_font\(Fl_Font face, Fl_Fontsize size\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.16 height()

```
int Fl_Quartz_Graphics_Driver::height ( ) [virtual]
```

see [fl_height\(\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.17 rtl_draw()

```
void Fl_Quartz_Graphics_Driver::rtl_draw (
    const char * str,
    int n,
    int x,
    int y ) [virtual]
```

see [fl_rtl_draw\(const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.18 text_extents()

```
void Fl_Quartz_Graphics_Driver::text_extents (
    const char * t,
    int n,
```

```

    int & dx,
    int & dy,
    int & w,
    int & h ) [virtual]

```

see [fl_text_extents\(const char*, int n, int& dx, int& dy, int& w, int& h\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.19 `width()` [1/2]

```

double Fl_Quartz_Graphics_Driver::width (
    const char * str,
    int n ) [virtual]

```

see [fl_width\(const char *str, int n\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.106.2.20 `width()` [2/2]

```

double Fl_Quartz_Graphics_Driver::width (
    unsigned int c ) [virtual]

```

see [fl_width\(unsigned int n\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.107 `Fl_Radio_Button` Class Reference

Inheritance diagram for `Fl_Radio_Button`:

Public Member Functions

- [Fl_Radio_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [Fl_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([Fl_Boxtype](#) b)
Sets the down box type.
- [Fl_Color](#) [down_color](#) () const
(for backwards compatibility)

- void **down_color** (unsigned c)
(for backwards compatibility)
- **FI_Button** (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- virtual int **handle** (int)
Handles the specified event.
- int **set** ()
Same as `value (1)`.
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value (1)` or `set ()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to `s`.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from **FI_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window** * **as_gl_window** ()
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
- virtual **FI_Group** * **as_group** ()
Returns an `FI_Group` pointer if this widget is an `FI_Group`.
- virtual **FI_Window** * **as_window** ()
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.

- void `callback` (`FI_Callback` *cb)
 - Sets the current callback function for the widget.*
- void `callback` (`FI_Callback` *cb, void *p)
 - Sets the current callback function for the widget.*
- void `callback` (`FI_Callback0` *cb)
 - Sets the current callback function for the widget.*
- void `callback` (`FI_Callback1` *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int `changed` () const
 - Checks if the widget value changed since the last callback.*
- void `clear_active` ()
 - Marks the widget as inactive without sending events or changing focus.*
- void `clear_changed` ()
 - Marks the value of the widget as unchanged.*
- void `clear_damage` (`uchar` c=0)
 - Clears or sets the damage flags.*
- void `clear_output` ()
 - Sets a widget to accept input.*
- void `clear_visible` ()
 - Hides the widget.*
- void `clear_visible_focus` ()
 - Disables keyboard focus navigation with this widget.*
- `FI_Color` `color` () const
 - Gets the background color of the widget.*
- void `color` (`FI_Color` bg)
 - Sets the background color of the widget.*
- void `color` (`FI_Color` bg, `FI_Color` sel)
 - Sets the background and selection color of the widget.*
- `FI_Color` `color2` () const
 - For back compatibility only.*
- void `color2` (unsigned a)
 - For back compatibility only.*
- int `contains` (const `FI_Widget` *w) const
 - Checks if w is a child of this widget.*
- void `copy_label` (const char *new_label)
 - Sets the current label.*
- void `copy_tooltip` (const char *text)
 - Sets the current tooltip text.*
- `uchar` `damage` () const
 - Returns non-zero if `draw()` needs to be called.*
- void `damage` (`uchar` c)
 - Sets the damage bits for the widget.*
- void `damage` (`uchar` c, int x, int y, int w, int h)
 - Sets the damage bits for an area inside the widget.*
- int `damage_resize` (int, int, int, int)
 - Internal use only.*
- void `deactivate` ()
 - Deactivates the widget.*
- `FI_Image` * `deimage` ()
 - Gets the image that is used as part of the widget label.*
- const `FI_Image` * `deimage` () const

- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `image` () const
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fontsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.

- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar t`)
Sets the widget type.
- int `use_accents_menu` ()

- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * [user_data](#) () const
 - Gets the user data for this widget.*
- void [user_data](#) (void *v)
 - Sets the user data for this widget.*
- unsigned int [visible](#) () const
 - Returns whether a widget is visible.*
- unsigned int [visible_focus](#) ()
 - Checks whether this widget has a visible focus.*
- void [visible_focus](#) (int v)
 - Modifies keyboard focus navigation.*
- int [visible_r](#) () const
 - Returns whether a widget and all its parents are visible.*
- int [w](#) () const
 - Gets the widget width.*
- [FI_When](#) [when](#) () const
 - Returns the conditions under which the callback is called.*
- void [when](#) (uchar i)
 - Sets the flags used to decide when a callback is called.*
- [FI_Window](#) * [window](#) () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int [x](#) () const
 - Gets the widget position in its window.*
- int [y](#) () const
 - Gets the widget position in its window.*
- virtual [~FI_Widget](#) ()
 - Destroys the widget.*

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
 - The default callback for all widgets that don't set a callback.*
- static unsigned int [label_shortcut](#) (const char *t)
 - Returns the Unicode value of the '&x' shortcut in a given text.*
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
 - Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from [FI_Widget](#)

- enum {
 - [INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
 - [FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 - ,
 - [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 - ,
 - [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 - ,
 - [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#) = 1<<19 ,
 - [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

Protected Member Functions inherited from FI_Button

- virtual void **draw** ()
Draws the widget.
- void **simulate_key_action** ()

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from FI_Button

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from FI_Button

- static FI_Widget_Tracker * **key_release_tracker** = 0

9.107.1 Constructor & Destructor Documentation

9.107.1.1 FI_Radio_Button()

```

Fl_Radio_Button::Fl_Radio_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )

```

The constructor creates the button using the given position, size, and label. The Button [type\(\)](#) is set to FL_RADIO_BUTTON.

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- [Fl_Radio_Button.H](#)
- [Fl_Button.cxx](#)

Inheritance diagram for [FI_Radio_Light_Button](#):

Public Member Functions

- [FI_Radio_Light_Button](#) (int X, int Y, int W, int H, const char *l=0)

Public Member Functions inherited from [FI_Light_Button](#)

- [FI_Light_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Light_Button](#) widget using the given position, size, and label string.
- virtual int [handle](#) (int)
Handles the specified event.

Public Member Functions inherited from [FI_Button](#)

- int [clear](#) ()
Same as [value](#) (0).
- [FI_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when [value](#)() is non-zero.
- void [down_box](#) ([FI_Boxtype](#) b)

- Sets the down box type.*
- **FI_Color** `down_color` () const
 - (for backwards compatibility)*
- void **down_color** (unsigned c)
 - (for backwards compatibility)*
- **FI_Button** (int X, int Y, int W, int H, const char *L=0)
 - The constructor creates the button using the given position, size, and label.*
- int **set** ()
 - Same as `value(1)`.*
- void **setonly** ()
 - Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).*
- int **shortcut** () const
 - Returns the current shortcut key for the button.*
- void **shortcut** (const char *s)
 - (for backwards compatibility)*
- void **shortcut** (int s)
 - Sets the shortcut key to `s`.*
- char **value** () const
 - Returns the current value of the button (0 or 1).*
- int **value** (int v)
 - Sets the current value of the button.*

Public Member Functions inherited from **FI_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- **FI_Align** **align** () const
 - Gets the label alignment.*
- void **align** (**FI_Align** alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class **FI_GI_Window** * **as_gi_window** ()
 - Returns an **FI_GI_Window** pointer if this widget is an **FI_GI_Window**.*
- virtual **FI_Group** * **as_group** ()
 - Returns an **FI_Group** pointer if this widget is an **FI_Group**.*
- virtual **FI_Window** * **as_window** ()
 - Returns an **FI_Window** pointer if this widget is an **FI_Window**.*
- **FI_Boxtype** **box** () const
 - Gets the box type of the widget.*
- void **box** (**FI_Boxtype** new_box)
 - Sets the box type for the widget.*
- **FI_Callback_p** **callback** () const

- Gets the current callback function for the widget.*

 - void `callback (FI_Callback *cb)`
- Sets the current callback function for the widget.*

 - void `callback (FI_Callback *cb, void *p)`
- Sets the current callback function for the widget.*

 - void `callback (FI_Callback0 *cb)`
- Sets the current callback function for the widget.*

 - void `callback (FI_Callback1 *cb, long p=0)`
- Sets the current callback function for the widget.*

 - unsigned int `changed () const`
- Checks if the widget value changed since the last callback.*

 - void `clear_active ()`
- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed ()`
- Marks the value of the widget as unchanged.*

 - void `clear_damage (uchar c=0)`
- Clears or sets the damage flags.*

 - void `clear_output ()`
- Sets a widget to accept input.*

 - void `clear_visible ()`
- Hides the widget.*

 - void `clear_visible_focus ()`
- Disables keyboard focus navigation with this widget.*

 - `FI_Color color () const`
- Gets the background color of the widget.*

 - void `color (FI_Color bg)`
- Sets the background color of the widget.*

 - void `color (FI_Color bg, FI_Color sel)`
- Sets the background and selection color of the widget.*

 - `FI_Color color2 () const`
- For back compatibility only.*

 - void `color2 (unsigned a)`
- For back compatibility only.*

 - int `contains (const FI_Widget *w) const`
- Checks if w is a child of this widget.*

 - void `copy_label (const char *new_label)`
- Sets the current label.*

 - void `copy_tooltip (const char *text)`
- Sets the current tooltip text.*

 - `uchar damage () const`
- Returns non-zero if `draw()` needs to be called.*

 - void `damage (uchar c)`
- Sets the damage bits for the widget.*

 - void `damage (uchar c, int x, int y, int w, int h)`
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize (int, int, int, int)`
- Internal use only.*

 - void `deactivate ()`
- Deactivates the widget.*

 - `FI_Image * deimage ()`
- Gets the image that is used as part of the widget label.*

- const [FL_Image](#) * **deimage** () const
- void [deimage](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label.*
- void [deimage](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label.*
- void [do_callback](#) ()
 - Calls the widget callback.*
- void [do_callback](#) ([FL_Widget](#) *o, long arg)
 - Calls the widget callback.*
- void [do_callback](#) ([FL_Widget](#) *o, void *arg=0)
 - Calls the widget callback.*
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
 - Gets the widget height.*
- virtual void [hide](#) ()
 - Makes a widget invisible.*
- [FL_Image](#) * [image](#) ()
 - Gets the image that is used as part of the widget label.*
- const [FL_Image](#) * **image** () const
- void [image](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label.*
- void [image](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label.*
- int [inside](#) (const [FL_Widget](#) *wgt) const
 - Checks if this widget is a child of wgt.*
- int [is_label_copied](#) () const
 - Returns whether the current label was assigned with [copy_label\(\)](#).*
- const char * [label](#) () const
 - Gets the current label text.*
- void [label](#) (const char *text)
 - Sets the current label pointer.*
- void [label](#) ([FL_Labeltype](#) a, const char *b)
 - Shortcut to set the label text and type in one call.*
- [FL_Color](#) [labelcolor](#) () const
 - Gets the label color.*
- void [labelcolor](#) ([FL_Color](#) c)
 - Sets the label color.*
- [FL_Font](#) [labelfont](#) () const
 - Gets the font to use.*
- void [labelfont](#) ([FL_Font](#) f)
 - Sets the font to use.*
- [FL_Fontsize](#) [labelsize](#) () const
 - Gets the font size in pixels.*
- void [labelsize](#) ([FL_Fontsize](#) pix)
 - Sets the font size in pixels.*
- [FL_Labeltype](#) [labeltype](#) () const
 - Gets the label type.*
- void [labeltype](#) ([FL_Labeltype](#) a)
 - Sets the label type.*
- void [measure_label](#) (int &ww, int &hh) const

- Sets width `ww` and height `hh` accordingly with the label size.*

 - unsigned int `output` () const
 - Returns if a widget is used for output only.*
 - `FI_Group * parent` () const
 - Returns a pointer to the parent widget.*
 - void `parent` (`FI_Group *p`)
 - Internal use only - "for hacks only".*
 - void `position` (int X, int Y)
 - Repositions the window or widget.*
 - void `redraw` ()
 - Schedules the drawing of the widget.*
 - void `redraw_label` ()
 - Schedules the drawing of the label.*
 - virtual void `resize` (int x, int y, int w, int h)
 - Changes the size or position of the widget.*
 - `FI_Color selection_color` () const
 - Gets the selection color.*
 - void `selection_color` (`FI_Color a`)
 - Sets the selection color.*
 - void `set_active` ()
 - Marks the widget as active without sending events or changing focus.*
 - void `set_changed` ()
 - Marks the value of the widget as changed.*
 - void `set_output` ()
 - Sets a widget to output only.*
 - void `set_visible` ()
 - Makes the widget visible.*
 - void `set_visible_focus` ()
 - Enables keyboard focus navigation with this widget.*
 - virtual void `show` ()
 - Makes a widget visible.*
 - void `size` (int W, int H)
 - Changes the size of the widget.*
 - int `take_focus` ()
 - Gives the widget the keyboard focus.*
 - unsigned int `takeevents` () const
 - Returns if the widget is able to take events.*
 - int `test_shortcut` ()
 - Returns true if the widget's label contains the entered '&x' shortcut.*
 - const char * `tooltip` () const
 - Gets the current tooltip text.*
 - void `tooltip` (const char *text)
 - Sets the current tooltip text.*
 - `FI_Window * top_window` () const
 - Returns a pointer to the top-level window for the widget.*
 - `FI_Window * top_window_offset` (int &xoff, int &yoff) const
 - Finds the x/y offset of the current widget relative to the top-level window.*
 - `uchar type` () const
 - Gets the widget type.*
 - void `type` (`uchar t`)
 - Sets the widget type.*

- int `use_accents_menu` ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * `user_data` () const
 - Gets the user data for this widget.*
- void `user_data` (void *v)
 - Sets the user data for this widget.*
- unsigned int `visible` () const
 - Returns whether a widget is visible.*
- unsigned int `visible_focus` ()
 - Checks whether this widget has a visible focus.*
- void `visible_focus` (int v)
 - Modifies keyboard focus navigation.*
- int `visible_r` () const
 - Returns whether a widget and all its parents are visible.*
- int `w` () const
 - Gets the widget width.*
- `FI_When` `when` () const
 - Returns the conditions under which the callback is called.*
- void `when` (uchar i)
 - Sets the flags used to decide when a callback is called.*
- `FI_Window` * `window` () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int `x` () const
 - Gets the widget position in its window.*
- int `y` () const
 - Gets the widget position in its window.*
- virtual `~FI_Widget` ()
 - Destroys the widget.*

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *cb, void *d)
 - The default callback for all widgets that don't set a callback.*
- static unsigned int `label_shortcut` (const char *t)
 - Returns the Unicode value of the '&x' shortcut in a given text.*
- static int `test_shortcut` (const char *, const bool require_alt=false)
 - Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from `FI_Widget`

- enum {
 - `INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
 - `FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
 - ,
 - `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
 - ,
 - `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
 - ,
 - `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU` = 1<<19 ,
 - `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
 - flags possible values enumeration.*

Protected Member Functions inherited from [FI_Light_Button](#)

- virtual void [draw](#) ()
Draws the widget.

Protected Member Functions inherited from [FI_Button](#)

- void [simulate_key_action](#) ()

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Static Protected Member Functions inherited from [FI_Button](#)

- static void [key_release_timeout](#) (void *)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * [key_release_tracker](#) = 0

9.109 FI_Radio_Round_Button Class Reference

Inheritance diagram for FI_Radio_Round_Button:

Public Member Functions

- [FI_Radio_Round_Button](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FI_Radio_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Round_Button](#)

- [FI_Round_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Round_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Light_Button](#)

- [FI_Light_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Light_Button](#) widget using the given position, size, and label string.
- virtual int [handle](#) (int)
Handles the specified event.

Public Member Functions inherited from [FI_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [FI_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([FI_Boxtype](#) b)
Sets the down box type.
- [FI_Color](#) [down_color](#) () const
(for backwards compatibility)
- void [down_color](#) (unsigned c)
(for backwards compatibility)
- [FI_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int [set](#) ()
Same as `value(1)`.
- void [setonly](#) ()
Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int [shortcut](#) () const
Returns the current shortcut key for the button.

- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to s.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_GI_Window](#) * **as_gl_window** ()
Returns an [FI_GI_Window](#) pointer if this widget is an [FI_GI_Window](#).
- virtual [FI_Group](#) * **as_group** ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * **as_window** ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype](#) **box** () const
Gets the box type of the widget.
- void **box** ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) **callback** () const
Gets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb, void *p)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.

- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FI_Color` bg)
Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)
Sets the background and selection color of the widget.
- `FI_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FI_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- uchar `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FI_Image` * `deimage` ()
Gets the image that is used as part of the widget label.
- const `FI_Image` * `deimage` () const
- void `deimage` (`FI_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FI_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FI_Widget` *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.

- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FI_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FI_Image * image` () const
- void `image` (`FI_Image &img`)
Sets the image to use as part of the widget label.
- void `image` (`FI_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color c`)
Sets the label color.
- `FI_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font f`)
Sets the font to use.
- `FI_Fontsize labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize pix`)
Sets the font size in pixels.
- `FI_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype a`)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.

- virtual void `resize` (int `x`, int `y`, int `w`, int `h`)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` `a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int `W`, int `H`)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *`text`)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &`xoff`, int &`yoff`) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar` `t`)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *`v`)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int `v`)
Modifies keyboard focus navigation.
- int `visible_r` () const

- Returns whether a widget and all its parents are visible.*

 - int `w` () const

Gets the widget width.
 - `FI_When` `when` () const

Returns the conditions under which the callback is called.
 - void `when` (uchar i)

Sets the flags used to decide when a callback is called.
 - `FI_Window` * `window` () const

Returns a pointer to the nearest parent window up the widget hierarchy.
 - int `x` () const

Gets the widget position in its window.
 - int `y` () const

Gets the widget position in its window.
 - virtual `~FI_Widget` ()

Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *cb, void *d)

The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)

Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)

Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {

`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,

flags possible values enumeration.

Protected Member Functions inherited from `FI_Light_Button`

- virtual void `draw` ()

Draws the widget.

Protected Member Functions inherited from `FI_Button`

- void `simulate_key_action` ()

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from FI_Button

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from FI_Button

- static FI_Widget_Tracker * **key_release_tracker** = 0

9.109.1 Constructor & Destructor Documentation

9.109.1.1 FI_Radio_Round_Button()

```
FI_Radio_Round_Button::FI_Radio_Round_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [FI_Radio_Button](#) widget using the given position, size, and label string. The button [type\(\)](#) is set to FL_RADIO_BUTTON.

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- FI_Radio_Round_Button.H
- FI_Round_Button.cxx

9.110 FI_Scroll::FI_Region_LRTB Struct Reference

A local struct to manage a region defined by left/right/top/bottom.

```
#include <Fl_Scroll.H>
```

Public Attributes

- int **b**
(b)ottom "y" position, aka y2
- int **l**
(l)eft "x" position, aka x1
- int **r**
(r)ight "x" position, aka x2
- int **t**
(t)op "y" position, aka y1

9.110.1 Detailed Description

A local struct to manage a region defined by left/right/top/bottom.

The documentation for this struct was generated from the following file:

- FI_Scroll.H

9.111 FI_Scroll::FI_Region_XYWH Struct Reference

A local struct to manage a region defined by xywh.

```
#include <Fl_Scroll.H>
```

Public Attributes

- int **h**
- int **w**
- int **x**
- int **y**

9.111.1 Detailed Description

A local struct to manage a region defined by xywh.

The documentation for this struct was generated from the following file:

- FI_Scroll.H

9.112 FI_Repeat_Button Class Reference

The [FI_Repeat_Button](#) is a subclass of [FI_Button](#) that generates a callback when it is pressed and then repeatedly generates callbacks as long as it is held down.

```
#include <FI_Repeat_Button.H>
```

Inheritance diagram for [FI_Repeat_Button](#):

Public Member Functions

- void **deactivate** ()
- [FI_Repeat_Button](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FI_Repeat_Button](#) widget using the given position, size, and label string.
- int **handle** (int)
Handles the specified event.

Public Member Functions inherited from [FI_Button](#)

- int **clear** ()
Same as `value(0)`.
- [FI_Boxtype](#) **down_box** () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void **down_box** ([FI_Boxtype](#) b)
Sets the down box type.
- [FI_Color](#) **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- [FI_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **set** ()
Same as `value(1)`.
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to `s`.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#), void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0 *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1 *cb](#), long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar c=0](#))
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()

- Disables keyboard focus navigation with this widget.*

 - `FI_Color color () const`
Gets the background color of the widget.
 - `void color (FI_Color bg)`
Sets the background color of the widget.
 - `void color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
 - `FI_Color color2 () const`
For back compatibility only.
 - `void color2 (unsigned a)`
For back compatibility only.
 - `int contains (const FI_Widget *w) const`
Checks if w is a child of this widget.
 - `void copy_label (const char *new_label)`
Sets the current label.
 - `void copy_tooltip (const char *text)`
Sets the current tooltip text.
 - `uchar damage () const`
Returns non-zero if draw() needs to be called.
 - `void damage (uchar c)`
Sets the damage bits for the widget.
 - `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
 - `int damage_resize (int, int, int, int)`
Internal use only.
 - `void deactivate ()`
Deactivates the widget.
 - `FI_Image * deimage ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * deimage () const`
 - `void deimage (FI_Image &img)`
Sets the image to use as part of the widget label.
 - `void deimage (FI_Image *img)`
Sets the image to use as part of the widget label.
 - `void do_callback ()`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
 - `void draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - `int h () const`
Gets the widget height.
 - `virtual void hide ()`
Makes a widget invisible.
 - `FI_Image * image ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * image () const`
 - `void image (FI_Image &img)`
Sets the image to use as part of the widget label.

- void `image` (`FI_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const
Checks if this widget is a child of `wgt`.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color c`)
Sets the label color.
- `FI_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font f`)
Sets the font to use.
- `FI_Fonsize labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize pix`)
Sets the font size in pixels.
- `FI_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype a`)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width `ww` and height `hh` accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

- Marks the value of the widget as changed.*
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.

- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~FI_Widget ()`
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- `static void default_callback (FI_Widget *cb, void *d)`
The default callback for all widgets that don't set a callback.
- `static unsigned int label_shortcut (const char *t)`
Returns the Unicode value of the '&x' shortcut in a given text.
- `static int test_shortcut (const char *, const bool require_alt=false)`
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- `enum {`
`INACTIVE = 1<<0 , INVISIBLE = 1<<1 , OUTPUT = 1<<2 , NOBORDER = 1<<3 ,`
`FORCE_POSITION = 1<<4 , NON_MODAL = 1<<5 , SHORTCUT_LABEL = 1<<6 , CHANGED = 1<<7`
`,`
`OVERRIDE = 1<<8 , VISIBLE_FOCUS = 1<<9 , COPIED_LABEL = 1<<10 , CLIP_CHILDREN = 1<<11`
`,`
`MENU_WINDOW = 1<<12 , TOOLTIP_WINDOW = 1<<13 , MODAL = 1<<14 , NO_OVERLAY = 1<<15`
`,`
`GROUP_RELATIVE = 1<<16 , COPIED_TOOLTIP = 1<<17 , FULLSCREEN = 1<<18 , MAC_USE_ACCENTS_MENU`
`= 1<<19 ,`
`USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 , USERFLAG1 = 1<<31 }`
flags possible values enumeration.

Protected Member Functions inherited from [FI_Button](#)

- `virtual void draw ()`
Draws the widget.
- `void simulate_key_action ()`

Protected Member Functions inherited from [FI_Widget](#)

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.
- `void draw_box (FI_Boxtype t, FI_Color c) const`
Draws a box of type t, of color c at the widget's position and size.
- `void draw_box (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const`
Draws a box of type t, of color c at the position X,Y and size W,H.
- `void draw_focus ()`
draws a focus rectangle around the widget
- `void draw_focus (FI_Boxtype t, int x, int y, int w, int h) const`

- Draws a focus box for the widget at the given position and size.*

 - void `draw_label` () const

Draws the widget's label at the defined label position.

 - void `draw_label` (int, int, int, int) const

Draws the label in an arbitrary bounding box.

 - `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label=0L`)

Creates a widget at the given position and size.

 - unsigned int `flags` () const

Gets the widget flags mask.

 - void `h` (int `v`)

Internal use only.

 - void `set_flag` (unsigned int `c`)

Sets a flag in the flags mask.

 - void `w` (int `v`)

Internal use only.

 - void `x` (int `v`)

Internal use only.

 - void `y` (int `v`)

Internal use only.

Static Protected Member Functions inherited from `FI_Button`

- static void `key_release_timeout` (void *)

Static Protected Attributes inherited from `FI_Button`

- static `FI_Widget_Tracker` * `key_release_tracker` = 0

9.112.1 Detailed Description

The `FI_Repeat_Button` is a subclass of `FI_Button` that generates a callback when it is pressed and then repeatedly generates callbacks as long as it is held down.

The speed of the repeat is fixed and depends on the implementation.

9.112.2 Constructor & Destructor Documentation

9.112.2.1 `FI_Repeat_Button()`

```
FI_Repeat_Button::FI_Repeat_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * I = 0 )
```

Creates a new `FI_Repeat_Button` widget using the given position, size, and label string. The default boxtype is `FL_UP_BOX`. Deletes the button.

9.112.3 Member Function Documentation

9.112.3.1 `handle()`

```
int FI_Repeat_Button::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[FI_Event](#)

Reimplemented from [FI_Button](#).

The documentation for this class was generated from the following files:

- [FI_Repeat_Button.H](#)
- [FI_Repeat_Button.cxx](#)

9.113 FI_Return_Button Class Reference

The [FI_Return_Button](#) is a subclass of [FI_Button](#) that generates a callback when it is pressed or when the user presses the Enter key.

```
#include <FI_Return_Button.H>
```

Inheritance diagram for [FI_Return_Button](#):

Public Member Functions

- [FI_Return_Button](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FI_Return_Button](#) widget using the given position, size, and label string.
- int [handle](#) (int)
Handles the specified event.

Public Member Functions inherited from [FI_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [FI_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([FI_Boxtype](#) b)
Sets the down box type.
- [FI_Color](#) [down_color](#) () const
(for backwards compatibility)
- void [down_color](#) (unsigned c)
(for backwards compatibility)
- [FI_Button](#) (int X, int Y, int W, int H, const char *L=0)

The constructor creates the button using the given position, size, and label.

- int **set** ()
Same as `value (1)`.
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value (1)` or `set ()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to *s*.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from **FI_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align** **align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_GI_Window** * **as_gi_window** ()
Returns an **FI_GI_Window** pointer if this widget is an **FI_GI_Window**.
- virtual **FI_Group** * **as_group** ()
Returns an **FI_Group** pointer if this widget is an **FI_Group**.
- virtual **FI_Window** * **as_window** ()
Returns an **FI_Window** pointer if this widget is an **FI_Window**.
- **FI_Boxtype** **box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p** **callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback0** *cb)

- Sets the current callback function for the widget.*

 - void `callback` (`FI_Callback1 *cb`, long `p=0`)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color color` () const

Gets the background color of the widget.
- void `color` (`FI_Color bg`)

Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)

Sets the background and selection color of the widget.
- `FI_Color color2` () const

For back compatibility only.
- void `color2` (unsigned `a`)

For back compatibility only.
- int `contains` (const `FI_Widget *w`) const

Checks if `w` is a child of this widget.
- void `copy_label` (const char *`new_label`)

Sets the current label.
- void `copy_tooltip` (const char *`text`)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)

Sets the damage bits for the widget.
- void `damage` (`uchar c`, int `x`, int `y`, int `w`, int `h`)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FI_Image * deimage` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)

Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- void `do_callback` ()

- Calls the widget callback.*

 - void `do_callback` (`FI_Widget *o`, long arg)
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget *o`, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `FI_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- virtual void `hide` ()

Makes a widget invisible.
- `FI_Image * image` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * image` () const
- void `image` (`FI_Image &img`)

Sets the image to use as part of the widget label.
- void `image` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.
- void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)

Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const

Gets the label color.
- void `labelcolor` (`FI_Color c`)

Sets the label color.
- `FI_Font labelfont` () const

Gets the font to use.
- void `labelfont` (`FI_Font f`)

Sets the font to use.
- `FI_Fontsize labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize pix`)

Sets the font size in pixels.
- `FI_Labeltype labeltype` () const

Gets the label type.
- void `labeltype` (`FI_Labeltype a`)

Sets the label type.
- void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group * parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)

- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
Repositions the window or widget.
 - void [redraw](#) ()
Schedules the drawing of the widget.
 - void [redraw_label](#) ()
Schedules the drawing of the label.
 - virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
 - [FI_Color selection_color](#) () const
Gets the selection color.
 - void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
 - void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
 - void [set_changed](#) ()
Marks the value of the widget as changed.
 - void [set_output](#) ()
Sets a widget to output only.
 - void [set_visible](#) ()
Makes the widget visible.
 - void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
 - virtual void [show](#) ()
Makes a widget visible.
 - void [size](#) (int W, int H)
Changes the size of the widget.
 - int [take_focus](#) ()
Gives the widget the keyboard focus.
 - unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
 - int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
 - const char * [tooltip](#) () const
Gets the current tooltip text.
 - void [tooltip](#) (const char *text)
Sets the current tooltip text.
 - [FI_Window * top_window](#) () const
Returns a pointer to the top-level window for the widget.
 - [FI_Window * top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
 - [uchar type](#) () const
Gets the widget type.
 - void [type](#) ([uchar](#) t)
Sets the widget type.
 - int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
 - void * [user_data](#) () const
Gets the user data for this widget.
 - void [user_data](#) (void *v)
Sets the user data for this widget.

- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FL_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FL_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FL_Widget` ()
Destroys the widget.

Protected Member Functions

- void `draw` ()
Draws the widget.

Protected Member Functions inherited from `FL_Button`

- void `simulate_key_action` ()

Protected Member Functions inherited from `FL_Widget`

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (`FL_Boxtype` t, `FL_Color` c) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (`FL_Boxtype` t, int x, int y, int w, int h, `FL_Color` c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` ()
draws a focus rectangle around the widget
- void `draw_focus` (`FL_Boxtype` t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.

- [FI_Widget](#) (int *x*, int *y*, int *w*, int *h*, const char **label*=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int *v*)
Internal use only.
- void **set_flag** (unsigned int *c*)
Sets a flag in the flags mask.
- void **w** (int *v*)
Internal use only.
- void **x** (int *v*)
Internal use only.
- void **y** (int *v*)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) **cb*, void **d*)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char **t*)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char **t*, const bool *require_alt*=false)
*Returns true if the given text *t* contains the entered '&x' shortcut.*

Protected Types inherited from [FI_Widget](#)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * **key_release_tracker** = 0

9.113.1 Detailed Description

The [FI_Return_Button](#) is a subclass of [FI_Button](#) that generates a callback when it is pressed or when the user presses the Enter key.

A carriage-return symbol is drawn next to the button label.

Figure 9.25 Fl_Return_Button

9.113.2 Constructor & Destructor Documentation

9.113.2.1 Fl_Return_Button()

```
Fl_Return_Button::Fl_Return_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [Fl_Return_Button](#) widget using the given position, size, and label string. The default boxtype is FL_UP_BOX.

The inherited destructor deletes the button.

9.113.3 Member Function Documentation

9.113.3.1 draw()

```
void Fl_Return_Button::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                          // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Button](#).

9.113.3.2 handle()

```
int Fl_Return_Button::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

- FI_Return_Button.cxx

9.114 FI_RGB_Image Class Reference

The [FI_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

```
#include <FI_Image.H>
```

Inheritance diagram for FI_RGB_Image:

Public Member Functions

- virtual void [color_average](#) ([FI_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [FI_Image](#) * [copy](#) ()
- virtual [FI_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=FL_GRAY)
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const [uchar](#) *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- virtual void [label](#) ([FI_Menu_Item](#) *m)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [label](#) ([FI_Widget](#) *w)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.
- virtual ~[FI_RGB_Image](#) ()
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from FI_Image

- [FI_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const
Returns the current image depth.
- const char *const * [data](#) () const

- Returns a pointer to the current image data array.*
- void **draw** (int X, int Y)
 - Draws the image.*
- int **fail** ()
 - Returns a value that is not 0 if there is currently no image available.*
- **FI_Image** (int W, int H, int D)
 - The constructor creates an empty image with the specified width, height, and depth.*
- int **h** () const
 - Returns the current image height in pixels.*
- void **inactive** ()
 - The **inactive()** method calls `color_average(FL_BACKGROUND_COLOR, 0.33f)` to produce an image that appears grayed out.*
- int **ld** () const
 - Returns the current line data size in bytes.*
- int **w** () const
 - Returns the current image width in pixels.*
- virtual **~FI_Image** ()
 - The destructor is a virtual method that frees all memory used by the image.*

Static Public Member Functions

- static size_t **max_size** ()
 - Returns the maximum allowed image size in bytes when creating an **FI_RGB_Image** object.*
- static void **max_size** (size_t size)
 - Sets the maximum allowed image size in bytes when creating an **FI_RGB_Image** object.*

Static Public Member Functions inherited from **FI_Image**

- static **FI_RGB_Scaling** **RGB_scaling** ()
 - Returns the currently used RGB image scaling method.*
- static void **RGB_scaling** (**FI_RGB_Scaling**)
 - Sets the RGB image scaling method used for `copy(int, int)`.*

Public Attributes

- int **alloc_array**
 - If non-zero, the object's data array is delete[]'d when deleting the object.*
- const uchar * **array**
 - Points to the start of the object's data array.*

Friends

- class **FI_GDI_Graphics_Driver**
- class **FI_GDI_Printer_Graphics_Driver**
- class **FI_Quartz_Graphics_Driver**
- class **FI_Xlib_Graphics_Driver**

Additional Inherited Members

Static Public Attributes inherited from **FI_Image**

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_NO_IMAGE** = -1

Protected Member Functions inherited from FI_Image

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- void **h** (int H)
Sets the current image height in pixels.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the current image width in pixels.

Static Protected Member Functions inherited from FI_Image

- static void **labeltype** (const FI_Label *lo, int lx, int ly, int lw, int lh, FI_Align la)
- static void **measure** (const FI_Label *lo, int &lw, int &lh)

9.114.1 Detailed Description

The [FI_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

Images with an even number of channels are assumed to contain alpha information, which is used to blend the image with the contents of the screen.

[FI_RGB_Image](#) is defined in [<FL/FI_Image.H>](#), however for compatibility reasons [<FL/FI_RGB_Image.H>](#) should be included.

9.114.2 Constructor & Destructor Documentation

9.114.2.1 FI_RGB_Image() [1/2]

```
FI_RGB_Image::FI_RGB_Image (
    const uchar * bits,
    int W,
    int H,
    int D = 3,
    int LD = 0 )
```

The constructor creates a new image from the specified data.

The data array `bits` must contain sufficient data to provide $W * H * D$ image bytes and optional line padding, see `LD`.

`W` and `H` are the width and height of the image in pixels, resp.

`D` is the image depth and can be:

- `D=1`: each `uchar` in `bits[]` is a grayscale pixel value
- `D=2`: each `uchar` pair in `bits[]` is a grayscale + alpha pixel value
- `D=3`: each `uchar` triplet in `bits[]` is an R/G/B pixel value
- `D=4`: each `uchar` quad in `bits[]` is an R/G/B/A pixel value

`LD` specifies the line data size of the array, see [FI_Image::ld\(int\)](#). If `LD` is zero, then $W * D$ is assumed, otherwise `LD` must be greater than or equal to $W * D$ to account for (unused) extra data per line (padding).

The caller is responsible that the image data array `bits` persists as long as the image is used.

This constructor sets [FI_RGB_Image::alloc_array](#) to 0. To have the image object control the deallocation of the data array `bits`, set `alloc_array` to non-zero after construction.

Parameters

in	<i>bits</i>	The image data array.
in	<i>W</i>	The width of the image in pixels.
in	<i>H</i>	The height of the image in pixels.
in	<i>D</i>	The image depth, or 'number of channels' (default=3).
in	<i>LD</i>	Line data size (default=0).

See also

[Fl_Image::data\(\)](#), [Fl_Image::w\(\)](#), [Fl_Image::h\(\)](#), [Fl_Image::d\(\)](#), [Fl_Image::ld\(int\)](#)

9.114.2.2 Fl_RGB_Image() [2/2]

```
Fl_RGB_Image::Fl_RGB_Image (
    const Fl_Pixmap * pxm,
    Fl_Color bg = FL_GRAY )
```

The constructor creates a new RGBA image from the specified [Fl_Pixmap](#).

The RGBA image is built fully opaque except for the transparent area of the pixmap that is assigned the `bg` color with full transparency.

This constructor creates a new internal data array and sets [Fl_RGB_Image::alloc_array](#) to 1 so the data array is deleted when the image is destroyed.

9.114.3 Member Function Documentation

9.114.3.1 color_average()

```
void Fl_RGB_Image::color_average (
    Fl_Color c,
    float i ) [virtual]
```

The [color_average\(\)](#) method averages the colors in the image with the FLTK color value `c`.

The `i` argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from [Fl_Image](#).

9.114.3.2 copy()

```
Fl_Image * Fl_RGB_Image::copy (
    int W,
    int H ) [virtual]
```

The `copy()` method creates a copy of the specified image.

If the width and height are provided, the image is resized to the specified size. The image should be deleted (or in the case of [Fl_Shared_Image](#), released) when you are done with it.

Reimplemented from [Fl_Image](#).

9.114.3.3 desaturate()

```
void Fl_RGB_Image::desaturate ( ) [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from [Fl_Image](#).

9.114.3.4 draw()

```
void Fl_RGB_Image::draw (
    int X,
```

```

    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0 ) [virtual]

```

Draws the image with a bounding box.

Arguments *X*, *Y*, *W*, *H* specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the *cx* and *cy* arguments.

In other words: `fl_push_clip(X,Y,W,H)` is applied, the image is drawn with its upper-left corner at *X-cx*, *Y-cy* and its own width and height, `fl_pop_clip()` is applied.

Reimplemented from [FI_Image](#).

9.114.3.5 label() [1/2]

```

void Fl_RGB_Image::label (
    Fl_Menu_Item * m ) [virtual]

```

The `label()` methods are an obsolete way to set the image attribute of a widget or menu item. Use the `image()` or `deimage()` methods of the [FI_Widget](#) and [FI_Menu_Item](#) classes instead.

Reimplemented from [FI_Image](#).

9.114.3.6 label() [2/2]

```

void Fl_RGB_Image::label (
    Fl_Widget * widget ) [virtual]

```

The `label()` methods are an obsolete way to set the image attribute of a widget or menu item. Use the `image()` or `deimage()` methods of the [FI_Widget](#) and [FI_Menu_Item](#) classes instead.

Reimplemented from [FI_Image](#).

9.114.3.7 max_size() [1/2]

```

static size_t Fl_RGB_Image::max_size ( ) [inline], [static]

```

Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

See also

```

void FI\_RGB\_Image::max\_size\(size\_t\)

```

9.114.3.8 max_size() [2/2]

```

static void Fl_RGB_Image::max_size (
    size_t size ) [inline], [static]

```

Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

The image size in bytes of an [FI_RGB_Image](#) object is the value of the product $w() * h() * d()$. If this product exceeds size, the created object of a derived class of [FI_RGB_Image](#) won't be loaded with the image data. This does not apply to direct RGB image creation with `FI_RGB_Image::FI_RGB_Image(const uchar *bits, int W, int H, int D, int LD)`.

The default `max_size()` value is essentially infinite.

9.114.3.9 uncache()

```

void Fl_RGB_Image::uncache ( ) [virtual]

```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented from [FI_Image](#).

The documentation for this class was generated from the following files:

- [FI_Image.H](#)
- [FI_Image.cxx](#)

9.115 FI_Roller Class Reference

The `FI_Roller` widget is a "dolly" control commonly used to move 3D objects.

```
#include <FI_Roller.H>
```

Inheritance diagram for `FI_Roller`:

Public Member Functions

- `FI_Roller` (int X, int Y, int W, int H, const char *L=0)
Creates a new `FI_Roller` widget using the given position, size, and label string.
- int `handle` (int)
Handles the specified event.

Public Member Functions inherited from `FI_Valuator`

- void `bounds` (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double `clamp` (double)
Clamps the passed value to the valuator range.
- virtual int `format` (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double `increment` (double, int)
Adds n times the step value to the passed value.
- double `maximum` () const
Gets the maximum value for the valuator.
- void `maximum` (double a)
Sets the maximum value for the valuator.
- double `minimum` () const
Gets the minimum value for the valuator.
- void `minimum` (double a)
Sets the minimum value for the valuator.
- void `precision` (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void `range` (double a, double b)
Sets the minimum and maximum values for the valuator.
- double `round` (double)
Round the passed value to the nearest step increment.
- double `step` () const
Gets or sets the step value.
- void `step` (double a, int b)
See double `FI_Valuator::step()` const
- void `step` (double s)
See double `FI_Valuator::step()` const.
- void `step` (int a)

See double [FI_Valuator::step\(\)](#) const

- double [value](#) () const
Gets the floating point(double) value.
- int [value](#) (double)
Sets the current value.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#), void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0 *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1 *cb](#), long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.

- void `clear_damage` (`uchar c=0`)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color color` () const
Gets the background color of the widget.
- void `color` (`FI_Color bg`)
Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)
Sets the background and selection color of the widget.
- `FI_Color color2` () const
For back compatibility only.
- void `color2` (`unsigned a`)
For back compatibility only.
- int `contains` (`const FI_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (`const char *new_label`)
Sets the current label.
- void `copy_tooltip` (`const char *text`)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)
Sets the damage bits for the widget.
- void `damage` (`uchar c`, `int x`, `int y`, `int w`, `int h`)
Sets the damage bits for an area inside the widget.
- int **`damage_resize`** (`int`, `int`, `int`, `int`)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FI_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)
Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image *img`)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FI_Widget *o`, `long arg`)
Calls the widget callback.
- void `do_callback` (`FI_Widget *o`, `void *arg=0`)
Calls the widget callback.
- void `draw_label` (`int`, `int`, `int`, `int`, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.

- virtual void `hide ()`
Makes a widget invisible.
- `FI_Image * image ()`
Gets the image that is used as part of the widget label.
- const `FI_Image * image () const`
- void `image (FI_Image &img)`
Sets the image to use as part of the widget label.
- void `image (FI_Image *img)`
Sets the image to use as part of the widget label.
- int `inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- int `is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- const char * `label () const`
Gets the current label text.
- void `label (const char *text)`
Sets the current label pointer.
- void `label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`
Gets the label color.
- void `labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- void `labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fontsize labelsize () const`
Gets the font size in pixels.
- void `labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- void `labeltype (FI_Labeltype a)`
Sets the label type.
- void `measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- unsigned int `output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.
- void `parent (FI_Group *p)`
Internal use only - "for hacks only".
- void `position (int X, int Y)`
Repositions the window or widget.
- void `redraw ()`
Schedules the drawing of the widget.
- void `redraw_label ()`
Schedules the drawing of the label.
- virtual void `resize (int x, int y, int w, int h)`
Changes the size or position of the widget.

- `FI_Color selection_color ()` const
Gets the selection color.
- `void selection_color (FI_Color a)`
Sets the selection color.
- `void set_active ()`
Marks the widget as active without sending events or changing focus.
- `void set_changed ()`
Marks the value of the widget as changed.
- `void set_output ()`
Sets a widget to output only.
- `void set_visible ()`
Makes the widget visible.
- `void set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- `virtual void show ()`
Makes a widget visible.
- `void size (int W, int H)`
Changes the size of the widget.
- `int take_focus ()`
Gives the widget the keyboard focus.
- `unsigned int takeevents ()` const
Returns if the widget is able to take events.
- `int test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- `const char * tooltip ()` const
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `FI_Window * top_window ()` const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset (int &xoff, int &yoff)` const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type ()` const
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data ()` const
Gets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `unsigned int visible ()` const
Returns whether a widget is visible.
- `unsigned int visible_focus ()`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r ()` const
Returns whether a widget and all its parents are visible.
- `int w ()` const

- Gets the widget width.*
- [FI_When](#) `when` () const
 - Returns the conditions under which the callback is called.*
- void `when` (uchar i)
 - Sets the flags used to decide when a callback is called.*
- [FI_Window](#) * `window` () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int `x` () const
 - Gets the widget position in its window.*
- int `y` () const
 - Gets the widget position in its window.*
- virtual [~FI_Widget](#) ()
 - Destroys the widget.*

Protected Member Functions

- void `draw` ()
 - Draws the widget.*

Protected Member Functions inherited from [FI_Valuator](#)

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
 - Creates a new [FI_Valuator](#) widget using the given position, size, and label string.*
- void `handle_drag` (double newvalue)
 - Called during a drag operation, after an `FL_WHEN_CHANGED` event is received and before the callback.*
- void `handle_push` ()
 - Stores the current value in the previous value.*
- void `handle_release` ()
 - Called after an `FL_WHEN_RELEASE` event is received and before the callback.*
- int `horizontal` () const
 - Tells if the valuator is an `FL_HORIZONTAL` one.*
- double `previous_value` () const
 - Gets the previous floating point value before an event changed it.*
- void `set_value` (double v)
 - Sets the current floating point value.*
- double `softclamp` (double)
 - Clamps the value, but accepts v if the previous value is not already out of range.*
- virtual void `value_damage` ()
 - Asks for partial redraw.*

Protected Member Functions inherited from [FI_Widget](#)

- void `clear_flag` (unsigned int c)
 - Clears a flag in the flags mask.*
- void `draw_backdrop` () const
 - If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.*
- void `draw_box` () const
 - Draws the widget box according its box style.*
- void `draw_box` ([FI_Boxtype](#) t, [FI_Color](#) c) const
 - Draws a box of type t, of color c at the widget's position and size.*
- void `draw_box` ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
 - Draws a box of type t, of color c at the position X,Y and size W,H.*

- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
, **OVERRIDE** = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
, **MENU_WINDOW** = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15
, **GROUP_RELATIVE** = 1<<16 , **COPIED_TOOLTIP** = 1<<17 , **FULLSCREEN** = 1<<18 , **MAC_USE_ACCENTS_MENU**
= 1<<19 ,
USERFLAG3 = 1<<29 , **USERFLAG2** = 1<<30 , **USERFLAG1** = 1<<31 }
flags possible values enumeration.

9.115.1 Detailed Description

The `Fl_Roller` widget is a "dolly" control commonly used to move 3D objects.

Figure 9.26 Fl_Roller

9.115.2 Constructor & Destructor Documentation

9.115.2.1 Fl_Roller()

```
Fl_Roller::Fl_Roller (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new `Fl_Roller` widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

Inherited destructor destroys the valuator.

9.115.3 Member Function Documentation

9.115.3.1 draw()

```
void Fl_Roller::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call `redraw()` instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because `draw()` is virtual) like this:

```
Fl_Widget *s = &scroll; // scroll is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Implements `Fl_Widget`.

9.115.3.2 handle()

```
int Fl_Roller::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[FI_Event](#)

Reimplemented from [FI_Widget](#).

The documentation for this class was generated from the following files:

- FI_Roller.H
- FI_Roller.cxx

9.116 FI_Round_Button Class Reference

Buttons generate callbacks when they are clicked by the user.

```
#include <FI_Round_Button.H>
```

Inheritance diagram for FI_Round_Button:

Public Member Functions

- [FI_Round_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Round_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from FI_Light_Button

- [FI_Light_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Light_Button](#) widget using the given position, size, and label string.
- virtual int [handle](#) (int)
Handles the specified event.

Public Member Functions inherited from FI_Button

- int [clear](#) ()
Same as `value(0)`.
- [FI_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([FI_Boxtype](#) b)
Sets the down box type.
- [FI_Color](#) [down_color](#) () const

- (for backwards compatibility)
- void **down_color** (unsigned c)
 - (for backwards compatibility)
- **FI_Button** (int X, int Y, int W, int H, const char *L=0)
 - The constructor creates the button using the given position, size, and label.
- int **set** ()
 - Same as `value(1)`.
- void **setonly** ()
 - Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int **shortcut** () const
 - Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
 - (for backwards compatibility)
- void **shortcut** (int s)
 - Sets the shortcut key to `s`.
- char **value** () const
 - Returns the current value of the button (0 or 1).
- int **value** (int v)
 - Sets the current value of the button.

Public Member Functions inherited from **FI_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.
- unsigned int **active** () const
 - Returns whether the widget is active.
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
 - Gets the label alignment.
- void **align** (**FI_Align** alignment)
 - Sets the label alignment.
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_GI_Window** * **as_gi_window** ()
 - Returns an **FI_GI_Window** pointer if this widget is an **FI_GI_Window**.
- virtual **FI_Group** * **as_group** ()
 - Returns an **FI_Group** pointer if this widget is an **FI_Group**.
- virtual **FI_Window** * **as_window** ()
 - Returns an **FI_Window** pointer if this widget is an **FI_Window**.
- **FI_Boxtype box** () const
 - Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
 - Sets the box type for the widget.
- **FI_Callback_p** **callback** () const
 - Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)

- Sets the current callback function for the widget.*

 - void `callback` (`FI_Callback` *cb, void *p)
- Sets the current callback function for the widget.*

 - void `callback` (`FI_Callback0` *cb)
- Sets the current callback function for the widget.*

 - void `callback` (`FI_Callback1` *cb, long p=0)
- Sets the current callback function for the widget.*

 - unsigned int `changed` () const
- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()
- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (`uchar` c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FI_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (`FI_Color` bg)
- Sets the background color of the widget.*

 - void `color` (`FI_Color` bg, `FI_Color` sel)
- Sets the background and selection color of the widget.*

 - `FI_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const `FI_Widget` *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (`uchar` c)
- Sets the damage bits for the widget.*

 - void `damage` (`uchar` c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FI_Image` * `deimage` ()
- Gets the image that is used as part of the widget label.*

 - const `FI_Image` * `deimage` () const
- void `deimage` (`FI_Image` &img)

- Sets the image to use as part of the widget label.*

 - void `deimage` (`Fl_Image *img`)
- Sets the image to use as part of the widget label.*

 - void `do_callback` ()
- Calls the widget callback.*

 - void `do_callback` (`Fl_Widget *o`, long arg)
- Calls the widget callback.*

 - void `do_callback` (`Fl_Widget *o`, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `Fl_Align`) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int `h` () const
- Gets the widget height.*

 - virtual void `hide` ()
- Makes a widget invisible.*

 - `Fl_Image * image` ()
- Gets the image that is used as part of the widget label.*

 - const `Fl_Image * image` () const
- void `image` (`Fl_Image &img`)
- Sets the image to use as part of the widget label.*

 - void `image` (`Fl_Image *img`)
- Sets the image to use as part of the widget label.*

 - int `inside` (const `Fl_Widget *wgt`) const
- Checks if this widget is a child of wgt.*

 - int `is_label_copied` () const
- Returns whether the current label was assigned with `copy_label()`.*

 - const char * `label` () const
- Gets the current label text.*

 - void `label` (const char *text)
- Sets the current label pointer.*

 - void `label` (`Fl_Labeltype a`, const char *b)
- Shortcut to set the label text and type in one call.*

 - `Fl_Color labelcolor` () const
- Gets the label color.*

 - void `labelcolor` (`Fl_Color c`)
- Sets the label color.*

 - `Fl_Font labelfont` () const
- Gets the font to use.*

 - void `labelfont` (`Fl_Font f`)
- Sets the font to use.*

 - `Fl_Fontsize labelsize` () const
- Gets the font size in pixels.*

 - void `labelsize` (`Fl_Fontsize pix`)
- Sets the font size in pixels.*

 - `Fl_Labeltype labeltype` () const
- Gets the label type.*

 - void `labeltype` (`Fl_Labeltype a`)
- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - unsigned int `output` () const

- Returns if a widget is used for output only.*

 - `FI_Group * parent () const`
Returns a pointer to the parent widget.
 - `void parent (FI_Group *p)`
Internal use only - "for hacks only".
 - `void position (int X, int Y)`
Repositions the window or widget.
 - `void redraw ()`
Schedules the drawing of the widget.
 - `void redraw_label ()`
Schedules the drawing of the label.
 - `virtual void resize (int x, int y, int w, int h)`
Changes the size or position of the widget.
 - `FI_Color selection_color () const`
Gets the selection color.
 - `void selection_color (FI_Color a)`
Sets the selection color.
 - `void set_active ()`
Marks the widget as active without sending events or changing focus.
 - `void set_changed ()`
Marks the value of the widget as changed.
 - `void set_output ()`
Sets a widget to output only.
 - `void set_visible ()`
Makes the widget visible.
 - `void set_visible_focus ()`
Enables keyboard focus navigation with this widget.
 - `virtual void show ()`
Makes a widget visible.
 - `void size (int W, int H)`
Changes the size of the widget.
 - `int take_focus ()`
Gives the widget the keyboard focus.
 - `unsigned int takeevents () const`
Returns if the widget is able to take events.
 - `int test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
 - `const char * tooltip () const`
Gets the current tooltip text.
 - `void tooltip (const char *text)`
Sets the current tooltip text.
 - `FI_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
 - `FI_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
 - `uchar type () const`
Gets the widget type.
 - `void type (uchar t)`
Sets the widget type.
 - `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.

- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Light_Button](#)

- virtual void [draw](#) ()
Draws the widget.

Protected Member Functions inherited from [FI_Button](#)

- void [simulate_key_action](#) ()

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If [FL_ALIGN_IMAGE_BACKDROP](#) is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Static Protected Member Functions inherited from [FI_Button](#)

- static void [key_release_timeout](#) (void *)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * [key_release_tracker](#) = 0

9.116.1 Detailed Description

Buttons generate callbacks when they are clicked by the user. You control exactly when and how by changing the values for `type()` and `when()`.
P

Figure 9.27 Fl_Round_Button

The `Fl_Round_Button` subclass display the "on" state by turning on a light, rather than drawing pushed in. The shape of the "light" is initially set to `FL_ROUND_DOWN_BOX`. The color of the light when on is controlled with `selection_color()`, which defaults to `FL_FOREGROUND_COLOR`.

9.116.2 Constructor & Destructor Documentation

9.116.2.1 Fl_Round_Button()

```
Fl_Round_Button::Fl_Round_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new `Fl_Round_Button` widget using the given position, size, and label string.

Figure 9.28 Fl_Round_Button

The `Fl_Round_Button` subclass displays the "ON" state by turning on a light, rather than drawing pushed in. The default box type is `FL_NO_BOX`, which draws the label w/o a box right of the checkmark. The shape of the "light" is set with `down_box()` and its default value is `FL_ROUND_DOWN_BOX`. The color of the light when on is controlled with `selection_color()`, which defaults to `FL_FOREGROUND_COLOR` (usually black).

Parameters

in	<code>X,Y,W,H</code>	position and size of the widget
in	<code>L</code>	widget label, default is no label

The documentation for this class was generated from the following files:

- `Fl_Round_Button.H`
- `Fl_Round_Button.cxx`

9.117 Fl_Round_Clock Class Reference

A clock widget of type `FL_ROUND_CLOCK`.

```
#include <Fl_Round_Clock.H>
```

Inheritance diagram for `Fl_Round_Clock`:

Public Member Functions

- **FI_Round_Clock** (int X, int Y, int W, int H, const char *L=0)
Creates the clock widget, setting his type and box.

Public Member Functions inherited from [FI_Clock](#)

- [FI_Clock](#) (int X, int Y, int W, int H, const char *L=0)
Create an [FI_Clock](#) widget using the given position, size, and label string.
- [FI_Clock](#) (uchar t, int X, int Y, int W, int H, const char *L)
Create an [FI_Clock](#) widget using the given boxtype, position, size, and label string.
- int [handle](#) (int)
Handles the specified event.
- [~FI_Clock](#) ()
The destructor removes the clock.

Public Member Functions inherited from [FI_Clock_Output](#)

- [FI_Clock_Output](#) (int X, int Y, int W, int H, const char *L=0)
Create a new [FI_Clock_Output](#) widget with the given position, size and label.
- int [hour](#) () const
Returns the displayed hour (0 to 23).
- int [minute](#) () const
Returns the displayed minute (0 to 59).
- int [second](#) () const
Returns the displayed second (0 to 60, 60=leap second).
- [ulong value](#) () const
Returns the displayed time.
- void [value](#) (int H, int m, int s)
Set the displayed time.
- void [value](#) (ulong v)
Set the displayed time.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const

- Returns whether the widget and all of its parents are active.*

 - `FI_Align align () const`
Gets the label alignment.
 - `void align (FI_Align alignment)`
Sets the label alignment.
 - `long argument () const`
Gets the current user data (long) argument that is passed to the callback function.
 - `void argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.
 - virtual class `FI_Gl_Window * as_gl_window ()`
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
 - virtual `FI_Group * as_group ()`
Returns an `FI_Group` pointer if this widget is an `FI_Group`.
 - virtual `FI_Window * as_window ()`
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
 - `FI_Boxtype box () const`
Gets the box type of the widget.
 - `void box (FI_Boxtype new_box)`
Sets the box type for the widget.
 - `FI_Callback_p callback () const`
Gets the current callback function for the widget.
 - `void callback (FI_Callback *cb)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback *cb, void *p)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback0 *cb)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback1 *cb, long p=0)`
Sets the current callback function for the widget.
 - `unsigned int changed () const`
Checks if the widget value changed since the last callback.
 - `void clear_active ()`
Marks the widget as inactive without sending events or changing focus.
 - `void clear_changed ()`
Marks the value of the widget as unchanged.
 - `void clear_damage (uchar c=0)`
Clears or sets the damage flags.
 - `void clear_output ()`
Sets a widget to accept input.
 - `void clear_visible ()`
Hides the widget.
 - `void clear_visible_focus ()`
Disables keyboard focus navigation with this widget.
 - `FI_Color color () const`
Gets the background color of the widget.
 - `void color (FI_Color bg)`
Sets the background color of the widget.
 - `void color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
 - `FI_Color color2 () const`
For back compatibility only.

- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * deimage` () const
- void `deimage` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)

- Sets the current label pointer.*

 - void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.

- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) ()
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void `default_callback` (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Clock_Output

- void `draw` ()
Draw clock with current position and size.
- void `draw` (int X, int Y, int W, int H)
Draw clock with the given position and size.

Protected Member Functions inherited from FI_Widget

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` ()
draws a focus rectangle around the widget
- void `draw_focus` (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)

- *Creates a widget at the given position and size.*
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.117.1 Detailed Description

A clock widget of type FL_ROUND_CLOCK.

Has no box.

The documentation for this class was generated from the following files:

- FI_Round_Clock.H
- FI_Clock.cxx

9.118 FI_Scroll Class Reference

This container widget lets you maneuver around a set of widgets much larger than your window.

```
#include <Fl_Scroll.H>
```

Inheritance diagram for FI_Scroll:

Classes

- struct [FI_Region_LRTB](#)
A local struct to manage a region defined by left/right/top/bottom.
- struct [FI_Region_XYWH](#)
A local struct to manage a region defined by xywh.
- struct [FI_Scrollbar_Data](#)
A local struct to manage a scrollbar's xywh region and tab values.
- struct [ScrollInfo](#)
Structure to manage scrollbar and widget interior sizes.

Public Types

- enum {
HORIZONTAL = 1 , **VERTICAL** = 2 , **BOTH** = 3 , **ALWAYS_ON** = 4 ,
HORIZONTAL_ALWAYS = 5 , **VERTICAL_ALWAYS** = 6 , **BOTH_ALWAYS** = 7 }

Public Member Functions

- void **clear** ()
Clear all but the scrollbars...
- **FL_Scroll** (int X, int Y, int W, int H, const char *l=0)
Creates a new [FL_Scroll](#) widget using the given position, size, and label string.
- int **handle** (int)
Handles the specified event.
- void **resize** (int X, int Y, int W, int H)
Resizes the [FL_Scroll](#) widget and moves its children if necessary.
- void **scroll_to** (int, int)
Moves the contents of the scroll group to a new position.
- int **scrollbar_size** () const
Gets the current size of the scrollbars' troughs, in pixels.
- void **scrollbar_size** (int newSize)
*Sets the pixel size of the scrollbars' troughs to *newSize*, in pixels.*
- int **xposition** () const
Gets the current horizontal scrolling position.
- int **yposition** () const
Gets the current vertical scrolling position.

Public Member Functions inherited from [FL_Group](#)

- **FL_Widget** *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- virtual [FL_Group](#) * **as_group** ()
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns `array()[n]`.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void **end** ()
Exactly the same as `current(this->parent())`.
- int **find** (const [FL_Widget](#) &o) const
*See `int FL_Group::find\(const FL_Widget *w\) const`.*
- int **find** (const [FL_Widget](#) *) const

- Searches the child array for the widget and returns the index.*
- `FL_Group` (int, int, int, int, const char **l*)
 - Creates a new FL_Group widget using the given position, size, and label string.*
- void `focus` (`FL_Widget` **w*)
- void `forms_end` ()
 - This is for forms compatibility only.*
- void `init_sizes` ()
 - Resets the internal array of widget sizes and positions.*
- void `insert` (`FL_Widget` &, int *i*)
 - The widget is removed from its current group (if any) and then inserted into this group.*
- void `insert` (`FL_Widget` &*o*, `FL_Widget` **before*)
 - This does insert(*w*, find(*before*)).*
- void `remove` (`FL_Widget` &)
 - Removes a widget from the group but does not delete it.*
- void `remove` (`FL_Widget` **o*)
 - Removes the widget *o* from the group.*
- void `remove` (int *index*)
 - Removes the widget at *index* from the group but does not delete it.*
- `FL_Widget` * `resizable` () const
 - See void FL_Group::resizable(FL_Widget **box*)*
- void `resizable` (`FL_Widget` &*o*)
 - See void FL_Group::resizable(FL_Widget **box*)*
- void `resizable` (`FL_Widget` **o*)
 - The resizable widget defines the resizing box for the group.*
- virtual `~FL_Group` ()
 - The destructor also deletes all the children.*

Public Member Functions inherited from `FL_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
 - Activates the widget.*
- unsigned int `active` () const
 - Returns whether the widget is active.*
- int `active_r` () const
 - Returns whether the widget and all of its parents are active.*
- `FL_Align` `align` () const
 - Gets the label alignment.*
- void `align` (`FL_Align` *alignment*)
 - Sets the label alignment.*
- long `argument` () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void `argument` (long *v*)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class `FL_Gl_Window` * `as_gl_window` ()
 - Returns an FL_Gl_Window pointer if this widget is an FL_Gl_Window.*
- virtual `FL_Window` * `as_window` ()
 - Returns an FL_Window pointer if this widget is an FL_Window.*
- `FL_Boxtype` `box` () const
 - Gets the box type of the widget.*

- void `box` (`FI_Boxtype` new_box)
Sets the box type for the widget.
- `FI_Callback_p` `callback` () const
Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, void *p)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0` *cb)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FI_Color` bg)
Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)
Sets the background and selection color of the widget.
- `FI_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FI_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()

- Deactivates the widget.*

 - [FI_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label.
- const [FI_Image](#) * **[deimage](#)** () const
- void [deimage](#) ([FI_Image](#) &img)
- Sets the image to use as part of the widget label.*

 - void [deimage](#) ([FI_Image](#) *img)

Sets the image to use as part of the widget label.
- void [do_callback](#) ()
- Calls the widget callback.*

 - void [do_callback](#) ([FI_Widget](#) *o, long arg)

Calls the widget callback.
- void [do_callback](#) ([FI_Widget](#) *o, void *arg=0)
- Calls the widget callback.*

 - void [draw_label](#) (int, int, int, int, [FI_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
- Gets the widget height.*

 - virtual void [hide](#) ()

Makes a widget invisible.
- [FI_Image](#) * [image](#) ()
- Gets the image that is used as part of the widget label.*

 - const [FI_Image](#) * **[image](#)** () const
- void [image](#) ([FI_Image](#) &img)
- Sets the image to use as part of the widget label.*

 - void [image](#) ([FI_Image](#) *img)

Sets the image to use as part of the widget label.
- int [inside](#) (const [FI_Widget](#) *wgt) const
- Checks if this widget is a child of wgt.*

 - int [is_label_copied](#) () const

Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
- Gets the current label text.*

 - void [label](#) (const char *text)

Sets the current label pointer.
- void [label](#) ([FI_Labeltype](#) a, const char *b)
- Shortcut to set the label text and type in one call.*

 - [FI_Color](#) [labelcolor](#) () const

Gets the label color.
- void [labelcolor](#) ([FI_Color](#) c)
- Sets the label color.*

 - [FI_Font](#) [labelfont](#) () const

Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
- Sets the font to use.*

 - [FI_Fontsize](#) [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)
- Sets the font size in pixels.*

 - [FI_Labeltype](#) [labeltype](#) () const

Gets the label type.

- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)

- Sets the widget type.*

 - int **use_accents_menu** ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
 - void * **user_data** () const
 - Gets the user data for this widget.*
 - void **user_data** (void *v)
 - Sets the user data for this widget.*
 - unsigned int **visible** () const
 - Returns whether a widget is visible.*
 - unsigned int **visible_focus** ()
 - Checks whether this widget has a visible focus.*
 - void **visible_focus** (int v)
 - Modifies keyboard focus navigation.*
 - int **visible_r** () const
 - Returns whether a widget and all its parents are visible.*
 - int **w** () const
 - Gets the widget width.*
 - **FI_When when** () const
 - Returns the conditions under which the callback is called.*
 - void **when** (uchar i)
 - Sets the flags used to decide when a callback is called.*
 - **FI_Window * window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
 - int **x** () const
 - Gets the widget position in its window.*
 - int **y** () const
 - Gets the widget position in its window.*
 - virtual **~FI_Widget** ()
 - Destroys the widget.*

Public Attributes

- **FI_Scrollbar hscrollbar**
- **FI_Scrollbar scrollbar**

Protected Member Functions

- void **bbox** (int &, int &, int &, int &)
 - Returns the bounding box for the interior of the scrolling area, inside the scrollbars.*
- void **draw** ()
 - Draws the widget.*
- void **recalc_scrollbars** (ScrollInfo &si)
 - Calculate visibility/size/position of scrollbars, find children's bounding box.*

Protected Member Functions inherited from **FI_Group**

- void **draw_child** (FI_Widget &widget) const
 - Forces a child to redraw.*
- void **draw_children** ()
 - Draws all children of the group.*
- void **draw_outside_label** (const FI_Widget &widget) const
 - Parents normally call this to draw outside labels of child widgets.*

- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FI_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Group

- static FI_Group * **current** ()
Returns the currently active group.
- static void **current** (FI_Group *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15

flags possible values enumeration.

9.118.1 Detailed Description

This container widget lets you maneuver around a set of widgets much larger than your window. If the child widgets are larger than the size of this object then scrollbars will appear so that you can scroll over to them:

Figure 9.29 [FI_Scroll](#)

If all of the child widgets are packed together into a solid rectangle then you want to set [box\(\)](#) to [FL_NO_BOX](#) or one of the [_FRAME](#) types. This will result in the best output. However, if the child widgets are a sparse arrangement you must set [box\(\)](#) to a real [_BOX](#) type. This can result in some blinking during redrawing, but that can be solved by using a [FI_Double_Window](#).

By default you can scroll in both directions, and the scrollbars disappear if the data will fit in the area of the scroll. Use [FI_Scroll::type\(\)](#) to change this as follows :

- 0 - No scrollbars
- [FI_Scroll::HORIZONTAL](#) - Only a horizontal scrollbar.
- [FI_Scroll::VERTICAL](#) - Only a vertical scrollbar.
- [FI_Scroll::BOTH](#) - The default is both scrollbars.
- [FI_Scroll::HORIZONTAL_ALWAYS](#) - Horizontal scrollbar always on, vertical always off.
- [FI_Scroll::VERTICAL_ALWAYS](#) - Vertical scrollbar always on, horizontal always off.
- [FI_Scroll::BOTH_ALWAYS](#) - Both always on.

Use `scrollbar.align(int)` (see void [FI_Widget::align\(FI_Align\)](#)) : to change what side the scrollbars are drawn on.

If the `FL_ALIGN_LEFT` bit is on, the vertical scrollbar is on the left. If the `FL_ALIGN_TOP` bit is on, the horizontal scrollbar is on the top. Note that only the alignment flags in `scrollbar` are considered. The flags in `hscrollbar` however are ignored.

This widget can also be used to pan around a single child widget "canvas". This child widget should be of your own class, with a `draw()` method that draws the contents. The scrolling is done by changing the `x()` and `y()` of the widget, so this child must use the `x()` and `y()` to position its drawing. To speed up drawing it should test `fl_not_clipped(int x,int y,int w,int h)` to find out if a particular area of the widget must be drawn.

Another very useful child is a single [FI_Pack](#), which is itself a group that packs its children together and changes size to surround them. Filling the [FI_Pack](#) with [FI_Tabs](#) groups (and then putting normal widgets inside those) gives you a very powerful scrolling list of individually-openable panels.

Fluid lets you create these, but you can only lay out objects that fit inside the [FI_Scroll](#) without scrolling. Be sure to leave space for the scrollbars, as Fluid won't show these either.

You cannot use [FI_Window](#) as a child of this since the clipping is not conveyed to it when drawn, and it will draw over the scrollbars and neighboring objects.

9.118.2 Constructor & Destructor Documentation

9.118.2.1 FI_Scroll()

```
Fl_Scroll::Fl_Scroll (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [FI_Scroll](#) widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the [FI_Scroll](#) and all of its children can be automatic (local) variables, but you must declare the [FI_Scroll](#) *first*, so that it is destroyed last.

9.118.3 Member Function Documentation

9.118.3.1 bbox()

```
void Fl_Scroll::bbox (
    int & X,
    int & Y,
    int & W,
    int & H ) [protected]
```

Returns the bounding box for the interior of the scrolling area, inside the scrollbars.

Currently this is only reliable after `draw()`, and before any resizing of the [FI_Scroll](#) or any child widgets occur.

Todo The visibility of the scrollbars ought to be checked/calculated outside of the `draw()` method (STR #1895).

9.118.3.2 draw()

```
void Fl_Scroll::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call `redraw()` instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because `draw()` is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                         // calls Fl_Scrollbar::draw()
```

Reimplemented from [FI_Group](#).

9.118.3.3 handle()

```
int Fl_Scroll::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget. When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise. Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

9.118.3.4 recalc_scrollbars()

```
void Fl_Scroll::recalc_scrollbars (
    ScrollInfo & si ) [protected]
```

Calculate visibility/size/position of scrollbars, find children's bounding box.

The *si* parameter will be filled with data from the calculations. Derived classes can make use of this call to figure out the scrolling area eg. during [resize\(\)](#) handling.

Parameters

in, out	<i>si</i>	– ScrollInfo structure
---------	-----------	--

9.118.3.5 resize()

```
void Fl_Scroll::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Resizes the [Fl_Scroll](#) widget and moves its children if necessary.

The [Fl_Scroll](#) widget first resizes itself, and then it moves all its children if (and only if) the [Fl_Scroll](#) widget has been moved. The children are moved by the same amount as the [Fl_Scroll](#) widget has been moved, hence all children keep their relative positions.

Note

[Fl_Scroll::resize\(\)](#) does **not** call [Fl_Group::resize\(\)](#), and child widgets are **not** resized.

Since children of an [Fl_Scroll](#) are not resized, the [resizable\(\)](#) widget is ignored (if it is set).

The scrollbars are moved to their proper positions, as given by [Fl_Scroll::scrollbar.align\(\)](#), and switched on or off as necessary.

Note

Due to current (FLTK 1.3.x) implementation constraints some of this may effectively be postponed until the [Fl_Scroll](#) is drawn the next time. This may change in a future release.

See also

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

9.118.3.6 scroll_to()

```
void Fl_Scroll::scroll_to (
    int X,
    int Y )
```

Moves the contents of the scroll group to a new position.

This is like moving the scrollbars of the [Fl_Scroll](#) around. For instance:

```
Fl_Scroll scroll (10,10,200,200);
Fl_Box b1 ( 10, 10,50,50, "b1"); // relative (x,y) = (0,0)
Fl_Box b2 ( 60, 60,50,50, "b2"); // relative (x,y) = (50,50)
Fl_Box b3 ( 60,110,50,50, "b3"); // relative (x,y) = (50,100)
// populate scroll with more children ...
scroll.end();
scroll.scroll_to(50,100);
```

will move the logical origin of the internal scroll area to (-50,-100) relative to the origin of the [Fl_Scroll](#) (10,10), i.e. [Fl_Box](#) b3 will be visible in the top left corner of the scroll area.

9.118.3.7 scrollbar_size() [1/2]

```
int Fl_Scroll::scrollbar_size ( ) const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

9.118.3.8 scrollbar_size() [2/2]

```
void Fl_Scroll::scrollbar_size (
    int newSize ) [inline]
```

Sets the pixel size of the scrollbars' troughs to *newSize*, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting *newSize* to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

in	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
----	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

9.118.3.9 xposition()

```
int Fl_Scroll::xposition ( ) const [inline]
```

Gets the current horizontal scrolling position.

9.118.3.10 yposition()

```
int Fl_Scroll::yposition ( ) const [inline]
```

Gets the current vertical scrolling position.

The documentation for this class was generated from the following files:

- Fl_Scroll.H
- Fl_Scroll.cxx

9.119 Fl_Scrollbar Class Reference

The [Fl_Scrollbar](#) widget displays a slider with arrow buttons at the ends of the scrollbar.

```
#include <Fl_Scrollbar.H>
```

Inheritance diagram for Fl_Scrollbar:

Public Member Functions

- [Fl_Scrollbar](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Scrollbar](#) widget with given position, size, and label.
- int [handle](#) (int)
Handles the specified event.
- int [linesize](#) () const
Get the size of step, in lines, that the arrow keys move.
- void [linesize](#) (int i)
This number controls how big the steps are that the arrow keys do.
- int [value](#) () const
Gets the integer value (position) of the slider in the scrollbar.
- int [value](#) (int p)
Sets the value (position) of the slider in the scrollbar.
- int [value](#) (int pos, int windowSize, int first, int total)
Sets the position, size and range of the slider in the scrollbar.
- [~Fl_Scrollbar](#) ()
Destroys the Scrollbar.

Public Member Functions inherited from FI_Slider

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **FI_Slider** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Slider widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new FI_Slider widget using the given type, position, size, and label string.
- int **handle** (int)
Handles the specified event.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- **FI_Boxtype slider** () const
Gets the slider box type.
- void **slider** (FI_Boxtype c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double FI_Valuator::step() const
- void **step** (double s)
See double FI_Valuator::step() const.

- void **step** (int a)
See double [FI_Valuator::step\(\)](#) const
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * **as_group** ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * **as_window** ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype](#) **box** () const
Gets the box type of the widget.
- void **box** ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) **callback** () const
Gets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb, void *p)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()

- Marks the value of the widget as unchanged.*

 - void `clear_damage` (`uchar c=0`)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color color` () const

Gets the background color of the widget.
- void `color` (`FI_Color bg`)

Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)

Sets the background and selection color of the widget.
- `FI_Color color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget *w`) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)

Sets the damage bits for the widget.
- void `damage` (`uchar c`, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FI_Image * deimage` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)

Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- void `do_callback` ()

Calls the widget callback.
- void `do_callback` (`FI_Widget *o`, long arg)

Calls the widget callback.
- void `do_callback` (`FI_Widget *o`, void *arg=0)

Calls the widget callback.
- void `draw_label` (int, int, int, int, `FI_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

- Gets the widget height.*

 - virtual void `hide` ()
- Makes a widget invisible.*

 - `FI_Image * image` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * image` () const
- void `image` (`FI_Image &img`)
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const
- Checks if this widget is a child of `wgt`.*

 - int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
- Gets the current label text.*

 - void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)
- Shortcut to set the label text and type in one call.*

 - `FI_Color labelcolor` () const

Gets the label color.
- void `labelcolor` (`FI_Color c`)
- Sets the label color.*

 - `FI_Font labelfont` () const

Gets the font to use.
- void `labelfont` (`FI_Font f`)
- Sets the font to use.*

 - `FI_Fonsize labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize pix`)
- Sets the font size in pixels.*

 - `FI_Labeltype labeltype` () const

Gets the label type.
- void `labeltype` (`FI_Labeltype a`)
- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width `ww` and height `hh` accordingly with the label size.
- unsigned int `output` () const
- Returns if a widget is used for output only.*

 - `FI_Group * parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
- Internal use only - "for hacks only".*

 - void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()
- Schedules the drawing of the widget.*

 - void `redraw_label` ()

Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)

- Changes the size or position of the widget.*
- [FI_Color selection_color](#) () const
 - Gets the selection color.*
- void [selection_color](#) ([FI_Color](#) a)
 - Sets the selection color.*
- void [set_active](#) ()
 - Marks the widget as active without sending events or changing focus.*
- void [set_changed](#) ()
 - Marks the value of the widget as changed.*
- void [set_output](#) ()
 - Sets a widget to output only.*
- void [set_visible](#) ()
 - Makes the widget visible.*
- void [set_visible_focus](#) ()
 - Enables keyboard focus navigation with this widget.*
- virtual void [show](#) ()
 - Makes a widget visible.*
- void [size](#) (int W, int H)
 - Changes the size of the widget.*
- int [take_focus](#) ()
 - Gives the widget the keyboard focus.*
- unsigned int [takeevents](#) () const
 - Returns if the widget is able to take events.*
- int [test_shortcut](#) ()
 - Returns true if the widget's label contains the entered '&x' shortcut.*
- const char * [tooltip](#) () const
 - Gets the current tooltip text.*
- void [tooltip](#) (const char *text)
 - Sets the current tooltip text.*
- [FI_Window](#) * [top_window](#) () const
 - Returns a pointer to the top-level window for the widget.*
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
 - Finds the x/y offset of the current widget relative to the top-level window.*
- [uchar](#) [type](#) () const
 - Gets the widget type.*
- void [type](#) ([uchar](#) t)
 - Sets the widget type.*
- int [use_accents_menu](#) ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * [user_data](#) () const
 - Gets the user data for this widget.*
- void [user_data](#) (void *v)
 - Sets the user data for this widget.*
- unsigned int [visible](#) () const
 - Returns whether a widget is visible.*
- unsigned int [visible_focus](#) ()
 - Checks whether this widget has a visible focus.*
- void [visible_focus](#) (int v)
 - Modifies keyboard focus navigation.*
- int [visible_r](#) () const
 - Returns whether a widget and all its parents are visible.*

- int **w** () const
Gets the widget width.
- **FI_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FI_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**FI_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** ()
Draws the widget.

Protected Member Functions inherited from **FI_Slider**

- void **draw** ()
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from **FI_Valuator**

- **FI_Valuator** (int X, int Y, int W, int H, const char *L)
*Creates a new **FI_Valuator** widget using the given position, size, and label string.*
- void **handle_drag** (double newvalue)
*Called during a drag operation, after an **FL_WHEN_CHANGED** event is received and before the callback.*
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
*Called after an **FL_WHEN_RELEASE** event is received and before the callback.*
- int **horizontal** () const
*Tells if the valuator is an **FL_HORIZONTAL** one.*
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
 - [INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
 - [FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 - ,
 - [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 - ,
 - [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 - ,
 - [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#) = 1<<19 ,
 - [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

9.119.1 Detailed Description

The [Fl_Scrollbar](#) widget displays a slider with arrow buttons at the ends of the scrollbar.

Clicking on the arrows move up/left and down/right by [linesize\(\)](#). Scrollbars also accept FL_SHORTCUT events: the arrows move by [linesize\(\)](#), and vertical scrollbars take Page Up/Down (they move by the page size minus [linesize\(\)](#)) and Home/End (they jump to the top or bottom).

Scrollbars have [step\(1\)](#) preset (they always return integers). If desired you can set the [step\(\)](#) to non-integer values. You will then have to use casts to get at the floating-point versions of [value\(\)](#) from [Fl_Slider](#).

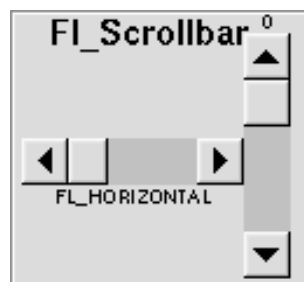

Figure 9.30 [Fl_Scrollbar](#)

9.119.2 Constructor & Destructor Documentation

9.119.2.1 [Fl_Scrollbar\(\)](#)

```
Fl_Scrollbar::Fl_Scrollbar (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [Fl_Scrollbar](#) widget with given position, size, and label. You need to do `type(FL_HORIZONTAL)` if you want a horizontal scrollbar.

9.119.3 Member Function Documentation

9.119.3.1 [draw\(\)](#)

```
void Fl_Scrollbar::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                       // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

9.119.3.2 handle()

```
int Fl_Scrollbar::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

9.119.3.3 linesize()

```
void Fl_Scrollbar::linesize (
    int i ) [inline]
```

This number controls how big the steps are that the arrow keys do.

In addition page up/down move by the size last sent to [value\(\)](#) minus one [linesize\(\)](#). The default is 16.

9.119.3.4 value() [1/3]

```
int Fl_Scrollbar::value ( ) const [inline]
```

Gets the integer value (position) of the slider in the scrollbar.

You can get the floating point value with [Fl_Slider::value\(\)](#).

See also

[Fl_Scrollbar::value\(int p\)](#)

[Fl_Scrollbar::value\(int pos, int size, int first, int total\)](#)

9.119.3.5 value() [2/3]

```
int Fl_Scrollbar::value (
    int p ) [inline]
```

Sets the value (position) of the slider in the scrollbar.

See also

[Fl_Scrollbar::value\(\)](#)

[Fl_Scrollbar::value\(int pos, int size, int first, int total\)](#)

9.119.3.6 value() [3/3]

```
int Fl_Scrollbar::value (
    int pos,
    int windowSize,
    int first,
    int total ) [inline]
```

Sets the position, size and range of the slider in the scrollbar.

Parameters

in	<i>pos</i>	position, first line displayed
in	<i>windowSize</i>	number of lines displayed
in	<i>first</i>	number of first line
in	<i>total</i>	total number of lines

You should call this every time your window changes size, your data changes size, or your scroll position changes (even if in response to a callback from this scrollbar). All necessary calls to [redraw\(\)](#) are done.

Calls [FI_Slider::scrollvalue\(int pos, int size, int first, int total\)](#).

The documentation for this class was generated from the following files:

- [Fl_Scrollbar.H](#)
- [Fl_Scrollbar.cxx](#)

9.120 FI_Scroll::FI_Scrollbar_Data Struct Reference

A local struct to manage a scrollbar's xywh region and tab values.

```
#include <Fl_Scroll.H>
```

Public Attributes

- int **first**
scrollbar tab's "number of first line"
- int **h**
- int **pos**
scrollbar tab's "position of first line displayed"
- int **size**
scrollbar tab's "size of window in lines"
- int **total**
scrollbar tab's "total number of lines"
- int **w**
- int **x**
- int **y**

9.120.1 Detailed Description

A local struct to manage a scrollbar's xywh region and tab values.

The documentation for this struct was generated from the following file:

- [Fl_Scroll.H](#)

9.121 FI_Secret_Input Class Reference

The [FI_Secret_Input](#) class is a subclass of [FI_Input](#) that displays its input as a string of placeholders.

```
#include <Fl_Secret_Input.H>
```

Inheritance diagram for [FI_Secret_Input](#):

Public Member Functions

- `FI_Secret_Input` (int X, int Y, int W, int H, const char *l=0)
Creates a new `FI_Secret_Input` widget using the given position, size, and label string.
- int `handle` (int)
Handles the specified event.

Public Member Functions inherited from `FI_Input`

- `FI_Input` (int, int, int, int, const char *l=0)
Creates a new `FI_Input` widget using the given position, size, and label string.

Public Member Functions inherited from `FI_Input_`

- int `copy` (int clipboard)
Put the current selection into the clipboard.
- int `copy_cuts` ()
Copies the yank buffer to the clipboard.
- `FI_Color` `cursor_color` () const
Gets the color of the cursor.
- void `cursor_color` (`FI_Color` n)
Sets the color of the cursor.
- int `cut` ()
Deletes the current selection.
- int `cut` (int a, int b)
Deletes all characters between index a and b.
- int `cut` (int n)
Deletes the next n bytes rounded to characters before or after the cursor.
- `FI_Input_` (int, int, int, int, const char *l=0)
Creates a new `FI_Input_` widget.
- `FI_Char` `index` (int i) const
Returns the character at index i.
- int `input_type` () const
Gets the input field type.
- void `input_type` (int t)
Sets the input field type.
- int `insert` (const char *t, int l=0)
Inserts text at the cursor position.
- int `mark` () const
Gets the current selection mark.
- int `mark` (int m)
Sets the current selection mark.

- int `maximum_size` () const
Gets the maximum length of the input field in characters.
- void `maximum_size` (int m)
Sets the maximum length of the input field in characters.
- int `position` () const
Gets the position of the text cursor.
- int `position` (int p)
Sets the cursor position and mark.
- int `position` (int p, int m)
Sets the index for the cursor and mark.
- int `readonly` () const
Gets the read-only state of the input field.
- void `readonly` (int b)
Sets the read-only state of the input field.
- int `replace` (int b, int e, const char *text, int ilen=0)
Deletes text from b to e and inserts the new string text.
- void `resize` (int, int, int, int)
Changes the size of the widget.
- int `shortcut` () const
Return the shortcut key associated with this widget.
- void `shortcut` (int s)
Sets the shortcut key associated with this widget.
- int `size` () const
Returns the number of bytes in `value()`.
- void `size` (int W, int H)
Sets the width and height of this widget.
- int `static_value` (const char *)
Changes the widget text.
- int `static_value` (const char *, int)
Changes the widget text.
- int `tab_nav` () const
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- void `tab_nav` (int val)
Sets whether the Tab key does focus navigation, or inserts tab characters into `FI_Multiline_Input`.
- `FI_Color` `textcolor` () const
Gets the color of the text in the input field.
- void `textcolor` (`FI_Color` n)
Sets the color of the text in the input field.
- `FI_Font` `textfont` () const
Gets the font of the text in the input field.
- void `textfont` (`FI_Font` s)
Sets the font of the text in the input field.
- `FI_Fontsize` `textsize` () const
Gets the size of the text in the input field.
- void `textsize` (`FI_Fontsize` s)
Sets the size of the text in the input field.
- int `undo` ()
Undoes previous changes to the text buffer.
- const char * `value` () const
Returns the text displayed in the widget.
- int `value` (const char *)

- Changes the widget text.*
- int [value](#) (const char *, int)
 - Changes the widget text.*
- int [wrap](#) () const
 - Gets the word wrapping state of the input field.*
- void [wrap](#) (int b)
 - Sets the word wrapping state of the input field.*
- [~FI_Input_](#) ()
 - Destroys the widget.*

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
 - Activates the widget.*
- unsigned int [active](#) () const
 - Returns whether the widget is active.*
- int [active_r](#) () const
 - Returns whether the widget and all of its parents are active.*
- [FI_Align](#) [align](#) () const
 - Gets the label alignment.*
- void [align](#) ([FI_Align](#) alignment)
- long [argument](#) () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void [argument](#) (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_GI_Window](#) * [as_gi_window](#) ()
 - Returns an [FI_GI_Window](#) pointer if this widget is an [FI_GI_Window](#).*
- virtual [FI_Group](#) * [as_group](#) ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Window](#) * [as_window](#) ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- [FI_Boxtype](#) [box](#) () const
 - Gets the box type of the widget.*
- void [box](#) ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) [callback](#) () const
 - Gets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int [changed](#) () const
 - Checks if the widget value changed since the last callback.*
- void [clear_active](#) ()

- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FL_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (`FL_Color` bg)
- Sets the background color of the widget.*

 - void `color` (`FL_Color` bg, `FL_Color` sel)
- Sets the background and selection color of the widget.*

 - `FL_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const `FL_Widget` *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (uchar c)
- Sets the damage bits for the widget.*

 - void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label.*

 - const `FL_Image` * `deimage` () const
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FL_Image` &img)
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FL_Image` *img)
- Sets the image to use as part of the widget label.*

 - void `do_callback` ()
- Calls the widget callback.*

 - void `do_callback` (`FL_Widget` *o, long arg)
- Calls the widget callback.*

 - void `do_callback` (`FL_Widget` *o, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `FL_Align`) const

- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label.
- const `FI_Image` * `image` () const
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()

- Schedules the drawing of the label.*

 - [Fl_Color selection_color](#) () const
 - Gets the selection color.*
 - void [selection_color](#) ([Fl_Color](#) a)
 - Sets the selection color.*
 - void [set_active](#) ()
 - Marks the widget as active without sending events or changing focus.*
 - void [set_changed](#) ()
 - Marks the value of the widget as changed.*
 - void [set_output](#) ()
 - Sets a widget to output only.*
 - void [set_visible](#) ()
 - Makes the widget visible.*
 - void [set_visible_focus](#) ()
 - Enables keyboard focus navigation with this widget.*
 - virtual void [show](#) ()
 - Makes a widget visible.*
 - void [size](#) (int W, int H)
 - Changes the size of the widget.*
 - int [take_focus](#) ()
 - Gives the widget the keyboard focus.*
 - unsigned int [takeevents](#) () const
 - Returns if the widget is able to take events.*
 - int [test_shortcut](#) ()
 - Returns true if the widget's label contains the entered '&x' shortcut.*
 - const char * [tooltip](#) () const
 - Gets the current tooltip text.*
 - void [tooltip](#) (const char *text)
 - Sets the current tooltip text.*
 - [Fl_Window](#) * [top_window](#) () const
 - Returns a pointer to the top-level window for the widget.*
 - [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
 - Finds the x/y offset of the current widget relative to the top-level window.*
 - [uchar](#) [type](#) () const
 - Gets the widget type.*
 - void [type](#) ([uchar](#) t)
 - Sets the widget type.*
 - int [use_accents_menu](#) ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
 - void * [user_data](#) () const
 - Gets the user data for this widget.*
 - void [user_data](#) (void *v)
 - Sets the user data for this widget.*
 - unsigned int [visible](#) () const
 - Returns whether a widget is visible.*
 - unsigned int [visible_focus](#) ()
 - Checks whether this widget has a visible focus.*
 - void [visible_focus](#) (int v)
 - Modifies keyboard focus navigation.*
 - int [visible_r](#) () const
 - Returns whether a widget and all its parents are visible.*

- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` `i`)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *`cb`, void *`d`)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *`t`)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *`t`, const bool `require_alt=false`)
Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from `FI_Input`

- void `draw` ()
Draws the widget.

Protected Member Functions inherited from `FI_Input_`

- void `drawtext` (int, int, int, int)
Draws the text in the passed bounding box.
- void `handle_mouse` (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int `handletext` (int e, int, int, int, int)
Handles all kinds of text field related events.

- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** ()
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by `up_down_pos`.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from **FI_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**FI_Boxtype** t, **FI_Color** c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (**FI_Boxtype** t, int x, int y, int w, int h, **FI_Color** c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (**FI_Boxtype** t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.121.1 Detailed Description

The [Fl_Secret_Input](#) class is a subclass of [Fl_Input](#) that displays its input as a string of placeholders. Depending on the platform this placeholder is either the asterisk ('*') or the Unicode bullet character (U+2022). This subclass is usually used to receive passwords and other "secret" information.

9.121.2 Constructor & Destructor Documentation

9.121.2.1 Fl_Secret_Input()

```
Fl_Secret_Input::Fl_Secret_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [Fl_Secret_Input](#) widget using the given position, size, and label string. The default boxtype is `FL_DOWN_BOX`. Inherited destructor destroys the widget and any value associated with it.

9.121.3 Member Function Documentation

9.121.3.1 handle()

```
int Fl_Secret_Input::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget. When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise. Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

[Fl_Event](#)

Reimplemented from [Fl_Input](#).

The documentation for this class was generated from the following files:

- [Fl_Secret_Input.H](#)
- [Fl_Input.cxx](#)

9.122 Fl_Select_Browser Class Reference

The class is a subclass of [Fl_Browser](#) which lets the user select a single item, or no items by clicking on the empty space.

```
#include <Fl_Select_Browser.H>
```

Inheritance diagram for [Fl_Select_Browser](#):

Public Member Functions

- [FI_Select_Browser](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new *FI_Select_Browser* widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Browser](#)

- void [add](#) (const char *newtext, void *d=0)
Adds a new line to the end of the browser.
- void [bottomline](#) (int line)
Scrolls the browser so the bottom item in the browser is showing the specified *line*.
- void [clear](#) ()
Removes all the lines in the browser.
- char [column_char](#) () const
Gets the current column separator character.
- void [column_char](#) (char c)
Sets the column separator to *c*.
- const int * [column_widths](#) () const
Gets the current column width array.
- void [column_widths](#) (const int *arr)
Sets the current array to *arr*.
- void * [data](#) (int line) const
Returns the user *data()* for specified *line*.
- void [data](#) (int line, void *d)
Sets the user data for specified *line* to *d*.
- void [display](#) (int line, int val=1)
For back compatibility.
- int [displayed](#) (int line) const
Returns non-zero if *line* has been scrolled to a position where it is being displayed.
- [FI_Browser](#) (int X, int Y, int W, int H, const char *L=0)
The constructor makes an empty browser.
- char [format_char](#) () const
Gets the current format code prefix character, which by default is '@'.
- void [format_char](#) (char c)
Sets the current format code prefix character to *c*.
- void [hide](#) ()
Hides the entire *FI_Browser* widget – opposite of *show()*.
- void [hide](#) (int line)
Makes *line* invisible, preventing selection by the user.

- `Fl_Image * icon` (int line) const
Returns the icon currently defined for line.
- void `icon` (int line, `Fl_Image *icon`)
Set the image icon for line to the value icon.
- void `insert` (int line, const char *newtext, void *d=0)
Insert a new entry whose label is newtext above given line, optional data d.
- void `lineposition` (int line, `Fl_Line_Position` pos)
Updates the browser so that line is shown at position pos.
- int `load` (const char *filename)
Clears the browser and reads the file, adding each line from the file to the browser.
- void `make_visible` (int line)
Make the item at the specified line visible().
- void `middleline` (int line)
Scrolls the browser so the middle item in the browser is showing the specified line.
- void `move` (int to, int from)
Line from is removed and reinserted at to.
- void `remove` (int line)
Remove entry for given line number, making the browser one line shorter.
- void `remove_icon` (int line)
Removes the icon for line.
- void `replace` (int a, const char *b)
For back compatibility only.
- int `select` (int line, int val=1)
Sets the selection state of the item at line to the value val.
- int `selected` (int line) const
Returns 1 if specified line is selected, 0 if not.
- void `show` ()
Shows the entire Fl_Browser widget – opposite of hide().
- void `show` (int line)
Makes line visible, and available for selection by user.
- int `size` () const
Returns how many lines are in the browser.
- void `size` (int W, int H)
- void `swap` (int a, int b)
Swaps two browser lines a and b.
- const char * `text` (int line) const
Returns the label text for the specified line.
- void `text` (int line, const char *newtext)
Sets the text for the specified line to newtext.
- `Fl_Fontsize` `textsize` () const
Gets the default text size (in pixels) for the lines in the browser.
- void `textsize` (`Fl_Fontsize` newSize)
Sets the default text size (in pixels) for the lines in the browser to newSize.
- int `topline` () const
Returns the line that is currently visible at the top of the browser.
- void `topline` (int line)
Scrolls the browser so the top item in the browser is showing the specified line.
- int `value` () const
Returns the line number of the currently selected line, or 0 if none selected.
- void `value` (int line)
Sets the browser's value(), which selects the specified line.

- int `visible` (int line) const
Returns non-zero if the specified `line` is visible, 0 if hidden.
- `~FI_Browser` ()
The destructor deletes all list items and destroys the browser.

Public Member Functions inherited from `FI_Browser_`

- int `deselect` (int docallbacks=0)
Deselects all items in the list and returns 1 if the state changed or 0 if it did not.
- void `display` (void *item)
Displays the `item`, scrolling the list as necessary.
- int `handle` (int event)
Handles the `event` within the normal widget bounding box.
- `uchar has_scrollbar` () const
Returns the current scrollbar mode, see `FI_Browser_::has_scrollbar(uchar)`
- void `has_scrollbar` (uchar mode)
Sets whether the widget should have scrollbars or not (default `FI_Browser_::BOTH`).
- int `hposition` () const
Gets the horizontal scroll position of the list as a pixel position `pos`.
- void `hposition` (int)
Sets the horizontal scroll position of the list to pixel position `pos`.
- int `position` () const
Gets the vertical scroll position of the list as a pixel position `pos`.
- void `position` (int pos)
Sets the vertical scroll position of the list to pixel position `pos`.
- void `resize` (int X, int Y, int W, int H)
Repositions and/or resizes the browser.
- void `scrollbar_left` ()
Moves the vertical scrollbar to the lefthand side of the list.
- void `scrollbar_right` ()
Moves the vertical scrollbar to the righthand side of the list.
- int `scrollbar_size` () const
Gets the current size of the scrollbars' troughs, in pixels.
- void `scrollbar_size` (int newSize)
Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.
- int `scrollbar_width` () const
This method has been deprecated, existing for backwards compatibility only.
- void `scrollbar_width` (int width)
This method has been deprecated, existing for backwards compatibility only.
- int `select` (void *item, int val=1, int docallbacks=0)
Sets the selection state of `item` to `val`, and returns 1 if the state changed or 0 if it did not.
- int `select_only` (void *item, int docallbacks=0)
Selects `item` and returns 1 if the state changed or 0 if it did not.
- void `sort` (int flags=0)
Sort the items in the browser based on `flags`.
- `FI_Color textcolor` () const
Gets the default text color for the lines in the browser.
- void `textcolor` (`FI_Color` col)
Sets the default text color for the lines in the browser to color `col`.
- `FI_Font textfont` () const
Gets the default text font for the lines in the browser.

- void **textfont** (FI_Font font)
Sets the default text font for the lines in the browser to font.
- FI_Fontsize **textsize** () const
Gets the default text size (in pixels) for the lines in the browser.
- void **textsize** (FI_Fontsize newSize)
Sets the default text size (in pixels) for the lines in the browser to size.

Public Member Functions inherited from FI_Group

- FI_Widget *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** (FI_Widget &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (FI_Widget *o)
See void FI_Group::add(FI_Widget &w)
- void **add_resizable** (FI_Widget &o)
Adds a widget to the group and makes it the resizable widget.
- FI_Widget *const * **array** () const
Returns a pointer to the array of children.
- virtual FI_Group * **as_group** ()
Returns an FI_Group pointer if this widget is an FI_Group.
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- FI_Widget * **child** (int n) const
Returns array()[n].
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void **end** ()
Exactly the same as current(this->parent()).
- int **find** (const FI_Widget &o) const
*See int FI_Group::find(const FI_Widget *w) const.*
- int **find** (const FI_Widget *) const
Searches the child array for the widget and returns the index.
- FI_Group (int, int, int, int, const char *s=0)
Creates a new FI_Group widget using the given position, size, and label string.
- void **focus** (FI_Widget *W)
- void **forms_end** ()
This is for forms compatibility only.
- int **handle** (int)
Handles the specified event.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** (FI_Widget &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (FI_Widget &o, FI_Widget *before)

- This does insert(w, find(before)).*
- void **remove** (FI_Widget &)
 - Removes a widget from the group but does not delete it.*
- void **remove** (FI_Widget *o)
 - Removes the widget o from the group.*
- void **remove** (int index)
 - Removes the widget at index from the group but does not delete it.*
- FI_Widget * **resizable** () const
 - See void FI_Group::resizable(FI_Widget *box)*
- void **resizable** (FI_Widget &o)
 - See void FI_Group::resizable(FI_Widget *box)*
- void **resizable** (FI_Widget *o)
 - The resizable widget defines the resizing box for the group.*
- void **resize** (int, int, int, int)
 - Resizes the FI_Group widget and all of its children.*
- virtual ~FI_Group ()
 - The destructor also deletes all the children.*

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- FI_Align **align** () const
 - Gets the label alignment.*
- void **align** (FI_Align alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class FI_Gl_Window * **as_gl_window** ()
 - Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.*
- virtual FI_Window * **as_window** ()
 - Returns an FI_Window pointer if this widget is an FI_Window.*
- FI_Boxtype **box** () const
 - Gets the box type of the widget.*
- void **box** (FI_Boxtype new_box)
 - Sets the box type for the widget.*
- FI_Callback_p **callback** () const
 - Gets the current callback function for the widget.*
- void **callback** (FI_Callback *cb)
 - Sets the current callback function for the widget.*
- void **callback** (FI_Callback *cb, void *p)
 - Sets the current callback function for the widget.*
- void **callback** (FI_Callback0 *cb)

- Sets the current callback function for the widget.*

 - void `callback` (`FI_Callback1 *cb`, long `p=0`)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color color` () const

Gets the background color of the widget.
- void `color` (`FI_Color bg`)

Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)

Sets the background and selection color of the widget.
- `FI_Color color2` () const

For back compatibility only.
- void `color2` (unsigned `a`)

For back compatibility only.
- int `contains` (const `FI_Widget *w`) const

Checks if `w` is a child of this widget.
- void `copy_label` (const char *`new_label`)

Sets the current label.
- void `copy_tooltip` (const char *`text`)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)

Sets the damage bits for the widget.
- void `damage` (`uchar c`, int `x`, int `y`, int `w`, int `h`)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FI_Image * deimage` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)

Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- void `do_callback` ()

- Calls the widget callback.*

 - void `do_callback` (`FI_Widget *o`, long arg)
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget *o`, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `FI_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- `FI_Image * image` ()

Gets the image that is used as part of the widget label.
- const `FI_Image * image` () const
- void `image` (`FI_Image &img`)

Sets the image to use as part of the widget label.
- void `image` (`FI_Image *img`)

Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const

Checks if this widget is a child of `wgt`.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.
- void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)

Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const

Gets the label color.
- void `labelcolor` (`FI_Color c`)

Sets the label color.
- `FI_Font labelfont` () const

Gets the font to use.
- void `labelfont` (`FI_Font f`)

Sets the font to use.
- `FI_Fontsize labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize pix`)

Sets the font size in pixels.
- `FI_Labeltype labeltype` () const

Gets the label type.
- void `labeltype` (`FI_Labeltype a`)

Sets the label type.
- void `measure_label` (int &ww, int &hh) const

Sets width `ww` and height `hh` accordingly with the label size.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group * parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

- Repositions the window or widget.*

 - void `redraw` ()
Schedules the drawing of the widget.
 - void `redraw_label` ()
Schedules the drawing of the label.
 - `FI_Color selection_color` () const
Gets the selection color.
 - void `selection_color` (`FI_Color` a)
Sets the selection color.
 - void `set_active` ()
Marks the widget as active without sending events or changing focus.
 - void `set_changed` ()
Marks the value of the widget as changed.
 - void `set_output` ()
Sets a widget to output only.
 - void `set_visible` ()
Makes the widget visible.
 - void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
 - void `size` (int W, int H)
Changes the size of the widget.
 - int `take_focus` ()
Gives the widget the keyboard focus.
 - unsigned int `takeevents` () const
Returns if the widget is able to take events.
 - int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
 - const char * `tooltip` () const
Gets the current tooltip text.
 - void `tooltip` (const char *text)
Sets the current tooltip text.
 - `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
 - `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
 - `uchar type` () const
Gets the widget type.
 - void `type` (`uchar` t)
Sets the widget type.
 - int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
 - void * `user_data` () const
Gets the user data for this widget.
 - void `user_data` (void *v)
Sets the user data for this widget.
 - unsigned int `visible` () const
Returns whether a widget is visible.
 - unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
 - void `visible_focus` (int v)
Modifies keyboard focus navigation.

- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [FI_Window * window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Public Types inherited from [FI_Browser](#)

- enum [FI_Line_Position](#) { [TOP](#) , [BOTTOM](#) , [MIDDLE](#) }
For internal use only?

Public Types inherited from [FI_Browser_](#)

- enum {
[HORIZONTAL](#) = 1 , [VERTICAL](#) = 2 , [BOTH](#) = 3 , [ALWAYS_ON](#) = 4 ,
[HORIZONTAL_ALWAYS](#) = 5 , [VERTICAL_ALWAYS](#) = 6 , [BOTH_ALWAYS](#) = 7 }
Values for [has_scrollbar\(\)](#).

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group * current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group *g](#))
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget *cb](#), void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Public Attributes inherited from [FI_Browser_](#)

- [FI_Scrollbar hscrollbar](#)
Horizontal scrollbar.
- [FI_Scrollbar scrollbar](#)
Vertical scrollbar.

Protected Types inherited from FI_Widget

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
 ,
OVERRIDE = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
 ,
MENU_WINDOW = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15
 ,
GROUP_RELATIVE = 1<<16 , **COPIED_TOOLTIP** = 1<<17 , **FULLSCREEN** = 1<<18 , **MAC_USE_ACCENTS_MENU**
 = 1<<19 ,
USERFLAG3 = 1<<29 , **USERFLAG2** = 1<<30 , **USERFLAG1** = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Browser

- FL_BLINE * **_remove** (int line)
Removes the item at the specified line.
- FL_BLINE * **find_line** (int line) const
Returns the item for specified line.
- int **full_height** () const
The height of the entire list of all [visible\(\)](#) items in pixels.
- int **incr_height** () const
The default 'average' item height (including inter-item spacing) in pixels.
- void **insert** (int line, FL_BLINE *item)
Insert specified item above line.
- void * **item_at** (int line) const
Return the item at specified line.
- void **item_draw** (void *item, int X, int Y, int W, int H) const
Draws item at the position specified by X Y W H.
- void * **item_first** () const
Returns the very first item in the list.
- int **item_height** (void *item) const
Returns height of item in pixels.
- void * **item_last** () const
Returns the very last item in the list.
- void * **item_next** (void *item) const
Returns the next item after item.
- void * **item_prev** (void *item) const
Returns the previous item before item.
- void **item_select** (void *item, int val)
Change the selection state of item to the value val.
- int **item_selected** (void *item) const
See if item is selected.
- void **item_swap** (void *a, void *b)
Swap the items a and b.
- const char * **item_text** (void *item) const
Returns the label text for item.
- int **item_width** (void *item) const
Returns width of item in pixels.
- int **lineno** (void *item) const
Returns line number corresponding to item, or zero if not found.
- void **swap** (FL_BLINE *a, FL_BLINE *b)
Swap the two items a and b.

Protected Member Functions inherited from [FI_Browser_](#)

- void [bbox](#) (int &X, int &Y, int &W, int &H) const
Returns the bounding box for the interior of the list's display window, inside the scrollbars.
- void [deleting](#) (void *item)
*This method should be used when *item* is being deleted from the list.*
- int [displayed](#) (void *item) const
*Returns non-zero if *item* has been scrolled to a position where it is being displayed.*
- void [draw](#) ()
Draws the list within the normal widget bounding box.
- void * [find_item](#) (int ypos)
*This method returns the item under mouse y position *ypos*.*
- [FI_Browser_](#) (int X, int Y, int W, int H, const char *L=0)
The constructor makes an empty browser.
- virtual int [full_width](#) () const
This method may be provided by the subclass to indicate the full width of the item list, in pixels.
- void [inserting](#) (void *a, void *b)
This method should be used when an item is in the process of being inserted into the list.
- virtual int [item_quick_height](#) (void *item) const
*This method may be provided by the subclass to return the height of the *item*, in pixels.*
- int [leftedge](#) () const
This method returns the X position of the left edge of the list area after adjusting for the scrollbar and border, if any.
- void [new_list](#) ()
This method should be called when the list data is completely replaced or cleared.
- void [redraw_line](#) (void *item)
*This method should be called when the contents of *item* has changed, but not its height.*
- void [redraw_lines](#) ()
This method will cause the entire list to be redrawn.
- void [replacing](#) (void *a, void *b)
*This method should be used when item *a* is being replaced by item *b*.*
- void * [selection](#) () const
Returns the item currently selected, or NULL if there is no selection.
- void [swapping](#) (void *a, void *b)
*This method should be used when two items *a* and *b* are being swapped.*
- void * [top](#) () const
Returns the item that appears at the top of the list.

Protected Member Functions inherited from [FI_Group](#)

- void [draw](#) ()
Draws the widget.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [Fl_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([Fl_Boxtype](#) t, [Fl_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([Fl_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.122.1 Detailed Description

The class is a subclass of [Fl_Browser](#) which lets the user select a single item, or no items by clicking on the empty space.

As long as the mouse button is held down on an unselected item it is highlighted. Normally the callback is done when the user presses the mouse, but you can change this with [when\(\)](#).

See [Fl_Browser](#) for methods to add and remove lines from the browser.

9.122.2 Constructor & Destructor Documentation

9.122.2.1 [Fl_Select_Browser\(\)](#)

```
Fl_Select_Browser::Fl_Select_Browser (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [Fl_Select_Browser](#) widget using the given position, size, and label string.

The default boxtype is FL_DOWN_BOX. The constructor specializes [Fl_Browser\(\)](#) by setting the type to FL_↔ SELECT_BROWSER. The destructor destroys the widget and frees all memory that has been allocated. The documentation for this class was generated from the following files:

- [Fl_Select_Browser.H](#)
- [Fl_Browser.cxx](#)

9.123 Fl_Shared_Image Class Reference

This class supports caching, loading, scaling, and drawing of image files.

```
#include <Fl_Shared_Image.H>
```

Inheritance diagram for Fl_Shared_Image:

Public Member Functions

- virtual void [color_average](#) ([Fl_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [Fl_Image](#) * [copy](#) ()
- virtual [Fl_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx, int cy)
Draws the image with a bounding box.
- const char * [name](#) ()
Returns the filename of the shared image.
- int [original](#) ()
Returns whether this is an original image.
- int [refcount](#) ()
Returns the number of references of this shared image.
- void [release](#) ()
Releases and possibly destroys (if refcount <= 0) a shared image.
- void [reload](#) ()
Reloads the shared image from disk.
- void [scale](#) (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the shared image.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.

Public Member Functions inherited from [Fl_Image](#)

- [Fl_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const

- Returns the current image depth.*

 - const char *const * **data** () const

Returns a pointer to the current image data array.
- void **draw** (int X, int Y)

Draws the image.
- int **fail** ()

Returns a value that is not 0 if there is currently no image available.
- **FI_Image** (int W, int H, int D)

The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const

Returns the current image height in pixels.
- void **inactive** ()

*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- virtual void **label** (**FI_Menu_Item** *m)

*The **label()** methods are an obsolete way to set the image attribute of a widget or menu item.*
- virtual void **label** (**FI_Widget** *w)

*The **label()** methods are an obsolete way to set the image attribute of a widget or menu item.*
- int **ld** () const

Returns the current line data size in bytes.
- int **w** () const

Returns the current image width in pixels.
- virtual ~**FI_Image** ()

The destructor is a virtual method that frees all memory used by the image.

Static Public Member Functions

- static void **add_handler** (**FI_Shared_Handler** f)

Adds a shared image handler, which is basically a test function for adding new formats.
- static **FI_Shared_Image** * **find** (const char *name, int W=0, int H=0)

Finds a shared image from its name and size specifications.
- static **FI_Shared_Image** * **get** (const char *name, int W=0, int H=0)

Find or load an image that can be shared by multiple widgets.
- static **FI_Shared_Image** * **get** (**FI_RGB_Image** *rgb, int own_it=1)

*Builds a shared image from a pre-existing **FI_RGB_Image**.*
- static **FI_Shared_Image** ** **images** ()

*Returns the **FI_Shared_Image*** array.*
- static int **num_images** ()

Returns the total number of shared images in the array.
- static void **remove_handler** (**FI_Shared_Handler** f)

Removes a shared image handler.
- static void **scaling_algorithm** (**FI_RGB_Scaling** algorithm)

Sets what algorithm is used when resizing a source image.

Static Public Member Functions inherited from **FI_Image**

- static **FI_RGB_Scaling** **RGB_scaling** ()

Returns the currently used RGB image scaling method.
- static void **RGB_scaling** (**FI_RGB_Scaling**)

*Sets the RGB image scaling method used for **copy(int, int)**.*

Protected Member Functions

- void `add` ()
Adds a shared image to the image cache.
- `FI_Shared_Image` ()
Creates an empty shared image.
- `FI_Shared_Image` (const char *n, `FI_Image` *img=0)
Creates a shared image from its filename and its corresponding `FI_Image` img.*
- void `update` ()
- virtual `~FI_Shared_Image` ()
The destructor frees all memory and server resources that are used by the image.

Protected Member Functions inherited from `FI_Image`

- void `d` (int D)
Sets the current image depth.
- void `data` (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void `draw_empty` (int X, int Y)
The protected method `draw_empty()` draws a box with an X in it.
- void `h` (int H)
Sets the current image height in pixels.
- void `ld` (int LD)
Sets the current line data size in bytes.
- void `w` (int W)
Sets the current image width in pixels.

Static Protected Member Functions

- static int `compare` (`FI_Shared_Image` **i0, `FI_Shared_Image` **i1)
Compares two shared images.

Static Protected Member Functions inherited from `FI_Image`

- static void `labeltype` (const `FI_Label` *lo, int lx, int ly, int lw, int lh, `FI_Align` la)
- static void `measure` (const `FI_Label` *lo, int &lw, int &lh)

Protected Attributes

- int `alloc_image_`
- `FI_Image` * `image_`
- const char * `name_`
- int `original_`
- int `refcount_`

Static Protected Attributes

- static int `alloc_handlers_` = 0
- static int `alloc_images_` = 0
- static `FI_Shared_Handler` * `handlers_` = 0
- static `FI_Shared_Image` ** `images_` = 0
- static int `num_handlers_` = 0
- static int `num_images_` = 0

- static const int **ERR_NO_IMAGE** = -1

9.123.1 Detailed Description

This class supports caching, loading, scaling, and drawing of image files.

Most applications will also want to link against the `fltk_images` library and call the `fl_register_images()` function to support standard image formats such as BMP, GIF, JPEG, and PNG.

Images can be requested (loaded) with `FI_Shared_Image::get()`, `find()`, and some other methods. All images are cached in an internal list of shared images and should be released when they are no longer needed. A `refcount` is used to determine if a released image is to be destroyed with `delete`.

[FI_Shared_Image::release\(\)](#)

9.123.2 Constructor & Destructor Documentation**9.123.2.1 FI_Shared_Image() [1/2]**

```
FI_Shared_Image::FI_Shared_Image ( ) [protected]
```

Creates an empty shared image.

The constructors create a new shared image record in the image cache.

The constructors are protected and cannot be used directly from a program. Use the `get()` method instead.

9.123.2.2 FI_Shared_Image() [2/2]

```
FI_Shared_Image::FI_Shared_Image (
    const char * n,
    FI_Image * img = 0 ) [protected]
```

Creates a shared image from its filename and its corresponding `FI_Image* img`.

The constructors create a new shared image record in the image cache.

The constructors are protected and cannot be used directly from a program. Use the `get()` method instead.

9.123.2.3 ~FI_Shared_Image()

```
FI_Shared_Image::~FI_Shared_Image ( ) [protected], [virtual]
```

The destructor frees all memory and server resources that are used by the image.

The destructor is protected and cannot be used directly from a program. Use the `FI_Shared_Image::release()` method instead.

9.123.3 Member Function Documentation**9.123.3.1 add()**

```
void FI_Shared_Image::add ( ) [protected]
```

Adds a shared image to the image cache.

This **protected** method adds an image to the cache, an ordered list of shared images. The cache is searched for a matching image whenever one is requested, for instance with [Fl_Shared_Image::get\(\)](#) or [Fl_Shared_Image::find\(\)](#).

9.123.3.2 color_average()

```
void Fl_Shared_Image::color_average (
    Fl_Color c,
    float i ) [virtual]
```

The [color_average\(\)](#) method averages the colors in the image with the FLTK color value *c*.

The *i* argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from [Fl_Image](#).

9.123.3.3 compare()

```
int Fl_Shared_Image::compare (
    Fl_Shared_Image ** i0,
    Fl_Shared_Image ** i1 ) [static], [protected]
```

Compares two shared images.

The order of comparison is:

1. Image name, usually the filename used to load it
2. Image width
3. Image height

Binary search in a sorted array works only if we search for the same parameters that were also used for sorting. No special cases are possible here.

[Fl_Shared_Image::find\(\)](#) requires a search for an element with a matching name and the `original_` flags set. This is not implemented via binary search, but by a simple run of the array inside [Fl_Shared_Image::find\(\)](#).

Returns

Whether the images match or their relative sort order (see text).

Return values

<i>0</i>	the images match
<i><0</i>	Image <i>i0</i> is <i>less</i> than image <i>i1</i>
<i>>0</i>	Image <i>i0</i> is <i>greater</i> than image <i>i1</i>

9.123.3.4 copy()

```
Fl_Image * Fl_Shared_Image::copy (
    int W,
    int H ) [virtual]
```

The [copy\(\)](#) method creates a copy of the specified image.

If the width and height are provided, the image is resized to the specified size. The image should be deleted (or in the case of [Fl_Shared_Image](#), released) when you are done with it.

Reimplemented from [Fl_Image](#).

9.123.3.5 desaturate()

```
void Fl_Shared_Image::desaturate ( ) [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.
 An internal copy is made of the original image before changes are applied, to avoid modifying the original image.
 Reimplemented from [Fl_Image](#).

9.123.3.6 draw()

```
void Fl_Shared_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx,
    int cy ) [virtual]
```

Draws the image with a bounding box.

Arguments X, Y, W, H specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the cx and cy arguments.

In other words: `fl_push_clip(X, Y, W, H)` is applied, the image is drawn with its upper-left corner at X-cx, Y-cy and its own width and height, `fl_pop_clip()` is applied.

Reimplemented from [Fl_Image](#).

9.123.3.7 find()

```
Fl_Shared_Image * Fl_Shared_Image::find (
    const char * name,
    int W = 0,
    int H = 0 ) [static]
```

Finds a shared image from its name and size specifications.

This uses a binary search in the image cache.

If the image name exists with the exact width W and height H, then it is returned.

If W == 0 and the image name exists with another size, then the **original** image with that name is returned.

In either case the refcount of the returned image is increased. The found image should be released with [Fl_Shared_Image::release\(\)](#) when no longer needed.

An image is marked `original` if it was directly loaded from a file or from memory as opposed to copied and resized images.

This comparison is used in [Fl_Shared_Image::find\(\)](#) to find an image that matches the requested one or to find the position where a new image should be entered into the sorted list of shared images.

It is used in two steps by [Fl_Shared_Image::add\(\)](#):

1. search with exact width and height
2. if not found, search again with width = 0 (and height = 0)

The first step will only return a match if the image exists with the same width and height. The second step will match if there is an image marked `original` with the same name, regardless of width and height.

9.123.3.8 get() [1/2]

```
Fl_Shared_Image * Fl_Shared_Image::get (
    const char * name,
    int W = 0,
    int H = 0 ) [static]
```

Find or load an image that can be shared by multiple widgets.

If the image exists with the requested size, this image will be returned.

If the image exists, but only with another size, then a new copy with the requested size (width W and height H) will be created as a resized copy of the original image. The new image is added to the internal list of shared images.

If the image does not yet exist, then a new image of the proper dimension is created from the filename name. The original image from filename name is always added to the list of shared images in its original size. If the requested size differs, then the resized copy with width W and height H is also added to the list of shared images.

Note

If the sizes differ, then *two* images are created as mentioned above. This is intentional so the original image is cached and preserved. If you request the same image with another size later, then the **original** image will be found, copied, resized, and returned.

Shared JPEG and PNG images can also be created from memory by using their named memory access constructor. You should [release\(\)](#) the image when you're done with it.

Parameters

<i>name</i>	name of the image
<i>W,H</i>	desired size

See also

[FI_Shared_Image::find\(const char *name, int W, int H\)](#)

[FI_Shared_Image::release\(\)](#)

[FI_JPEG_Image::FI_JPEG_Image\(const char *name, const unsigned char *data\)](#)

[FI_PNG_Image::FI_PNG_Image](#) (const char *name_png, const unsigned char *buffer, int maxsize)

9.123.3.9 get() [2/2]

```
FI_Shared_Image * FI_Shared_Image::get (
    FI_RGB_Image * rgb,
    int own_it = 1 ) [static]
```

Builds a shared image from a pre-existing [FI_RGB_Image](#).

Parameters

in	<i>rgb</i>	an FI_RGB_Image used to build a new shared image.
in	<i>own↔ _it</i>	1 if the shared image should delete <i>rgb</i> when it is itself deleted, 0 otherwise

Version

1.3.4

9.123.3.10 original()

```
int FI_Shared_Image::original ( ) [inline]
```

Returns whether this is an original image.

Images loaded from a file or from memory are marked `original` as opposed to images created as a copy of another image with different size (width or height).

Note

This is useful for debugging (rarely used in user code).

Since

FLTK 1.4.0

9.123.3.11 refcount()

```
int FI_Shared_Image::refcount ( ) [inline]
```

Returns the number of references of this shared image.

When reference is below 1, the image is deleted.

9.123.3.12 release()

```
void Fl_Shared_Image::release ( )
```

Releases and possibly destroys (if refcount ≤ 0) a shared image.

In the latter case, it will reorganize the shared image array so that no hole will occur.

9.123.3.13 scale()

```
void Fl_Shared_Image::scale (
    int width,
    int height,
    int proportional = 1,
    int can_expand = 0 )
```

Sets the drawing size of the shared image.

This function gives the shared image its own size, independently from the size of the original image that is typically larger. This can be useful to draw a shared image on a drawing surface whose resolution is higher than the drawing unit for this surface: all pixels of the original image become available to fill an area of the drawing surface sized at *width*, *height*. Examples of such drawing surfaces: laser printers, PostScript files, PDF printers, retina displays on Apple hardware.

Parameters

<i>width,height</i>	maximum width and height (in drawing units) to use when drawing the shared image
<i>proportional</i>	if not null, keep the width and height of the shared image proportional to those of its original image
<i>can_expand</i>	if null, the width and height of the shared image will not exceed those of the original image

Version

1.3.4 and requires compiling with `FLTK_ABI_VERSION = 10304`

Example code: scale an image to fit in a box

```
Fl_Box *b = ... // a box
Fl_Shared_Image *shared = Fl_Shared_Image::get("/path/to/picture.jpeg"); // read a picture file
shared->scale(b->w(), b->h(), 1); // set the drawing size of the shared image to the size of the box
b->image(shared); // use the shared image as the box image
b->align(FL_ALIGN_INSIDE | FL_ALIGN_CENTER | FL_ALIGN_CLIP); // the image is to be drawn centered in the box
```

9.123.3.14 scaling_algorithm()

```
static void Fl_Shared_Image::scaling_algorithm (
    Fl_RGB_Scaling algorithm ) [inline], [static]
```

Sets what algorithm is used when resizing a source image.

The default algorithm is `FL_RGB_SCALING_BILINEAR`. Drawing an [Fl_Shared_Image](#) is sometimes performed by first resizing the source image and then drawing the resized copy. This occurs, e.g., when drawing to screen under Linux or MSWindows after having called [Fl_Shared_Image::scale\(\)](#). This function controls what method is used when the image to be resized is an [Fl_RGB_Image](#).

Version

1.3.4 and requires compiling with `FLTK_ABI_VERSION = 10304`

9.123.3.15 uncache()

```
void Fl_Shared_Image::uncache ( ) [virtual]
```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented from [Fl_Image](#).

The documentation for this class was generated from the following files:

- [Fl_Shared_Image.H](#)
- [Fl_Shared_Image.cxx](#)

9.124 FI_Simple_Counter Class Reference

This widget creates a counter with only 2 arrow buttons.

```
#include <FI_Simple_Counter.H>
```

Inheritance diagram for FI_Simple_Counter:

Public Member Functions

- **FI_Simple_Counter** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from FI_Counter

- **FI_Counter** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Counter widget using the given position, size, and label string.
- int **handle** (int)
Handles the specified event.
- void **lstep** (double a)
Sets the increment for the large step buttons.
- double **step** () const
Returns the increment for normal step buttons.
- void **step** (double a)
Sets the increment for the normal step buttons.
- void **step** (double a, double b)
Sets the increments for the normal and large step buttons.
- **FI_Color textcolor** () const
Gets the font color.
- void **textcolor** (FI_Color s)
Sets the font color to s.
- **FI_Font textfont** () const
Gets the text font.
- void **textfont** (FI_Font s)
Sets the text font to s.
- **FI_Fontsize textsize** () const
Gets the font size.
- void **textsize** (FI_Fontsize s)
Sets the font size to s.
- **~FI_Counter** ()
Destroys the valuator.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double FI_Valuator::step() const

- void **step** (double s)
See double FI_Valuator::step() const.
- void **step** (int a)
See double FI_Valuator::step() const

- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (FI_Align alignment)

- Sets the label alignment.*

 - long `argument` () const

Gets the current user data (long) argument that is passed to the callback function.
 - void `argument` (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_Gl_Window` * `as_gl_window` ()

Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
- virtual `FI_Group` * `as_group` ()

Returns an `FI_Group` pointer if this widget is an `FI_Group`.
- virtual `FI_Window` * `as_window` ()

Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, void *p)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback0` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FI_Color` bg)

Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)

Sets the background and selection color of the widget.
- `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget` *w) const

Checks if w is a child of this widget.

- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * deimage` () const
- void `deimage` (FL_Image &img)
Sets the image to use as part of the widget label.
- void `deimage` (FL_Image *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (FL_Widget *o, long arg)
Calls the widget callback.
- void `do_callback` (FL_Widget *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, FL_Align) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (FL_Image &img)
Sets the image to use as part of the widget label.
- void `image` (FL_Image *img)
Sets the image to use as part of the widget label.
- int `inside` (const FL_Widget *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (FL_Labeltype a, const char *b)
Shortcut to set the label text and type in one call.
- `FL_Color labelcolor` () const

- Gets the label color.*
- void [labelcolor](#) ([FI_Color](#) c)
Sets the label color.
- [FI_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
Sets the font to use.
- [FI_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FI_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.

- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- uchar [type](#) () const
Gets the widget type.
- void [type](#) (uchar t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) ()
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [FI_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Counter](#)

- void [draw](#) ()
Draws the widget.

Protected Member Functions inherited from [FI_Valuator](#)

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FI_Valuator](#) widget using the given position, size, and label string.
- void [handle_drag](#) (double newvalue)
Called during a drag operation, after an [FL_WHEN_CHANGED](#) event is received and before the callback.
- void [handle_push](#) ()
Stores the current value in the previous value.
- void [handle_release](#) ()
Called after an [FL_WHEN_RELEASE](#) event is received and before the callback.
- int [horizontal](#) () const
Tells if the valuator is an [FL_HORIZONTAL](#) one.
- double [previous_value](#) () const
Gets the previous floating point value before an event changed it.
- void [set_value](#) (double v)
Sets the current floating point value.
- double [softclamp](#) (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.124.1 Detailed Description

This widget creates a counter with only 2 arrow buttons.

P

Figure 9.31 FI_Simple_Counter

The documentation for this class was generated from the following files:

- FI_Simple_Counter.H
- FI_Counter.cxx

9.125 FI_Single_Window Class Reference

This is the same as [FI_Window](#).

```
#include <FI_Single_Window.H>
```

Inheritance diagram for `FI_Single_Window`:

Public Member Functions

- **FI_Single_Window** (int W, int H, const char *l=0)
Creates a new *FI_Single_Window* widget using the given size, and label (title) string.
- **FI_Single_Window** (int X, int Y, int W, int H, const char *l=0)
Creates a new *FI_Single_Window* widget using the given position, size, and label (title) string.
- void **flush** ()
Forces the window to be drawn, this window is also made current and calls *draw()*.
- int **make_current** ()
- void **show** ()
Puts the window on the screen.
- void **show** (int a, char **b)

Public Member Functions inherited from [FI_Window](#)

- virtual [FI_Window](#) * **as_window** ()
Returns an *FI_Window* pointer if this widget is an *FI_Window*.
- unsigned int **border** () const
See void *FI_Window::border(int)*
- void **border** (int b)
Sets whether or not the window manager border is around the window.
- void **clear_border** ()
Fast inline function to turn the window manager border off.
- void **clear_modal_states** ()
Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.
- void **copy_label** (const char *a)
Sets the window titlebar label to a copy of a character string.
- void **cursor** (const [FI_RGB_Image](#) *, int, int)
Changes the cursor for this window.
- void **cursor** ([FI_Cursor](#) c, [FI_Color](#), [FI_Color](#)=FL_WHITE)
For back compatibility only.
- void **cursor** ([FI_Cursor](#))
Changes the cursor for this window.
- int **decorated_h** ()

- Returns the window height including any window title bar and any frame added by the window manager.*

 - int **decorated_w** ()

Returns the window width including any frame added by the window manager.

 - void **default_cursor** (FI_Cursor c, FI_Color, FI_Color=FL_WHITE)

For back compatibility only.

 - void **default_cursor** (FI_Cursor)

Sets the default window cursor.

 - FI_Window (int w, int h, const char *title=0)

Creates a window from the given size and title.

 - FI_Window (int x, int y, int w, int h, const char *title=0)

Creates a window from the given position, size and title.

 - void **free_position** ()

*Undoes the effect of a previous **resize()** or **show()** so that the next time **show()** is called the window manager is free to position the window.*

 - void **fullscreen** ()

Makes the window completely fill one or more screens, without any window manager border visible.

 - unsigned int **fullscreen_active** () const

Returns non zero if FULLSCREEN flag is set, 0 otherwise.

 - void **fullscreen_off** ()

*Turns off any side effects of **fullscreen()***

 - void **fullscreen_off** (int X, int Y, int W, int H)

*Turns off any side effects of **fullscreen()** and does **resize(x,y,w,h)**.*

 - void **fullscreen_screens** (int top, int bottom, int left, int right)

Sets which screens should be used when this window is in fullscreen mode.

 - virtual int **handle** (int)

Handles the specified event.

 - virtual void **hide** ()

Removes the window from the screen.

 - void **hotspot** (const FI_Widget &p, int offscreen=0)

See void FI_Window::hotspot(int x, int y, int offscreen = 0)

 - void **hotspot** (const FI_Widget *, int offscreen=0)

See void FI_Window::hotspot(int x, int y, int offscreen = 0)

 - void **hotspot** (int x, int y, int offscreen=0)

Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.

 - const void * **icon** () const

Gets the current icon window target dependent data.

 - void **icon** (const FI_RGB_Image *)

Sets or resets a single window icon.

 - void **icon** (const void *ic)

Sets the current icon window target dependent data.

 - void **iconize** ()

Iconifies the window.

 - const char * **iconlabel** () const

See void FI_Window::iconlabel(const char)*

 - void **iconlabel** (const char *)

Sets the icon label.

 - void **icons** (const FI_RGB_Image *[], int)

Sets the window icons.

 - const char * **label** () const

See void [FL_Window::label\(const char*\)](#)

- void **label** (const char *)
Sets the window title bar label.
- void **label** (const char *label, const char *iconlabel)
Sets the icon label.
- void [make_current](#) ()
Sets things up so that the drawing functions in <FL/fl_draw.H> will go into this window.
- unsigned int **menu_window** () const
Returns true if this window is a menu window.
- unsigned int [modal](#) () const
Returns true if this window is modal.
- unsigned int **non_modal** () const
Returns true if this window is modal or non-modal.
- unsigned int **override** () const
Returns non zero if FL_OVERRIDE flag is set, 0 otherwise.
- virtual void [resize](#) (int X, int Y, int W, int H)
Changes the size and position of the window.
- void [set_menu_window](#) ()
Marks the window as a menu window.
- void [set_modal](#) ()
A "modal" window, when [shown\(\)](#), will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).
- void [set_non_modal](#) ()
A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a [modal\(\)](#) one in that it remains on top, but it has no effect on event delivery.
- void **set_override** ()
Activates the flags NOBORDER|FL_OVERRIDE.
- void [set_tooltip_window](#) ()
Marks the window as a tooltip window.
- void [shape](#) (const [FL_Image](#) &b)
Set the window's shape with an [FL_Image](#).
- void [shape](#) (const [FL_Image](#) *img)
Assigns a non-rectangular shape to the window.
- void [show](#) (int argc, char **argv)
Puts the window on the screen and parses command-line arguments.
- int [shown](#) ()
Returns non-zero if [show\(\)](#) has been called (but not [hide\(\)](#)).
- void [size_range](#) (int minw, int minh, int maxw=0, int maxh=0, int dw=0, int dh=0, int aspect=0)
Sets the allowable range the user can resize this window to.
- unsigned int **tooltip_window** () const
Returns true if this window is a tooltip window.
- void [wait_for_expose](#) ()
Waits for the window to be displayed after calling [show\(\)](#).
- int **x_root** () const
Gets the x position of the window on the screen.
- const char * [xclass](#) () const
Returns the xclass for this window, or a default.
- void [xclass](#) (const char *c)
Sets the xclass for this window.
- int **y_root** () const
Gets the y position of the window on the screen.
- virtual [~FL_Window](#) ()
The destructor also deletes all the children.

Public Member Functions inherited from FI_Group

- [FI_Widget](#) * & [_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FI_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FI_Widget](#) *o)
See void [FI_Group::add\(FI_Widget &w\)](#)
- void [add_resizable](#) ([FI_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FI_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FI_Widget](#) * [child](#) (int n) const
Returns [array\(\)\[n\]](#).
- int [children](#) () const
Returns how many child widgets the group has.
- void [clear](#) ()
Deletes all child widgets from memory recursively.
- unsigned int [clip_children](#) ()
Returns the current clipping mode.
- void [clip_children](#) (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void [end](#) ()
Exactly the same as [current\(this->parent\(\)\)](#).
- int [find](#) (const [FI_Widget](#) &o) const
*See int [FI_Group::find\(const FI_Widget *w\) const](#).*
- int [find](#) (const [FI_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FI_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FI_Group](#) widget using the given position, size, and label string.
- void [focus](#) ([FI_Widget](#) *W)
- void [forms_end](#) ()
This is for forms compatibility only.
- void [init_sizes](#) ()
Resets the internal array of widget sizes and positions.
- void [insert](#) ([FI_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void [insert](#) ([FI_Widget](#) &o, [FI_Widget](#) *before)
This does [insert\(w, find\(before\)\)](#).
- void [remove](#) ([FI_Widget](#) &)
Removes a widget from the group but does not delete it.
- void [remove](#) ([FI_Widget](#) *o)
Removes the widget o from the group.
- void [remove](#) (int index)
Removes the widget at `index` from the group but does not delete it.
- [FI_Widget](#) * [resizable](#) () const
*See void [FI_Group::resizable\(FI_Widget *box\)](#)*

- void **resizable** (FI_Widget &o)
*See void FI_Group::resizable(FI_Widget *box)*
- void **resizable** (FI_Widget *o)
The resizable widget defines the resizing box for the group.
- virtual **~FI_Group** ()
The destructor also deletes all the children.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (FI_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_GI_Window * as_gl_window** ()
Returns an FI_GI_Window pointer if this widget is an FI_GI_Window.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (FI_Boxtype new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (FI_Callback *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback *cb, void *p)
Sets the current callback function for the widget.
- void **callback** (FI_Callback0 *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback1 *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (uchar c=0)
Clears or sets the damage flags.
- void **clear_output** ()
Sets a widget to accept input.

- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FL_Color` bg)
Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `deimage` () const
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `image` () const
- void `image` (`FL_Image` &img)

- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` *img)
- Sets the image to use as part of the widget label.*

 - int `inside` (const `FI_Widget` *wgt) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.
- void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)

Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const

Gets the label color.
- void `labelcolor` (`FI_Color` c)

Sets the label color.
- `FI_Font` `labelfont` () const

Gets the font to use.
- void `labelfont` (`FI_Font` f)

Sets the font to use.
- `FI_Fontsize` `labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)

Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

Gets the label type.
- void `labeltype` (`FI_Labeltype` a)

Sets the label type.
- void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `FI_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`FI_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.

- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Window](#)

- static [FI_Window](#) * [current](#) ()
Returns the last window that was made current.
- static void [default_callback](#) ([FI_Window](#) *, void *v)
Back compatibility: Sets the default callback v for win to call on close event.
- static void [default_icon](#) (const [FI_RGB_Image](#) *)
Sets a single default window icon.
- static void [default_icons](#) (const [FI_RGB_Image](#) *[], int)
Sets the default window icons.
- static const char * [default_xclass](#) ()
Returns the default xclass.
- static void [default_xclass](#) (const char *)
Sets the default window xclass.

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Window](#)

- virtual void [draw](#) ()
Draws the widget.
- int [force_position](#) () const
Returns the internal state of the window's FORCE_POSITION flag.
- void [force_position](#) (int force)

Sets an internal flag that tells FLTK and the window manager to honor position requests.

- void `free_icons` ()

Deletes all icons previously attached to the window.

Protected Member Functions inherited from `FI_Group`

- void `draw_child` (`FI_Widget` &widget) const

Forces a child to redraw.

- void `draw_children` ()

Draws all children of the group.

- void `draw_outside_label` (const `FI_Widget` &widget) const

Parents normally call this to draw outside labels of child widgets.

- int * `sizes` ()

Returns the internal array of widget sizes and positions.

- void `update_child` (`FI_Widget` &widget) const

Draws a child only if it needs it.

Protected Member Functions inherited from `FI_Widget`

- void `clear_flag` (unsigned int c)

Clears a flag in the flags mask.

- void `draw_backdrop` () const

If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.

- void `draw_box` () const

Draws the widget box according its box style.

- void `draw_box` (`FI_Boxtype` t, `FI_Color` c) const

Draws a box of type t, of color c at the widget's position and size.

- void `draw_box` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` c) const

Draws a box of type t, of color c at the position X,Y and size W,H.

- void `draw_focus` ()

draws a focus rectangle around the widget

- void `draw_focus` (`FI_Boxtype` t, int x, int y, int w, int h) const

Draws a focus box for the widget at the given position and size.

- void `draw_label` () const

Draws the widget's label at the defined label position.

- void `draw_label` (int, int, int, int) const

Draws the label in an arbitrary bounding box.

- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)

Creates a widget at the given position and size.

- unsigned int `flags` () const

Gets the widget flags mask.

- void `h` (int v)

Internal use only.

- void `set_flag` (unsigned int c)

Sets a flag in the flags mask.

- void `w` (int v)

Internal use only.

- void `x` (int v)

Internal use only.

- void `y` (int v)

Internal use only.

Protected Attributes inherited from [FI_Window](#)

- [shape_data_type](#) * [shape_data_](#)
non-null means the window has a non-rectangular shape

Static Protected Attributes inherited from [FI_Window](#)

- static [FI_Window](#) * [current_](#)
Stores the last window that was made current.

9.125.1 Detailed Description

This is the same as [FI_Window](#).

However, it is possible that some implementations will provide double-buffered windows by default. This subclass can be used to force single-buffering. This may be useful for modifying existing programs that use incremental update, or for some types of image data, such as a movie flipbook.

9.125.2 Member Function Documentation

9.125.2.1 flush()

```
void Fl_Single_Window::flush ( ) [virtual]
```

Forces the window to be drawn, this window is also made current and calls [draw\(\)](#).

Reimplemented from [FI_Window](#).

9.125.2.2 show()

```
void Fl_Single_Window::show ( ) [virtual]
```

Puts the window on the screen.

Usually (on X) this has the side effect of opening the display.

If the window is already shown then it is restored and raised to the top. This is really convenient because your program can call [show\(\)](#) at any time, even if the window is already up. It also means that [show\(\)](#) serves the purpose of [raise\(\)](#) in other toolkits.

[FI_Window::show\(int argc, char **argv\)](#) is used for top-level windows and allows standard arguments to be parsed from the command-line.

Note

For some obscure reasons [FI_Window::show\(\)](#) resets the current group by calling [FI_Group::current\(0\)](#). The comments in the code say "get rid of very common user bug: forgot end()". Although this is true it may have unwanted side effects if you [show\(\)](#) an unrelated window (maybe for an error message or warning) while building a window or any other group widget.

Todo Check if we can remove resetting the current group in a later FLTK version (after 1.3.x). This may break "already broken" programs though if they rely on this "feature".

9.126 FI_Slider Class Reference

The [FI_Slider](#) widget contains a sliding knob inside a box.

```
#include <Fl_Slider.H>
```

Inheritance diagram for FI_Slider:

Public Member Functions

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **FI_Slider** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Slider widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new FI_Slider widget using the given type, position, size, and label string.
- int **handle** (int)
Handles the specified event.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- **FI_Boxtype slider** () const
Gets the slider box type.
- void **slider** (FI_Boxtype c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)

- Sets the minimum and maximum values for the valuator.*
- double **round** (double)
 - Round the passed value to the nearest step increment.*
- double **step** () const
 - Gets or sets the step value.*
- void **step** (double a, int b)
 - See double [FI_Valuator::step\(\)](#) const*
- void **step** (double s)
 - See double [FI_Valuator::step\(\)](#) const.*
- void **step** (int a)
 - See double [FI_Valuator::step\(\)](#) const*
- double **value** () const
 - Gets the floating point(double) value.*
- int **value** (double)
 - Sets the current value.*

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- [FI_Align](#) **align** () const
 - Gets the label alignment.*
- void **align** ([FI_Align](#) alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_GI_Window](#) * **as_gl_window** ()
 - Returns an [FI_GI_Window](#) pointer if this widget is an [FI_GI_Window](#).*
- virtual [FI_Group](#) * **as_group** ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Window](#) * **as_window** ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- [FI_Boxtype](#) **box** () const
 - Gets the box type of the widget.*
- void **box** ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) **callback** () const
 - Gets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function for the widget.*

- void `callback` (`FI_Callback0 *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1 *cb`, long `p=0`)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color color` () const
Gets the background color of the widget.
- void `color` (`FI_Color bg`)
Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)
Sets the background and selection color of the widget.
- `FI_Color color2` () const
For back compatibility only.
- void `color2` (unsigned `a`)
For back compatibility only.
- int `contains` (const `FI_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (const char `*new_label`)
Sets the current label.
- void `copy_tooltip` (const char `*text`)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)
Sets the damage bits for the widget.
- void `damage` (`uchar c`, int `x`, int `y`, int `w`, int `h`)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FI_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)
Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image *img`)
Sets the image to use as part of the widget label.

- void `do_callback ()`
Calls the widget callback.
- void `do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
- void `do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
- void `draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h () const`
Gets the widget height.
- virtual void `hide ()`
Makes a widget invisible.
- `FI_Image * image ()`
Gets the image that is used as part of the widget label.
- const `FI_Image * image () const`
- void `image (FI_Image &img)`
Sets the image to use as part of the widget label.
- void `image (FI_Image *img)`
Sets the image to use as part of the widget label.
- int `inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- int `is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- const char * `label () const`
Gets the current label text.
- void `label (const char *text)`
Sets the current label pointer.
- void `label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`
Gets the label color.
- void `labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- void `labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fontsize labelsize () const`
Gets the font size in pixels.
- void `labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- void `labeltype (FI_Labeltype a)`
Sets the label type.
- void `measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- unsigned int `output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.

- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (`int X`, `int Y`)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (`int x`, `int y`, `int w`, `int h`)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (`int W`, `int H`)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (`const char *text`)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (`int &xoff`, `int &yoff`) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar t`)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (`void *v`)

- *Sets the user data for this widget.*
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FL_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FL_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FL_Widget` ()
Destroys the widget.

Protected Member Functions

- void `draw` ()
Draws the widget.
- void `draw` (int, int, int, int)
- int `handle` (int, int, int, int, int)

Protected Member Functions inherited from `FL_Valuator`

- `FL_Valuator` (int X, int Y, int W, int H, const char *L)
Creates a new `FL_Valuator` widget using the given position, size, and label string.
- void `handle_drag` (double newvalue)
Called during a drag operation, after an `FL_WHEN_CHANGED` event is received and before the callback.
- void `handle_push` ()
Stores the current value in the previous value.
- void `handle_release` ()
Called after an `FL_WHEN_RELEASE` event is received and before the callback.
- int `horizontal` () const
Tells if the valuator is an `FL_HORIZONTAL` one.
- double `previous_value` () const
Gets the previous floating point value before an event changed it.
- void `set_value` (double v)
Sets the current floating point value.
- double `softclamp` (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void `value_damage` ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
 - [INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
 - [FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
 - ,
 - [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
 - ,
 - [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
 - ,
 - [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#) = 1<<19 ,
 - [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

9.126.1 Detailed Description

The [Fl_Slider](#) widget contains a sliding knob inside a box.

It is often used as a scrollbar. Moving the box all the way to the top/left sets it to the [minimum\(\)](#), and to the bottom/right to the [maximum\(\)](#). The [minimum\(\)](#) may be greater than the [maximum\(\)](#) to reverse the slider direction.

Use void [Fl_Widget::type\(int\)](#) to set how the slider is drawn, which can be one of the following:

- [FL_VERTICAL](#) - Draws a vertical slider (this is the default).
- [FL_HORIZONTAL](#) - Draws a horizontal slider.
- [FL_VERT_FILL_SLIDER](#) - Draws a filled vertical slider, useful as a progress or value meter.
- [FL_HOR_FILL_SLIDER](#) - Draws a filled horizontal slider, useful as a progress or value meter.
- [FL_VERT_NICE_SLIDER](#) - Draws a vertical slider with a nice looking control knob.
- [FL_HOR_NICE_SLIDER](#) - Draws a horizontal slider with a nice looking control knob.

Figure 9.32 [Fl_Slider](#)

9.126.2 Constructor & Destructor Documentation

9.126.2.1 [Fl_Slider\(\)](#)

```
Fl_Slider::Fl_Slider (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [Fl_Slider](#) widget using the given position, size, and label string. The default boxtype is [FL_DOWN_BOX](#).

9.126.3 Member Function Documentation

9.126.3.1 bounds()

```
void Fl_Slider::bounds (
    double a,
    double b )
```

Sets the minimum (a) and maximum (b) values for the valuator widget. if at least one of the values is changed, a partial redraw is asked.

9.126.3.2 draw()

```
void Fl_Slider::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                          // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

Reimplemented in [Fl_Value_Slider](#).

9.126.3.3 handle()

```
int Fl_Slider::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

Reimplemented in [Fl_Value_Slider](#).

9.126.3.4 scrollvalue()

```
int Fl_Slider::scrollvalue (
    int pos,
    int size,
    int first,
    int total )
```

Sets the size and position of the sliding knob in the box.

Parameters

in	<i>pos</i>	position of first line displayed
in	<i>size</i>	size of window in lines
in	<i>first</i>	number of first line
in	<i>total</i>	total number of lines Returns <code>Fl_Valuator::value(p)</code>

9.126.3.5 slider_size()

```
void Fl_Slider::slider_size (
    double v )
```

Set the dimensions of the moving piece of slider.

This is the fraction of the size of the entire widget. If you set this to 1 then the slider cannot move. The default value is .08.

For the "fill" sliders this is the size of the area around the end that causes a drag effect rather than causing the slider to jump to the mouse.

The documentation for this class was generated from the following files:

- `Fl_Slider.H`
- `Fl_Slider.cxx`

9.127 Fl_Spinner Class Reference

This widget is a combination of the input widget and repeat buttons.

```
#include <Fl_Spinner.H>
```

Inheritance diagram for `Fl_Spinner`:

**Public Member Functions**

- `Fl_Color color ()` const
Return the background color of the spinner widget's input field.
- `void color (Fl_Color v)`
Change the background color of the spinner widget's input field.
- `Fl_Spinner (int X, int Y, int W, int H, const char *L=0)`
Creates a new `Fl_Spinner` widget using the given position, size, and label string.
- `const char * format ()`
Sets or returns the format string for the value.
- `void format (const char *f)`
Sets or returns the format string for the value.
- `int handle (int event)`
Handles the specified event.
- `double maximum ()` const
Gets the maximum value of the widget.
- `void maximum (double m)`
Sets the maximum value of the widget.

- double [maximum](#) () const
Speling mistakes retained for source compatibility.
- double **minimum** () const
Gets the minimum value of the widget.
- void **minimum** (double m)
Sets the minimum value of the widget.
- double [mininum](#) () const
Speling mistakes retained for source compatibility.
- void **range** (double a, double b)
Sets the minimum and maximum values for the widget.
- void [resize](#) (int X, int Y, int W, int H)
Resizes the [FI_Group](#) widget and all of its children.
- [FI_Color](#) **selection_color** () const
Return the selection color of the spinner widget's input field.
- void **selection_color** ([FI_Color](#) val)
Change the selection color of the spinner widget's input field.
- double [step](#) () const
Sets or returns the amount to change the value when the user clicks a button.
- void **step** (double s)
See double [FI_Spinner::step\(\)](#) const.
- [FI_Color](#) **textcolor** () const
Gets the color of the text in the input field.
- void **textcolor** ([FI_Color](#) c)
Sets the color of the text in the input field.
- [FI_Font](#) **textfont** () const
Gets the font of the text in the input field.
- void **textfont** ([FI_Font](#) f)
Sets the font of the text in the input field.
- [FI_Fontsize](#) **textsize** () const
Gets the size of the text in the input field.
- void **textsize** ([FI_Fontsize](#) s)
Sets the size of the text in the input field.
- [uchar](#) **type** () const
Gets the numeric representation in the input field.
- void **type** ([uchar](#) v)
Sets the numeric representation in the input field.
- double **value** () const
Gets the current value of the widget.
- void **value** (double v)
Sets the current value of the widget.

Public Member Functions inherited from [FI_Group](#)

- [FI_Widget](#) *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** ([FI_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FI_Widget](#) *o)
See void [FI_Group::add\(FI_Widget &w\)](#)
- void **add_resizable** ([FI_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.

- `FL_Widget *const * array () const`
Returns a pointer to the array of children.
- virtual `FL_Group * as_group ()`
Returns an `FL_Group` pointer if this widget is an `FL_Group`.
- void `begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `FL_Widget * child (int n) const`
Returns `array()[n]`.
- int `children () const`
Returns how many child widgets the group has.
- void `clear ()`
Deletes all child widgets from memory recursively.
- unsigned int `clip_children ()`
Returns the current clipping mode.
- void `clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void `end ()`
Exactly the same as `current(this->parent())`.
- int `find (const FL_Widget &o) const`
See `int FL_Group::find(const FL_Widget *w) const`.
- int `find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new `FL_Group` widget using the given position, size, and label string.
- void `focus (FL_Widget *W)`
- void `forms_end ()`
This is for forms compatibility only.
- void `init_sizes ()`
Resets the internal array of widget sizes and positions.
- void `insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- void `insert (FL_Widget &o, FL_Widget *before)`
This does `insert(w, find(before))`.
- void `remove (FL_Widget &)`
Removes a widget from the group but does not delete it.
- void `remove (FL_Widget *o)`
Removes the widget `o` from the group.
- void `remove (int index)`
Removes the widget at `index` from the group but does not delete it.
- `FL_Widget * resizable () const`
See `void FL_Group::resizable(FL_Widget *box)`
- void `resizable (FL_Widget &o)`
See `void FL_Group::resizable(FL_Widget *box)`
- void `resizable (FL_Widget *o)`
The resizable widget defines the resizing box for the group.
- virtual `~FL_Group ()`
The destructor also deletes all the children.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window * as_gl_window** ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual **FI_Window * as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback0** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1** *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (**uchar** c=0)
Clears or sets the damage flags.
- void **clear_output** ()
Sets a widget to accept input.
- void **clear_visible** ()
Hides the widget.
- void **clear_visible_focus** ()
Disables keyboard focus navigation with this widget.
- **FI_Color color** () const

- Gets the background color of the widget.*

 - void `color` (`FI_Color` bg)
- Sets the background color of the widget.*

 - void `color` (`FI_Color` bg, `FI_Color` sel)
- Sets the background and selection color of the widget.*

 - `FI_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const `FI_Widget` *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (`uchar` c)
- Sets the damage bits for the widget.*

 - void `damage` (`uchar` c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FI_Image` * `deimage` ()
- Gets the image that is used as part of the widget label.*

 - const `FI_Image` * `deimage` () const
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FI_Image` &img)
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FI_Image` *img)
- Sets the image to use as part of the widget label.*

 - void `do_callback` ()
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget` *o, long arg)
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget` *o, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `FI_Align`) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int `h` () const
- Gets the widget height.*

 - virtual void `hide` ()
- Makes a widget invisible.*

 - `FI_Image` * `image` ()
- Gets the image that is used as part of the widget label.*

 - const `FI_Image` * `image` () const
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` &img)
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` *img)
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` *img)

- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()

- Makes the widget visible.*

 - void `set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- virtual void `show ()`
Makes a widget visible.
- void `size (int W, int H)`
Changes the size of the widget.
- int `take_focus ()`
Gives the widget the keyboard focus.
- unsigned int `takeevents () const`
Returns if the widget is able to take events.
- int `test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip () const`
Gets the current tooltip text.
- void `tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- void `type (uchar t)`
Sets the widget type.
- int `use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data () const`
Gets the user data for this widget.
- void `user_data (void *v)`
Sets the user data for this widget.
- unsigned int `visible () const`
Returns whether a widget is visible.
- unsigned int `visible_focus ()`
Checks whether this widget has a visible focus.
- void `visible_focus (int v)`
Modifies keyboard focus navigation.
- int `visible_r () const`
Returns whether a widget and all its parents are visible.
- int `w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- void `when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x () const`
Gets the widget position in its window.
- int `y () const`
Gets the widget position in its window.
- virtual `~Fl_Widget ()`
Destroys the widget.

Protected Attributes

- [FI_Repeat_Button](#) `down_button_`
- [FI_Input](#) `input_`
- [FI_Repeat_Button](#) `up_button_`

Additional Inherited Members**Static Public Member Functions inherited from [FI_Group](#)**

- static [FI_Group](#) * `current` ()
Returns the currently active group.
- static void `current` ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void `default_callback` ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Group](#)

- void `draw` ()
Draws the widget.
- void `draw_child` ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void `draw_children` ()
Draws all children of the group.
- void `draw_outside_label` (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * `sizes` ()
Returns the internal array of widget sizes and positions.
- void `update_child` ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.127.1 Detailed Description

This widget is a combination of the input widget and repeat buttons. The user can either type into the input area or use the buttons to change the value.

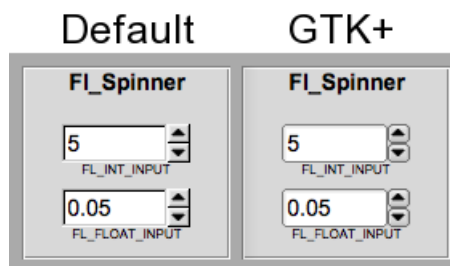

Figure 9.33 `FI_Spinner` widget

9.127.2 Constructor & Destructor Documentation

9.127.2.1 Fl_Spinner()

```
Fl_Spinner::Fl_Spinner (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new [Fl_Spinner](#) widget using the given position, size, and label string.
Inherited destructor Destroys the widget and any value associated with it.

9.127.3 Member Function Documentation

9.127.3.1 handle()

```
int Fl_Spinner::handle (
    int event ) [inline], [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

9.127.3.2 maximum()

```
double Fl_Spinner::maximum ( ) const [inline]
```

Speling mistakes retained for source compatibility.

Deprecated

9.127.3.3 minimum()

```
double Fl_Spinner::minimum ( ) const [inline]
```

Speling mistakes retained for source compatibility.

Deprecated

9.127.3.4 resize()

```
void Fl_Spinner::resize (
    int X,
```

```

    int Y,
    int W,
    int H ) [inline], [virtual]

```

Resizes the [Fl_Group](#) widget and all of its children.

The [Fl_Group](#) widget first resizes itself, and then it moves and resizes all its children according to the rules documented for [Fl_Group::resizable\(Fl_Widget*\)](#)

See also

[Fl_Group::resizable\(Fl_Widget*\)](#)

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

9.127.3.5 step()

```
double Fl_Spinner::step ( ) const [inline]
```

Sets or returns the amount to change the value when the user clicks a button.

Before setting step to a non-integer value, the spinner [type\(\)](#) should be changed to floating point.

9.127.3.6 type() [1/2]

```
uchar Fl_Spinner::type ( ) const [inline]
```

Gets the numeric representation in the input field.

See also

[Fl_Spinner::type\(uchar\)](#)

9.127.3.7 type() [2/2]

```
void Fl_Spinner::type (
    uchar v ) [inline]
```

Sets the numeric representation in the input field.

Valid values are `FL_INT_INPUT` and `FL_FLOAT_INPUT`. Also changes the [format\(\)](#) template. Setting a new spinner type via a superclass pointer will not work.

Note

`type` is not a virtual function.

9.127.3.8 value()

```
void Fl_Spinner::value (
    double v ) [inline]
```

Sets the current value of the widget.

Before setting value to a non-integer value, the spinner [type\(\)](#) should be changed to floating point.

The documentation for this class was generated from the following files:

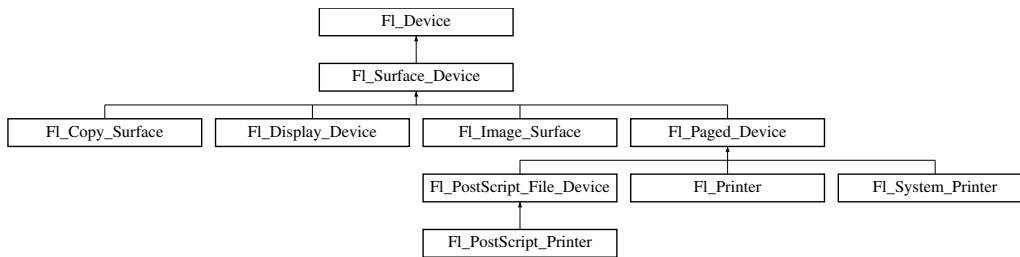

- `Fl_Spinner.H`
- `Fl_Group.cxx`

9.128 Fl_Surface_Device Class Reference

A drawing surface that's susceptible to receive graphical output.

```
#include <Fl_Device.H>
```

Inheritance diagram for `Fl_Surface_Device`:

Public Member Functions

- `const char * class_name ()`
Returns the name of the class of this object.
- `FI_Graphics_Driver * driver ()`
Returns the graphics driver of this drawing surface.
- `void driver (FI_Graphics_Driver *graphics_driver)`
Sets the graphics driver of this drawing surface.
- `virtual void set_current (void)`
Make this surface the current drawing surface.
- `virtual ~FI_Surface_Device ()`
The destructor.

Public Member Functions inherited from FI_Device

- `virtual ~FI_Device ()`
Virtual destructor.

Static Public Member Functions

- `static FI_Surface_Device * surface ()`
The current drawing surface.

Static Public Attributes

- `static const char * class_id = "FI_Surface_Device"`

Static Public Attributes inherited from FI_Device

- `static const char * class_id = "FI_Device"`
A string that identifies each subclass of FI_Device.

Protected Member Functions

- `FI_Surface_Device (FI_Graphics_Driver *graphics_driver)`
Constructor that sets the graphics driver to use for the created surface.

9.128.1 Detailed Description

A drawing surface that's susceptible to receive graphical output.

Any FLTK application has at any time a current drawing surface to which all drawing requests are directed. The current surface is given by `FI_Surface_Device::surface()`. When `main()` begins running, the current drawing surface has been set to the computer's display, an instance of the `FI_Display_Device` class.

A drawing surface other than the computer's display, is typically used as follows:

1. Create `surface`, an object from a particular `FI_Surface_Device` derived class (e.g., `FI_Copy_Surface`, `FI_Printer`).

2. Memorize what is the current drawing surface with `Fl_Surface_Device *old_current = Fl_Surface_Device::surface();`
3. Call `surface->set_current();` to redirect all graphics requests to `surface` which becomes the new current drawing surface (not necessary with class `Fl_Printer` because it is done by `Fl_Printer::start_job()`).
4. At this point any of the [Drawing functions](#) (e.g., `fl_rect()`) or the [Color & Font functions](#) or [Drawing Images functions](#) (e.g., `fl_draw_image()`, `Fl_Image::draw()`) operates on the new current drawing surface. Certain drawing surfaces allow additional ways to draw to them (e.g., `Fl_Printer::print_widget()`, `Fl_Image_Surface::draw()`).
5. After all drawing requests have been performed, redirect graphics requests back to their previous destination with `old_current->set_current();`
6. Delete `surface`.

9.128.2 Member Function Documentation

9.128.2.1 class_name()

```
const char * Fl_Surface_Device::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the `class_name()` function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an `Fl_Device` subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_Device](#).

Reimplemented in [Fl_System_Printer](#).

9.128.2.2 set_current()

```
void Fl_Surface_Device::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Reimplemented in [Fl_Copy_Surface](#), [Fl_Image_Surface](#), and [Fl_Printer](#).

9.128.2.3 surface()

```
static Fl_Surface_Device * Fl_Surface_Device::surface ( ) [inline], [static]
```

The current drawing surface.

In other words, the [Fl_Surface_Device](#) object that currently receives all graphics output

The documentation for this class was generated from the following files:

- [Fl_Device.H](#)
- [Fl_Device.cxx](#)

9.129 Fl_Sys_Menu_Bar Class Reference

A class to create, modify and delete menus that appear on Mac OS X in the menu bar at the top of the screen.

```
#include <Fl_Sys_Menu_Bar.H>
```

Inheritance diagram for `Fl_Sys_Menu_Bar`:

Public Member Functions

- `int add (const char *label, const char *shortcut, Fl_Callback *cb, void *user_data=0, int flags=0)`
Adds a new menu item.
- `int add (const char *label, int shortcut, Fl_Callback *, void *user_data=0, int flags=0)`
Add a new menu item to the system menu bar.
- `int add (const char *str)`
Forms-compatible procedure to add items to the system menu bar.
- `void clear ()`
Set the `Fl_Menu_Item` array pointer to null, indicating a zero-length menu.
- `int clear_submenu (int index)`
Clears the specified submenu pointed to by index of all menu items.
- `Fl_Sys_Menu_Bar (int x, int y, int w, int h, const char *l=0)`
The constructor.
- `void global ()`
Make the shortcuts for this menu work no matter what window has the focus when you type it.
- `int insert (int index, const char *label, const char *shortcut, Fl_Callback *cb, void *user_data=0, int flags=0)`
Insert a new menu item.
- `int insert (int index, const char *label, int shortcut, Fl_Callback *cb, void *user_data=0, int flags=0)`
insert in the system menu bar a new menu item
- `const Fl_Menu_Item * menu () const`
Return the system menu's array of `Fl_Menu_Item`'s.
- `void menu (const Fl_Menu_Item *m)`
create a system menu bar using the given list of menu structs
- `int mode (int i) const`
Gets the flags of item i.
- `void mode (int i, int fl)`
Sets the flags of item i.
- `void remove (int n)`
remove an item from the system menu bar
- `void replace (int index, const char *name)`
rename an item from the system menu bar
- `void setonly (Fl_Menu_Item *item)`
Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
- `void shortcut (int i, int s)`
Changes the shortcut of item i to n.
- `void update ()`
Updates the system menu after any change to its items.
- `~Fl_Sys_Menu_Bar ()`
The destructor.

Public Member Functions inherited from [FI_Menu_Bar](#)

- [FI_Menu_Bar](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FI_Menu_Bar](#) widget using the given position, size, and label string.
- int [handle](#) (int)
Handles the specified event.

Public Member Functions inherited from [FI_Menu_](#)

- int [add](#) (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int [add](#) (const char *, int [shortcut](#), [FI_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int [add](#) (const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)
See int [FI_Menu_::add](#)(const char label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)*
- void [clear](#) ()
Same as [menu](#)(NULL), set the array pointer to null, indicating a zero-length menu.
- int [clear_submenu](#) (int index)
*Clears the specified submenu pointed to by *index* of all menu items.*
- void [copy](#) (const [FI_Menu_Item](#) *m, void *user_data=0)
Sets the menu array pointer with a copy of m that will be automatically deleted.
- [FI_Boxtype](#) [down_box](#) () const
This box type is used to surround the currently-selected items in the menus.
- void [down_box](#) ([FI_Boxtype](#) b)
See [FI_Boxtype](#) [FI_Menu_::down_box](#)() const
- [FI_Color](#) [down_color](#) () const
For back compatibility, same as [selection_color](#)()
- void [down_color](#) (unsigned c)
For back compatibility, same as [selection_color](#)()
- int [find_index](#) (const char *name) const
*Find the menu item index for a given menu *pathname*, such as "Edit/Copy".*
- int [find_index](#) (const [FI_Menu_Item](#) *item) const
*Find the index into the menu array for a given *item*.*
- int [find_index](#) ([FI_Callback](#) *cb) const
*Find the index into the menu array for a given callback *cb*.*
- const [FI_Menu_Item](#) * [find_item](#) (const char *name)
*Find the menu item for a given menu *pathname*, such as "Edit/Copy".*
- const [FI_Menu_Item](#) * [find_item](#) ([FI_Callback](#) *)
*Find the menu item for the given callback *cb*.*
- [FI_Menu_](#) (int, int, int, int, const char *=0)
Creates a new [FI_Menu_](#) widget using the given position, size, and label string.
- void [global](#) ()
Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int [insert](#) (int index, const char *, int [shortcut](#), [FI_Callback](#) *, void *=0, int=0)
*Inserts a new menu item at the specified *index* position.*
- int [insert](#) (int index, const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)
See int [FI_Menu_::insert](#)(const char label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)*
- int [item_pathname](#) (char *name, int namelen, const [FI_Menu_Item](#) *finditem=0) const
Get the menu 'pathname' for the specified menuitem.
- const [FI_Menu_Item](#) * [menu](#) () const

- Returns a pointer to the array of FI_Menu_Items.*

 - void **menu** (const FI_Menu_Item *m)
Sets the menu array pointer directly.
 - int **mode** (int i) const
Gets the flags of item i.
 - void **mode** (int i, int fl)
Sets the flags of item i.
 - const FI_Menu_Item * **mvalue** () const
Returns a pointer to the last menu item that was picked.
 - const FI_Menu_Item * **picked** (const FI_Menu_Item *)
When user picks a menu item, call this.
 - void **remove** (int)
Deletes item i from the menu.
 - void **replace** (int, const char *)
Changes the text of item i.
 - void **setonly** (FI_Menu_Item *item)
Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
 - void **shortcut** (int i, int s)
Changes the shortcut of item i to s.
 - int **size** () const
This returns the number of FI_Menu_Item structures that make up the menu, correctly counting submenus.
 - void **size** (int W, int H)
 - const FI_Menu_Item * **test_shortcut** ()
Returns the menu item with the entered shortcut (key value).
 - const char * **text** () const
Returns the title of the last item chosen.
 - const char * **text** (int i) const
Returns the title of item i.
 - FI_Color **textcolor** () const
Get the current color of menu item labels.
 - void **textcolor** (FI_Color c)
Sets the current color of menu item labels.
 - FI_Font **textfont** () const
Gets the current font of menu item labels.
 - void **textfont** (FI_Font c)
Sets the current font of menu item labels.
 - FI_Fontsize **textsize** () const
Gets the font size of menu item labels.
 - void **textsize** (FI_Fontsize c)
Sets the font size of menu item labels.
 - int **value** () const
Returns the index into menu() of the last item chosen by the user.
 - int **value** (const FI_Menu_Item *)
The value is the index into menu() of the last item chosen by the user.
 - int **value** (int i)
The value is the index into menu() of the last item chosen by the user.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#), void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0 *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1 *cb](#), long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar c=0](#))
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()

- Disables keyboard focus navigation with this widget.*

 - `FI_Color color () const`
Gets the background color of the widget.
 - `void color (FI_Color bg)`
Sets the background color of the widget.
 - `void color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
 - `FI_Color color2 () const`
For back compatibility only.
 - `void color2 (unsigned a)`
For back compatibility only.
 - `int contains (const FI_Widget *w) const`
Checks if w is a child of this widget.
 - `void copy_label (const char *new_label)`
Sets the current label.
 - `void copy_tooltip (const char *text)`
Sets the current tooltip text.
 - `uchar damage () const`
Returns non-zero if draw() needs to be called.
 - `void damage (uchar c)`
Sets the damage bits for the widget.
 - `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
 - `int damage_resize (int, int, int, int)`
Internal use only.
 - `void deactivate ()`
Deactivates the widget.
 - `FI_Image * deimage ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * deimage () const`
 - `void deimage (FI_Image &img)`
Sets the image to use as part of the widget label.
 - `void deimage (FI_Image *img)`
Sets the image to use as part of the widget label.
 - `void do_callback ()`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
 - `void draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - `int h () const`
Gets the widget height.
 - `virtual void hide ()`
Makes a widget invisible.
 - `FI_Image * image ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * image () const`
 - `void image (FI_Image &img)`
Sets the image to use as part of the widget label.

- void `image` (`FI_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const
Checks if this widget is a child of `wgt`.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color c`)
Sets the label color.
- `FI_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font f`)
Sets the font to use.
- `FI_Fonsize labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize pix`)
Sets the font size in pixels.
- `FI_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype a`)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width `ww` and height `hh` accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

- Marks the value of the widget as changed.*

 - void `set_output ()`
Sets a widget to output only.
 - void `set_visible ()`
Makes the widget visible.
 - void `set_visible_focus ()`
Enables keyboard focus navigation with this widget.
 - virtual void `show ()`
Makes a widget visible.
 - void `size (int W, int H)`
Changes the size of the widget.
 - int `take_focus ()`
Gives the widget the keyboard focus.
 - unsigned int `takeevents () const`
Returns if the widget is able to take events.
 - int `test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
 - const char * `tooltip () const`
Gets the current tooltip text.
 - void `tooltip (const char *text)`
Sets the current tooltip text.
 - `FI_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
 - `FI_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
 - `uchar type () const`
Gets the widget type.
 - void `type (uchar t)`
Sets the widget type.
 - int `use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
 - void * `user_data () const`
Gets the user data for this widget.
 - void `user_data (void *v)`
Sets the user data for this widget.
 - unsigned int `visible () const`
Returns whether a widget is visible.
 - unsigned int `visible_focus ()`
Checks whether this widget has a visible focus.
 - void `visible_focus (int v)`
Modifies keyboard focus navigation.
 - int `visible_r () const`
Returns whether a widget and all its parents are visible.
 - int `w () const`
Gets the widget width.
 - `FI_When when () const`
Returns the conditions under which the callback is called.
 - void `when (uchar i)`
Sets the flags used to decide when a callback is called.
 - `FI_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.

- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FI_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** ()
Draws the widget.

Protected Member Functions inherited from **FI_Menu_**

- int **item_pathname_** (char *name, int namelen, const **FI_Menu_Item** *finditem, const **FI_Menu_Item** *menu=0) const

Protected Member Functions inherited from **FI_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**FI_Boxtype** t, **FI_Color** c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (**FI_Boxtype** t, int x, int y, int w, int h, **FI_Color** c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (**FI_Boxtype** t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void `default_callback` (`FI_Widget *cb`, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
`INACTIVE = 1<<0`, `INVISIBLE = 1<<1`, `OUTPUT = 1<<2`, `NOBORDER = 1<<3`,
`FORCE_POSITION = 1<<4`, `NON_MODAL = 1<<5`, `SHORTCUT_LABEL = 1<<6`, `CHANGED = 1<<7`
, `OVERRIDE = 1<<8`, `VISIBLE_FOCUS = 1<<9`, `COPIED_LABEL = 1<<10`, `CLIP_CHILDREN = 1<<11`
, `MENU_WINDOW = 1<<12`, `TOOLTIP_WINDOW = 1<<13`, `MODAL = 1<<14`, `NO_OVERLAY = 1<<15`
, `GROUP_RELATIVE = 1<<16`, `COPIED_TOOLTIP = 1<<17`, `FULLSCREEN = 1<<18`, `MAC_USE_ACCENTS_MENU = 1<<19`,
`USERFLAG3 = 1<<29`, `USERFLAG2 = 1<<30`, `USERFLAG1 = 1<<31` }
flags possible values enumeration.

Protected Attributes inherited from FI_Menu_

- `uchar alloc`
- `uchar down_box_`
- `FI_Color textcolor_`
- `FI_Font textfont_`
- `FI_Fontsize textsize_`

9.129.1 Detailed Description

A class to create, modify and delete menus that appear on Mac OS X in the menu bar at the top of the screen.

On other than Mac OS X platforms, `FI_Sys_Menu_Bar` is a synonym of class `FI_Menu_Bar`.

To use this class, just replace `FI_Menu_Bar` by `FI_Sys_Menu_Bar`, and, on the Mac platform, a system menu at the top of the screen will be available. This menu will match an array of `FI_Menu_Item`'s exactly as with standard FLTK menus.

Changes to the menu state are immediately visible in the menubar when they are made using member functions of the `FI_Sys_Menu_Bar` class. Other changes (e.g., by a call to `FI_Menu_Item::set()`) should be followed by a call to `FI_Sys_Menu_Bar::update()` to be visible in the menubar across all platforms.

A few FLTK features are not supported by the Mac System menu:

- no symbolic labels
- no embossed labels
- no font sizes

You can configure a callback for the 'About' menu item to invoke your own code with `fl_mac_set_about()`.

9.129.2 Constructor & Destructor Documentation

9.129.2.1 Fl_Sys_Menu_Bar()

```
Fl_Sys_Menu_Bar::Fl_Sys_Menu_Bar (
    int x,
    int y,
    int w,
    int h,
    const char * l = 0 )
```

The constructor.

On Mac OS X, all arguments are unused. On other platforms they are used as by [Fl_Menu_Bar::Fl_Menu_Bar\(\)](#).

9.129.3 Member Function Documentation

9.129.3.1 add() [1/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * label,
    const char * shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0 ) [inline]
```

Adds a new menu item.

See also

[Fl_Menu_::add\(const char* label, int shortcut, Fl_Callback*, void *user_data=0, int flags=0\)](#)

9.129.3.2 add() [2/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * label,
    int shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0 )
```

Add a new menu item to the system menu bar.

Parameters

<i>label</i>	- new menu item's label
<i>shortcut</i>	- new menu item's integer shortcut (can be 0 for none, or e.g. FL_ALT+'x')
<i>cb</i>	- callback to be invoked when item selected (can be 0 for none, in which case the menubar's callback() can be used instead)
<i>user_data</i>	- argument to the callback
<i>flags</i>	- item's flags, e.g. FL_MENU_TOGGLE , etc.

Returns

the index into the menu() array, where the entry was added

See also

[Fl_Menu_::add\(const char* label, int shortcut, Fl_Callback *cb, void *user_data, int flags\)](#)

9.129.3.3 add() [3/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * str )
```

Forms-compatible procedure to add items to the system menu bar.

Returns

the index into the menu() array, where the entry was added

See also

[Fl_Menu_::add\(const char* str\)](#)

9.129.3.4 clear()

```
void Fl_Sys_Menu_Bar::clear ( )
```

Set the [Fl_Menu_Item](#) array pointer to null, indicating a zero-length menu.

See also

[Fl_Menu_::clear\(\)](#)

9.129.3.5 clear_submenu()

```
int Fl_Sys_Menu_Bar::clear_submenu (
    int index )
```

Clears the specified submenu pointed to by index of all menu items.

See also

[Fl_Menu_::clear_submenu\(int index\)](#)

9.129.3.6 draw()

```
void Fl_Sys_Menu_Bar::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                         // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Menu_Bar](#).

9.129.3.7 insert() [1/2]

```
int Fl_Sys_Menu_Bar::insert (
    int index,
    const char * label,
    const char * shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0 ) [inline]
```

Insert a new menu item.

See also

[Fl_Menu_::insert\(int index, const char* label, const char* shortcut, Fl_Callback *cb, void *user_data=0, int flags=0\)](#)

9.129.3.8 insert() [2/2]

```
int Fl_Sys_Menu_Bar::insert (
    int index,
    const char * label,
    int shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0 )
```

insert in the system menu bar a new menu item

Insert in the system menu bar a new menu item, with a title string, shortcut int, callback, argument to the callback, and flags.

Returns

the index into the menu() array, where the entry was inserted

See also

[Fl_Menu_::insert\(int index, const char* label, int shortcut, Fl_Callback *cb, void *user_data, int flags\)](#)

9.129.3.9 menu()

```
void Fl_Sys_Menu_Bar::menu (
    const Fl_Menu_Item * m )
```

create a system menu bar using the given list of menu structs

Author

Matthias Melcher

Parameters

<i>m</i>	list of Fl_Menu_Item
----------	--------------------------------------

9.129.3.10 mode()

```
void Fl_Sys_Menu_Bar::mode (
    int i,
    int fl ) [inline]
```

Sets the flags of item i.

See also

[Fl_Menu_::mode\(int i, int fl\)](#)

9.129.3.11 remove()

```
void Fl_Sys_Menu_Bar::remove (
    int index )
```

remove an item from the system menu bar

Parameters

<i>index</i>	the index of the item to remove
--------------	---------------------------------

9.129.3.12 replace()

```
void Fl_Sys_Menu_Bar::replace (
    int index,
    const char * name )
```

rename an item from the system menu bar

Parameters

<i>index</i>	the index of the item to rename
<i>name</i>	the new item name as a UTF8 string

The documentation for this class was generated from the following files:

- Fl_Sys_Menu_Bar.H
- Fl_Sys_Menu_Bar.mm

9.130 Fl_System_Printer Class Reference

Print support under MSWindows and Mac OS.

```
#include <Fl_Printer.H>
```

Inheritance diagram for Fl_System_Printer:

Public Member Functions

- const char * [class_name](#) ()
Returns the name of the class of this object.
- void [end_job](#) (void)
To be called at the end of a print job.
- int [end_page](#) (void)
To be called at the end of each page.
- void [margins](#) (int *left, int *top, int *right, int *bottom)
Computes the dimensions of margins that lie between the printable page area and the full page.
- void [origin](#) (int *x, int *y)
Computes the page coordinates of the current origin of graphics functions.
- void [origin](#) (int x, int y)
Sets the position in page coordinates of the origin of graphics functions.
- int [printable_rect](#) (int *w, int *h)
Computes the width and height of the printable area of the page.
- void [rotate](#) (float angle)
Rotates the graphics operations relatively to paper.
- void [scale](#) (float scale_x, float scale_y=0.)
Changes the scaling of page coordinates.
- int [start_job](#) (int pagecount, int *frompage=NULL, int *topage=NULL)

- *Starts a print job.*
- int [start_page](#) (void)
 - *Starts a new printed page.*
- void [translate](#) (int x, int y)
 - *Translates the current graphics origin accounting for the current rotation.*
- void [untranslate](#) (void)
 - *Undoes the effect of a previous [translate\(\)](#) call.*
- [~FI_System_Printer](#) (void)
 - *The destructor.*

Public Member Functions inherited from [FI_Paged_Device](#)

- virtual void [print_widget](#) ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)
 - *Draws the widget on the printed page.*
- void [print_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)
 - *Prints a window with its title bar and frame if any.*
- virtual void [print_window_part](#) ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
 - *Prints a rectangular part of an on-screen window.*
- virtual [~FI_Paged_Device](#) ()
 - *The destructor.*

Public Member Functions inherited from [FI_Surface_Device](#)

- [FI_Graphics_Driver](#) * [driver](#) ()
 - *Returns the graphics driver of this drawing surface.*
- void [driver](#) ([FI_Graphics_Driver](#) *graphics_driver)
 - *Sets the graphics driver of this drawing surface.*
- virtual [~FI_Surface_Device](#) ()
 - *The destructor.*

Public Member Functions inherited from [FI_Device](#)

- virtual [~FI_Device](#) ()
 - *Virtual destructor.*

- enum [Page_Layout](#) { [PORTRAIT](#) = 0 , [LANDSCAPE](#) = 0x100 , [REVERSED](#) = 0x200 , [ORIENTATION](#) = 0x300 }

Possible page formats.

Possible page layouts.

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * [surface](#) ()

The current drawing surface.

Protected Attributes inherited from [FI_Paged_Device](#)

- int [x_offset](#)
horizontal offset to the origin of graphics coordinates
- int [y_offset](#)
vertical offset to the origin of graphics coordinates

9.130.1 Detailed Description

Print support under MSWindows and Mac OS.

Class [FI_System_Printer](#) is implemented only on the MSWindows and Mac OS platforms. It has no public constructor. Use [FI_Printer](#) instead that is cross-platform and has the same API.

9.130.2 Member Function Documentation

9.130.2.1 `class_name()`

```
const char * Fl_System_Printer::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the `class_name()` function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an `Fl_Device` subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from `Fl_Paged_Device`.

9.130.2.2 `end_job()`

```
void Fl_System_Printer::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented from `Fl_Paged_Device`.

9.130.2.3 `end_page()`

```
int Fl_System_Printer::end_page (
    void ) [virtual]
```

To be called at the end of each page.

Returns

0 if OK, non-zero if any error.

Reimplemented from `Fl_Paged_Device`.

9.130.2.4 `margins()`

```
void Fl_System_Printer::margins (
    int * left,
    int * top,
    int * right,
    int * bottom ) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by `scale()` calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented from `Fl_Paged_Device`.

9.130.2.5 `origin()` [1/2]

```
void Fl_System_Printer::origin (
    int * x,
    int * y ) [virtual]
```

Computes the page coordinates of the current origin of graphics functions.

Parameters

out	<i>x</i>	If non-null, *x is set to the horizontal page offset of graphics origin.
out	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.130.2.6 origin() [2/2]

```
void Fl_System_Printer::origin (
    int x,
    int y ) [virtual]
```

Sets the position in page coordinates of the origin of graphics functions.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the page printable area. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls. Successive [origin\(\)](#) calls don't combine their effects.

Parameters

in	<i>x</i>	Horizontal position in page coordinates of the desired origin of graphics functions.
in	<i>y</i>	Same as above, vertically.

Reimplemented from [Fl_Paged_Device](#).

9.130.2.7 printable_rect()

```
int Fl_System_Printer::printable_rect (
    int * w,
    int * h ) [virtual]
```

Computes the width and height of the printable area of the page.

Values are in the same unit as that used by FLTK drawing functions, are unchanged by calls to [origin\(\)](#), but are changed by [scale\(\)](#) calls. Values account for the user-selected paper type and print orientation.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.130.2.8 rotate()

```
void Fl_System_Printer::rotate (
    float angle ) [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented from [Fl_Paged_Device](#).

9.130.2.9 scale()

```
void Fl_System_Printer::scale (
    float scale_x,
    float scale_y = 0. ) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<code>scale_x</code>	Horizontal dimensions of plot are multiplied by this quantity.
<code>scale_y</code>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented from [Fl_Paged_Device](#).

9.130.2.10 start_job()

```
int Fl_System_Printer::start_job (
    int pagecount,
    int * frompage = NULL,
    int * topage = NULL ) [virtual]
```

Starts a print job.

Parameters

in	<code>pagecount</code>	the total number of pages of the job (or 0 if you don't know the number of pages)
out	<code>frompage</code>	if non-null, <code>*frompage</code> is set to the first page the user wants printed
out	<code>topage</code>	if non-null, <code>*topage</code> is set to the last page the user wants printed

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.130.2.11 start_page()

```
int Fl_System_Printer::start_page (
    void ) [virtual]
```

Starts a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

9.130.2.12 translate()

```
void Fl_System_Printer::translate (
    int x,
    int y ) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

This function is only useful after a [rotate\(\)](#) call. Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call.

Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Paged_Device](#).

9.130.2.13 untranslate()

```
void Fl_System_Printer::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Paged_Device](#).

The documentation for this class was generated from the following files:

- [Fl_Printer.H](#)
- [Fl_Printer.cxx](#)

9.131 Fl_Table Class Reference

A table of widgets or other content.

```
#include <Fl_Table.H>
```

Inheritance diagram for Fl_Table:

Public Types

- enum `TableContext` {
`CONTEXT_NONE` = 0 , `CONTEXT_STARTPAGE` = 0x01 , `CONTEXT_ENDPAGE` = 0x02 , `CONTEXT_ROW_HEADER`
= 0x04 ,
`CONTEXT_COL_HEADER` = 0x08 , `CONTEXT_CELL` = 0x10 , `CONTEXT_TABLE` = 0x20 , `CONTEXT_RC_RESIZE`
= 0x40 }

The context bit flags for `Fl_Table` related callbacks.

Public Member Functions

- void `add` (`Fl_Widget` &wgt)
- void `add` (`Fl_Widget` *wgt)
- `Fl_Widget` *const * `array` ()
- void `begin` ()
- void `callback` (`Fl_Widget` *, void *)
Callbacks will be called depending on the setting of `Fl_Widget::when()`.
- int `callback_col` ()
Returns the current column the event occurred on.
- `TableContext` `callback_context` ()
Returns the current 'table context'.
- int `callback_row` ()
Returns the current row the event occurred on.
- `Fl_Widget` * `child` (int n) const
Returns the child widget by an index.
- int `children` () const
Returns the number of children in the table.
- virtual void `clear` ()
Clears the table to zero rows (`rows(0)`), zero columns (`cols(0)`), and clears any widgets (`table->clear()`) that were added with `begin()/end()` or `add()/insert()/etc.`
- int `col_header` ()
Returns if column headers are enabled or not.
- void `col_header` (int flag)
Enable or disable column headers.
- `Fl_Color` `col_header_color` ()
Gets the color for column headers.
- void `col_header_color` (`Fl_Color` val)

- Sets the color for column headers and redraws the table.*

 - int **col_header_height** ()
 - Gets the column header height.*
 - void **col_header_height** (int height)
 - Sets the height in pixels for column headers and redraws the table.*
 - int **col_position** ()
 - Returns the current column scroll position as a column number.*
 - void **col_position** (int col)
 - Sets the column scroll position to column 'col', and causes the screen to redraw.*
 - int **col_resize** ()
 - Returns if column resizing by the user is allowed.*
 - void **col_resize** (int flag)
 - Allows/disallows column resizing by the user.*
 - int **col_resize_min** ()
 - Returns the current column minimum resize value.*
 - void **col_resize_min** (int val)
 - Sets the current column minimum resize value.*
 - int **col_width** (int col)
 - Returns the current width of the specified column in pixels.*
 - void **col_width** (int col, int width)
 - Sets the width of the specified column in pixels, and the table is redrawn.*
 - void **col_width_all** (int width)
 - Convenience method to set the width of all columns to the same value, in pixels.*
 - int **cols** ()
 - Get the number of columns in the table.*
 - virtual void **cols** (int val)
 - Set the number of columns in the table and redraw.*
 - void **do_callback** (TableContext context, int row, int col)
 - void **draw** (void)
 - Draws the widget.*
 - void **end** ()
 - int **find** (const FI_Widget &wgt) const
 - int **find** (const FI_Widget *wgt) const
 - FI_Table (int X, int Y, int W, int H, const char *l=0)
 - The constructor for the FI_Table.*
 - void **get_selection** (int &row_top, int &col_left, int &row_bot, int &col_right)
 - Gets the region of cells selected (highlighted).*
 - void **init_sizes** ()
 - void **insert** (FI_Widget &wgt, FI_Widget *w2)
 - void **insert** (FI_Widget &wgt, int n)
 - int **is_interactive_resize** ()
 - Returns 1 if someone is interactively resizing a row or column.*
 - int **is_selected** (int r, int c)
 - See if the cell at row r and column c is selected.*
 - int **move_cursor** (int R, int C)
 - int **move_cursor** (int R, int C, int shiftselect)
 - void **remove** (FI_Widget &wgt)
 - void **resize** (int X, int Y, int W, int H)
 - Changes the size of the FI_Table, causing it to redraw.*
 - int **row_header** ()
 - Returns if row headers are enabled or not.*

- void `row_header` (int flag)
Enables/disables showing the row headers.
- `FI_Color` `row_header_color` ()
Returns the current row header color.
- void `row_header_color` (`FI_Color` val)
Sets the row header color and causes the screen to redraw.
- int `row_header_width` ()
Returns the current row header width (in pixels).
- void `row_header_width` (int width)
Sets the row header width to n and causes the screen to redraw.
- int `row_height` (int row)
Returns the current height of the specified row as a value in pixels.
- void `row_height` (int row, int height)
Sets the height of the specified row in pixels, and the table is redrawn.
- void `row_height_all` (int height)
Convenience method to set the height of all rows to the same value, in pixels.
- int `row_position` ()
Returns the current row scroll position as a row number.
- void `row_position` (int row)
Sets the row scroll position to 'row', and causes the screen to redraw.
- int `row_resize` ()
Returns if row resizing by the user is allowed.
- void `row_resize` (int flag)
Allows/disallows row resizing by the user.
- int `row_resize_min` ()
Returns the current row minimum resize value.
- void `row_resize_min` (int val)
Sets the current row minimum resize value.
- int `rows` ()
Returns the number of rows in the table.
- virtual void `rows` (int val)
Sets the number of rows in the table, and the table is redrawn.
- int `scrollbar_size` () const
Gets the current size of the scrollbars' troughs, in pixels.
- void `scrollbar_size` (int newSize)
Sets the pixel size of the scrollbars' troughs to newSize, in pixels.
- void `set_selection` (int row_top, int col_left, int row_bot, int col_right)
Sets the region of cells to be selected (highlighted).
- int `tab_cell_nav` () const
Get state of table's 'Tab' key cell navigation flag.
- void `tab_cell_nav` (int val)
Flag to control if Tab navigates table cells or not.
- void `table_box` (`FI_Boxtype` val)
Sets the kind of box drawn around the data table, the default being FL_NO_BOX.
- `FI_Boxtype` `table_box` (void)
Returns the current box type used for the data table.
- int `top_row` ()
Returns the current top row shown in the table.
- void `top_row` (int row)
Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn.
- void `visible_cells` (int &r1, int &r2, int &c1, int &c2)

- Returns the range of row and column numbers for all visible and partially visible cells in the table.
- void **when** (FI_When flags)

The *FI_Widget::when()* function is used to set a group of flags, determining when the widget callback is called:
- **~FI_Table** ()

The destructor for the *FI_Table*.

Public Member Functions inherited from **FI_Group**

- **FI_Widget** *& **_ddfdesign_kludge** ()

This is for forms compatibility only.
- void **add** (FI_Widget &)

The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (FI_Widget *o)

See void *FI_Group::add(FI_Widget &w)*
- void **add_resizable** (FI_Widget &o)

Adds a widget to the group and makes it the resizable widget.
- **FI_Widget** *const * **array** () const

Returns a pointer to the array of children.
- virtual **FI_Group** * **as_group** ()

Returns an *FI_Group* pointer if this widget is an *FI_Group*.
- void **begin** ()

Sets the current group so you can build the widget tree by just constructing the widgets.
- **FI_Widget** * **child** (int n) const

Returns *array()[n]*.
- int **children** () const

Returns how many child widgets the group has.
- void **clear** ()

Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()

Returns the current clipping mode.
- void **clip_children** (int c)

Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void **end** ()

Exactly the same as *current(this->parent())*.
- int **find** (const FI_Widget &o) const

See int *FI_Group::find(const FI_Widget *w) const*.
- int **find** (const FI_Widget *) const

Searches the child array for the widget and returns the index.
- **FI_Group** (int, int, int, const char *s)

Creates a new *FI_Group* widget using the given position, size, and label string.
- void **focus** (FI_Widget *W)
- void **forms_end** ()

This is for forms compatibility only.
- void **init_sizes** ()

Resets the internal array of widget sizes and positions.
- void **insert** (FI_Widget &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (FI_Widget &o, FI_Widget *before)

This does *insert(w, find(before))*.
- void **remove** (FI_Widget &)

Removes a widget from the group but does not delete it.

- void `remove` (`FI_Widget *o`)
Removes the widget `o` from the group.
- void `remove` (`int index`)
Removes the widget at `index` from the group but does not delete it.
- `FI_Widget *resizable` () const
*See void `FI_Group::resizable(FI_Widget *box)`*
- void `resizable` (`FI_Widget &o`)
*See void `FI_Group::resizable(FI_Widget *box)`*
- void `resizable` (`FI_Widget *o`)
The resizable widget defines the resizing box for the group.
- virtual `~FI_Group` ()
The destructor also deletes all the children.

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
Activates the widget.
- unsigned int `active` () const
Returns whether the widget is active.
- int `active_r` () const
Returns whether the widget and all of its parents are active.
- `FI_Align align` () const
Gets the label alignment.
- void `align` (`FI_Align alignment`)
Sets the label alignment.
- long `argument` () const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (`long v`)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_GI_Window *as_gi_window` ()
Returns an `FI_GI_Window` pointer if this widget is an `FI_GI_Window`.
- virtual `FI_Window *as_window` ()
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype box` () const
Gets the box type of the widget.
- void `box` (`FI_Boxtype new_box`)
Sets the box type for the widget.
- `FI_Callback_p callback` () const
Gets the current callback function for the widget.
- void `callback` (`FI_Callback *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback *cb, void *p`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0 *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1 *cb, long p=0`)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.

- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FL_Color` bg)
Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `deimage` () const
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, void *arg=0)
Calls the widget callback.

- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label.
- const `FI_Image` * `image` () const
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.

- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const

- Returns whether a widget and all its parents are visible.*

 - int **w** () const
 - Gets the widget width.*
 - **FI_When** when () const
 - Returns the conditions under which the callback is called.*
 - void **when** (uchar i)
 - Sets the flags used to decide when a callback is called.*
 - **FI_Window** * **window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
 - int **x** () const
 - Gets the widget position in its window.*
 - int **y** () const
 - Gets the widget position in its window.*
 - virtual **~FI_Widget** ()
 - Destroys the widget.*

Protected Types

- enum **ResizeFlag** {
 - RESIZE_NONE** = 0 , **RESIZE_COL_LEFT** = 1 , **RESIZE_COL_RIGHT** = 2 , **RESIZE_ROW_ABOVE** = 3 ,
 - RESIZE_ROW_BELOW** = 4 }

Protected Types inherited from **FI_Widget**

- enum {
 - INACTIVE** = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,

- void **table_resized** ()
- void **table_scrolled** ()

Protected Member Functions inherited from [FI_Group](#)

- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Static Protected Member Functions

- int **wiw**
- int **wix**
- int **wiy**

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * **current** ()
Returns the currently active group.
- static void **current** ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

9.131.1 Detailed Description

A table of widgets or other content.

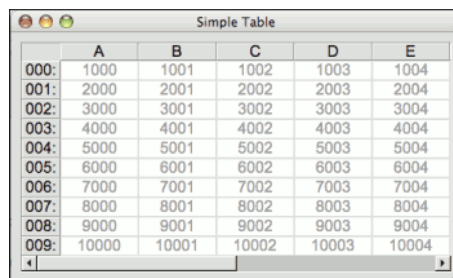

This is the base class for table widgets.

To be useful it must be subclassed and several virtual functions defined. Normally applications use widgets derived from this widget, and do not use this widget directly; this widget is usually too low level to be used directly by applications.

This widget does *not* handle the data in the table. The `draw_cell()` method must be overridden by a subclass to manage drawing the contents of the cells.

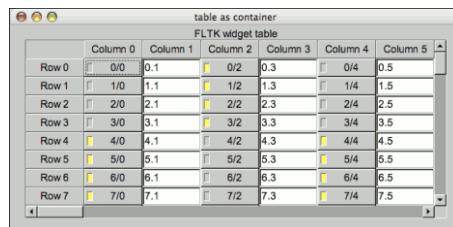

This widget can be used in several ways:

- As a custom widget; see `examples/table-simple.cxx` and `test/table.cxx`. Very optimal for even extremely large tables.
- As a table made up of a single FLTK widget instanced all over the table, simulating a numeric spreadsheet. See `examples/table-spreadsheet.cxx` and `examples/table-spreadsheet-with-keyboard-nav.cxx`. Optimal for large tables.
- As a regular container of FLTK widgets, one widget per cell. See `examples/table-as-container.cxx`. *Not* recommended for large tables.

	A	B	C	D	E
000:	1000	1001	1002	1003	1004
001:	2000	2001	2002	2003	2004

Figure 9.34 table-simple example

	Column 0	Column 1	Column 2	Column 3	Column 4	Column 5
Row 0	0/0	0.1	0/2	0.3	0/4	0.5
Row 1	1/0	1.1	1/2	1.3	1/4	1.5
Row 2	2/0	2.1	2/2	2.3	2/4	2.5
Row 3	3/0	3.1	3/2	3.3	3/4	3.5
Row 4	4/0	4.1	4/2	4.3	4/4	4.5
Row 5	5/0	5.1	5/2	5.3	5/4	5.5
Row 6	6/0	6.1	6/2	6.3	6/4	6.5
Row 7	7/0	7.1	7/2	7.3	7/4	7.5

Figure 9.35 table-as-container example

When acting as part of a custom widget, events on the cells and/or headings generate callbacks when they are clicked by the user. You control when events are generated based on the setting for `FI_Table::when()`.

When acting as a container for FLTK widgets, the FLTK widgets maintain themselves. Although the `draw_cell()` method must be overridden, its contents can be very simple. See the `draw_cell()` code in `examples/table-simple.cxx`.

The following variables are available to classes deriving from `FI_Table`:

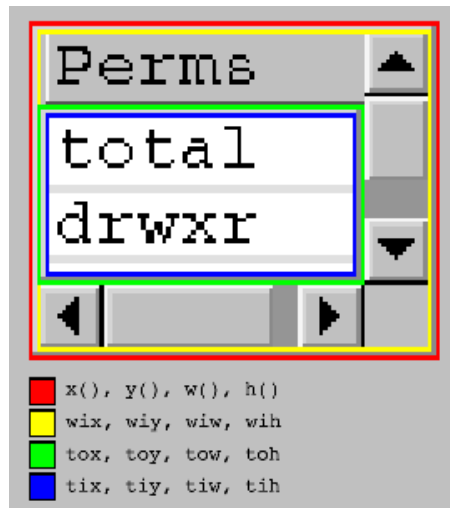

Figure 9.36 Fl_Table Dimensions

x()/y()/w()/h()	Fl_Table widget's outer dimension. The outer edge of the border of the Fl_Table. (Red in the diagram above)
wix/wiy/wiw/wih	Fl_Table widget's inner dimension. The inner edge of the border of the Fl_Table. eg. if the Fl_Table's box() is FL_NO_BOX, these values are the same as x()/y()/w()/h(). (Yellow in the diagram above)
tox/toy/tow/toh	The table's outer dimension. The outer edge of the border around the cells, but inside the row/col headings and scrollbars. (Green in the diagram above)
tix/tiy/tiw/tih	The table's inner dimension. The inner edge of the border around the cells, but inside the row/col headings and scrollbars. AKA the table's clip region. eg. if the table_box() is FL_↔_NO_BOX, these values are the same as tox/toy/tow/toh. (Blue in the diagram above)

CORE DEVELOPERS

- Greg Ercolano : 12/16/2002 - initial implementation 12/16/02. [Fl_Table](#), [Fl_Table_Row](#), docs.
- Jean-Marc Lienher : 02/22/2004 - added keyboard nav + mouse selection, and ported [Fl_Table](#) into fltk-utf8-1.1.4

OTHER CONTRIBUTORS

- Inspired by the Feb 2000 version of FLVW's Flvw_Table widget. Mucho thanks to those folks.
- Mister Satan : 04/07/2003 - MinGW porting mods, and singleinput.cxx; a cool [Fl_Input](#) oriented spreadsheet example
- Marek Paliwoda : 01/08/2003 - Porting mods for Borland
- Ori Berger : 03/16/2006 - Optimizations for >500k rows/cols

LICENSE

Greg added the following license to the original distribution of [Fl_Table](#). He kindly gave his permission to integrate [Fl_Table](#) and [Fl_Table_Row](#) into FLTK, allowing FLTK license to apply while his widgets are part of the library. If used on its own, this is the license that applies:

```
Fl_Table License
December 16, 2002
```

```
The Fl_Table library and included programs are provided under the terms
of the GNU Library General Public License (LGPL) with the following
exceptions:
```

1. Modifications to the Fl_Table configure script, config header file, and makefiles by themselves to support a specific platform do not constitute a modified or derivative work.

The authors do request that such modifications be contributed to the Fl_Table project - send all contributions to "erco at seriss dot com".

2. Widgets that are subclassed from Fl_Table widgets do not constitute a derivative work.

3. Static linking of applications and widgets to the Fl_Table library does not constitute a derivative work and does not require the author to provide source code for the application or widget, use the shared Fl_Table libraries, or link their applications or widgets against a user-supplied version of Fl_Table.

If you link the application or widget to a modified version of Fl_Table, then the changes to Fl_Table must be provided under the terms of the LGPL in sections 1, 2, and 4.

4. You do not have to provide a copy of the Fl_Table license with programs that are linked to the Fl_Table library, nor do you have to identify the Fl_Table license in your program or documentation as required by section 6 of the LGPL.

However, programs must still identify their use of Fl_Table. The following example statement can be included in user documentation to satisfy this requirement:

```
[program/widget] is based in part on the work of
the Fl_Table project http://seriss.com/people/erco/fttk/Fl\_Table/
```

9.131.2 Member Enumeration Documentation

9.131.2.1 TableContext

```
enum Fl_Table::TableContext
```

The context bit flags for Fl_Table related callbacks.

Used in [draw_cell\(\)](#), [callback\(\)](#), etc.

Enumerator

CONTEXT_NONE	no known context
CONTEXT_STARTPAGE	before a page is redrawn
CONTEXT_ENDPAGE	after a page is redrawn
CONTEXT_ROW_HEADER	in the row header
CONTEXT_COL_HEADER	in the col header
CONTEXT_CELL	in one of the cells
CONTEXT_TABLE	in a dead zone of table
CONTEXT_RC_RESIZE	column or row being resized

9.131.3 Constructor & Destructor Documentation

9.131.3.1 Fl_Table()

```
Fl_Table::Fl_Table (
    int X,
    int Y,
```

```

    int W,
    int H,
    const char * I = 0 )

```

The constructor for the [Fl_Table](#).

This creates an empty table with no rows or columns, with headers and row/column resize behavior disabled.

9.131.3.2 ~Fl_Table()

```
Fl_Table::~Fl_Table ( )
```

The destructor for the [Fl_Table](#).

Destroys the table and its associated widgets.

9.131.4 Member Function Documentation

9.131.4.1 callback()

```

void Fl_Table::callback (
    Fl_Widget * ,
    void * )

```

Callbacks will be called depending on the setting of [Fl_Widget::when\(\)](#).

Callback functions should use the following functions to determine the context/row/column:

- [Fl_Table::callback_row\(\)](#) returns current row
- [Fl_Table::callback_col\(\)](#) returns current column
- [Fl_Table::callback_context\(\)](#) returns current table context

[callback_row\(\)](#) and [callback_col\(\)](#) will be set to the row and column number the event occurred on. If someone clicked on a row header, `col` will be 0.

If someone clicked on a column header, `row` will be 0.

[callback_context\(\)](#) will return one of the following:

Fl_Table::CONTEXT_ROW_HEADER	Someone clicked on a row header. Excludes resizing.
Fl_Table::CONTEXT_COL_HEADER	Someone clicked on a column header. Excludes resizing.
Fl_Table::CONTEXT_CELL	Someone clicked on a cell. To receive callbacks for FL_RELEASE events, you must set <code>when(FL_WHEN_RELEASE)</code> .
Fl_Table::CONTEXT_RC_RESIZE	Someone is resizing rows/columns either interactively, or via the col_width() or row_height() API. Use is_interactive_resize() to determine interactive resizing. If resizing a column, R=0 and C=column being resized. If resizing a row, C=0 and R=row being resized. NOTE: To receive resize events, you must set <code>when(FL_WHEN_CHANGED)</code> .

```

class MyTable : public Fl_Table {
    [...]
private:
    // Handle events that happen on the table
    void event_callback2() {
        int R = callback_row(),           // row where event occurred
            C = callback_col();           // column where event occurred
        TableContext context = callback_context(); // which part of table
        fprintf(stderr, "callback: Row=%d Col=%d Context=%d Event=%d\n",
            R, C, (int)context, (int)Fl::event());
    }

    // Actual static callback
    static void event_callback(Fl_Widget*, void* data) {
        MyTable *o = (MyTable*)data;
        o->event_callback2();
    }

public:
    // Constructor

```

```

MyTable() {
    [...]
    table.callback(&event_callback, (void*)this); // setup callback
    table.when(FL_WHEN_CHANGED|FL_WHEN_RELEASE); // when to call it
}
};

```

9.131.4.2 callback_col()

```
int Fl_Table::callback_col ( ) [inline]
```

Returns the current column the event occurred on.

This function should only be used from within the user's callback function.

9.131.4.3 callback_context()

```
TableContext Fl_Table::callback_context ( ) [inline]
```

Returns the current 'table context'.

This function should only be used from within the user's callback function.

9.131.4.4 callback_row()

```
int Fl_Table::callback_row ( ) [inline]
```

Returns the current row the event occurred on.

This function should only be used from within the user's callback function.

9.131.4.5 child()

```
Fl_Widget * Fl_Table::child (
    int n ) const [inline]
```

Returns the child widget by an index.

When using the [Fl_Table](#) as a container for FLTK widgets, this method returns the widget pointer from the internal array of widgets in the container.

Typically used in loops, eg:

```

for ( int i=0; i<children(); i++ ) {
    Fl_Widget *w = child(i);
    [...]
}

```

9.131.4.6 children()

```
int Fl_Table::children ( ) const [inline]
```

Returns the number of children in the table.

When using the [Fl_Table](#) as a container for FLTK widgets, this method returns how many child widgets the table has.

See also

[child\(int\)](#)

9.131.4.7 clear()

```
virtual void Fl_Table::clear ( ) [inline], [virtual]
```

Clears the table to zero rows ([rows\(0\)](#)), zero columns ([cols\(0\)](#)), and clears any widgets ([table->clear\(\)](#)) that were added with [begin\(\)/end\(\)](#) or [add\(\)/insert\(\)/etc.](#)

See also

[rows\(int\)](#), [cols\(int\)](#)

Reimplemented in [Fl_Table_Row](#).

9.131.4.8 col_header()

```
void Fl_Table::col_header (
    int flag ) [inline]
```

Enable or disable column headers.
If changed, the table is redrawn.

9.131.4.9 col_resize()

```
void Fl_Table::col_resize (
    int flag ) [inline]
```

Allows/disallows column resizing by the user.

1=allow interactive resizing, 0=disallow interactive resizing. Since interactive resizing is done via the column headers, [col_header\(\)](#) must also be enabled to allow resizing.

9.131.4.10 col_resize_min()

```
void Fl_Table::col_resize_min (
    int val ) [inline]
```

Sets the current column minimum resize value.

This is used to prevent the user from interactively resizing any column to be smaller than 'pixels'. Must be a value ≥ 1 .

9.131.4.11 col_width()

```
void Fl_Table::col_width (
    int col,
    int width )
```

Sets the width of the specified column in pixels, and the table is redrawn.

[callback\(\)](#) will be invoked with CONTEXT_RC_RESIZE if the column's width was actually changed, and [when\(\)](#) is FL_WHEN_CHANGED.

9.131.4.12 col_width_all()

```
void Fl_Table::col_width_all (
    int width ) [inline]
```

Convenience method to set the width of all columns to the same value, in pixels.

The screen is redrawn.

9.131.4.13 draw()

```
void Fl_Table::draw (
    void ) [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll; // scroll is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

9.131.4.14 draw_cell()

```
virtual void Fl_Table::draw_cell (
    TableContext context,
    int R = 0,
    int C = 0,
    int X = 0,
```

```

int Y = 0,
int W = 0,
int H = 0 ) [inline], [protected], [virtual]

```

Subclass should override this method to handle drawing the cells.

This method will be called whenever the table is redrawn, once per cell.

Only cells that are completely (or partially) visible will be told to draw.

context will be one of the following:

Fl_Table::CONTEXT_STARTPAGE	When table, or parts of the table, are about to be redrawn. Use to initialize static data, such as font selections. R/C will be zero, X/Y/W/H will be the dimensions of the table's entire data area. (Useful for locking a database before accessing; see also visible_cells())
Fl_Table::CONTEXT_ENDPAGE	When table has completed being redrawn. R/C will be zero, X/Y/W/H dimensions of table's data area. (Useful for unlocking a database after accessing)
Fl_Table::CONTEXT_ROW_HEADER	Whenever a row header cell needs to be drawn. R will be the row number of the header being redrawn, C will be zero, X/Y/W/H will be the fltk drawing area of the row header in the window
Fl_Table::CONTEXT_COL_HEADER	Whenever a column header cell needs to be drawn. R will be zero, C will be the column number of the header being redrawn, X/Y/W/H will be the fltk drawing area of the column header in the window
Fl_Table::CONTEXT_CELL	Whenever a data cell in the table needs to be drawn. R/C will be the row/column of the cell to be drawn, X/Y/W/H will be the fltk drawing area of the cell in the window
Fl_Table::CONTEXT_RC_RESIZE	Whenever table or row/column is resized or scrolled, either interactively or via col_width() or row_height() . R/C/X/Y/W/H will all be zero. Useful for fltk containers that need to resize or move the child fltk widgets.

row and col will be set to the row and column number of the cell being drawn. In the case of row headers, col will be 0. In the case of column headers, row will be 0.

x/y/w/h will be the position and dimensions of where the cell should be drawn.

In the case of custom widgets, a minimal [draw_cell\(\)](#) override might look like the following. With custom widgets it is up to the caller to handle drawing everything within the dimensions of the cell, including handling the selection color. Note all clipping must be handled as well; this allows drawing outside the dimensions of the cell if so desired for 'custom effects'.

```

// This is called whenever Fl_Table wants you to draw a cell
void MyTable::draw_cell(TableContext context, int R=0, int C=0, int X=0, int Y=0, int W=0, int H=0) {
    static char s[40];
    sprintf(s, "%d/%d", R, C); // text for each cell
    switch ( context ) {
        case CONTEXT_STARTPAGE: // Fl_Table telling us it's starting to draw page
            fl_font(FL_HELVETICA, 16);
            return;

        case CONTEXT_ROW_HEADER: // Fl_Table telling us to draw row/col headers
        case CONTEXT_COL_HEADER:
            fl_push_clip(X, Y, W, H);
            {
                fl_draw_box(FL_THIN_UP_BOX, X, Y, W, H, color());
                fl_color(FL_BLACK);
                fl_draw(s, X, Y, W, H, FL_ALIGN_CENTER);
            }
            fl_pop_clip();
            return;

        case CONTEXT_CELL: // Fl_Table telling us to draw cells
            fl_push_clip(X, Y, W, H);

```

```

    {
        // BG COLOR
        fl_color( row_selected(R) ? selection_color() : FL_WHITE);
        fl_rectf(X, Y, W, H);

        // TEXT
        fl_color(FL_BLACK);
        fl_draw(s, X, Y, W, H, FL_ALIGN_CENTER);

        // BORDER
        fl_color(FL_LIGHT2);
        fl_rect(X, Y, W, H);
    }
    fl_pop_clip();
    return;

default:
    return;
}
//NOTREACHED
}

```

9.131.4.15 get_selection()

```

void Fl_Table::get_selection (
    int & row_top,
    int & col_left,
    int & row_bot,
    int & col_right )

```

Gets the region of cells selected (highlighted).

Parameters

in	<i>row_top</i>	Returns the top row of selection area
in	<i>col_left</i>	Returns the left column of selection area
in	<i>row_bot</i>	Returns the bottom row of selection area
in	<i>col_right</i>	Returns the right column of selection area

9.131.4.16 handle()

```

int Fl_Table::handle (
    int event ) [protected], [virtual]

```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Table_Row](#).

9.131.4.17 `is_interactive_resize()`

```
int Fl_Table::is_interactive_resize ( ) [inline]
```

Returns 1 if someone is interactively resizing a row or column.
You can currently call this only from within your [callback\(\)](#).

9.131.4.18 `is_selected()`

```
int Fl_Table::is_selected (
    int r,
    int c )
```

See if the cell at row `r` and column `c` is selected.

Returns

1 if the cell is selected, 0 if not.

9.131.4.19 `resize()`

```
void Fl_Table::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Changes the size of the [Fl_Table](#), causing it to redraw.
Reimplemented from [Fl_Group](#).

9.131.4.20 `row_header()`

```
void Fl_Table::row_header (
    int flag ) [inline]
```

Enables/disables showing the row headers.
1=enabled, 0=disabled. If changed, the table is redrawn.

9.131.4.21 `row_height()`

```
void Fl_Table::row_height (
    int row,
    int height )
```

Sets the height of the specified row in pixels, and the table is redrawn.
[callback\(\)](#) will be invoked with `CONTEXT_RC_RESIZE` if the row's height was actually changed, and [when\(\)](#) is `FL_WHEN_CHANGED`.

9.131.4.22 `row_height_all()`

```
void Fl_Table::row_height_all (
    int height ) [inline]
```

Convenience method to set the height of all rows to the same value, in pixels.
The screen is redrawn.

9.131.4.23 `row_resize()`

```
void Fl_Table::row_resize (
    int flag ) [inline]
```

Allows/disallows row resizing by the user.
1=allow interactive resizing, 0=disallow interactive resizing. Since interactive resizing is done via the row headers, [row_header\(\)](#) must also be enabled to allow resizing.

9.131.4.24 row_resize_min()

```
void Fl_Table::row_resize_min (
    int val ) [inline]
```

Sets the current row minimum resize value.

This is used to prevent the user from interactively resizing any row to be smaller than 'pixels'. Must be a value ≥ 1 .

9.131.4.25 rows()

```
void Fl_Table::rows (
    int val ) [virtual]
```

Sets the number of rows in the table, and the table is redrawn.

Reimplemented in [Fl_Table_Row](#).

9.131.4.26 scrollbar_size() [1/2]

```
int Fl_Table::scrollbar_size ( ) const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

9.131.4.27 scrollbar_size() [2/2]

```
void Fl_Table::scrollbar_size (
    int newSize ) [inline]
```

Sets the pixel size of the scrollbars' troughs to *newSize*, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting *newSize* to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

in	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
----	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

9.131.4.28 set_selection()

```
void Fl_Table::set_selection (
    int row_top,
    int col_left,
    int row_bot,
    int col_right )
```

Sets the region of cells to be selected (highlighted).

So for instance, `set_selection(0,0,0,0)` selects the top/left cell in the table. And `set_selection(0,0,1,1)` selects the four cells in rows 0 and 1, column 0 and 1.

Parameters

in	<i>row_top</i>	Top row of selection area
in	<i>col_left</i>	Left column of selection area
in	<i>row_bot</i>	Bottom row of selection area
in	<i>col_right</i>	Right column of selection area

9.131.4.29 `tab_cell_nav()` [1/2]

```
int Fl_Table::tab_cell_nav ( ) const [inline]
```

Get state of table's 'Tab' key cell navigation flag.

Returns

- 1 if Tab configured to navigate cells in table
- 0 to navigate widget focus (default)

See also

[tab_cell_nav\(int\)](#)

9.131.4.30 `tab_cell_nav()` [2/2]

```
void Fl_Table::tab_cell_nav (
    int val ) [inline]
```

Flag to control if Tab navigates table cells or not.

If on, Tab key navigates table cells. If off, Tab key navigates fltk widget focus. (default)

As of fltk 1.3, the default behavior of the Tab key is to navigate focus off of the current widget, and on to the next one. But in some applications, it's useful for Tab to be used to navigate cells in the [Fl_Table](#).

Parameters

in	<i>val</i>	If <i>val</i> is 1, Tab key navigates cells in table, not fltk widgets. If <i>val</i> is 0, Tab key will advance focus to the next fltk widget (default), and does not navigate cells in table.
----	------------	--

9.131.4.31 `table_box()`

```
void Fl_Table::table_box (
    Fl_Boxtype val ) [inline]
```

Sets the kind of box drawn around the data table, the default being `FL_NO_BOX`.

Changing this value will cause the table to redraw.

9.131.4.32 `top_row()` [1/2]

```
int Fl_Table::top_row ( ) [inline]
```

Returns the current top row shown in the table.

This row may be partially obscured.

9.131.4.33 `top_row()` [2/2]

```
void Fl_Table::top_row (
    int row ) [inline]
```

Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn. If the table cannot be scrolled that far, it is scrolled as far as possible.

9.131.4.34 visible_cells()

```
void Fl_Table::visible_cells (
    int & r1,
    int & r2,
    int & c1,
    int & c2 ) [inline]
```

Returns the range of row and column numbers for all visible and partially visible cells in the table.

These values can be used e.g. by your [draw_cell\(\)](#) routine during CONTEXT_STARTPAGE to figure out what cells are about to be redrawn for the purposes of locking the data from a database before it's drawn.

```

      leftcol          rightcol
      :              :
toprow .. .-----:
      |              |
      |  V I S I B L E  |
      |              |
      |  T A B L E     |
      |              |
botrow .. '-----'
```

e.g. in a table where the visible rows are 5-20, and the visible columns are 100-120, then those variables would be:

- toprow = 5
- botrow = 20
- leftcol = 100
- rightcol = 120

9.131.4.35 when()

```
void Fl_Table::when (
    Fl_When flags )
```

The [Fl_Widget::when\(\)](#) function is used to set a group of flags, determining when the widget callback is called:

FL_WHEN_CHANGED	callback() will be called when rows or columns are resized (interactively or via col_width() or row_height()), passing CONTEXT_RC_RESIZE via callback_context() .
FL_WHEN_RELEASE	callback() will be called during FL_RELEASE events, such as when someone releases a mouse button somewhere on the table.

The [callback\(\)](#) routine is sent a TableContext that indicates the context the event occurred in, such as in a cell, in a header, or elsewhere on the table. When an event occurs in a cell or header, [callback_row\(\)](#) and [callback_col\(\)](#) can be used to determine the row and column. The callback can also look at the regular fltk event values (ie. [Fl::event\(\)](#) and [Fl::event_button\(\)](#)) to determine what kind of event is occurring.

The documentation for this class was generated from the following files:

- Fl_Table.H
- Fl_Table.cxx

9.132 Fl_Table_Row Class Reference

A table with row selection capabilities.

```
#include <Fl_Table_Row.H>
```

Inheritance diagram for Fl_Table_Row:

Public Types

- enum `TableRowSelectMode` { `SELECT_NONE` , `SELECT_SINGLE` , `SELECT_MULT` }

Public Types inherited from `Fl_Table`

- enum `TableContext` {
`CONTEXT_NONE` = 0 , `CONTEXT_STARTPAGE` = 0x01 , `CONTEXT_ENDPAGE` = 0x02 , `CONTEXT_ROW_HEADER`
= 0x04 ,
`CONTEXT_COL_HEADER` = 0x08 , `CONTEXT_CELL` = 0x10 , `CONTEXT_TABLE` = 0x20 , `CONTEXT_RC_RESIZE`
= 0x40 }

The context bit flags for `Fl_Table` related callbacks.

Public Member Functions

- void `clear` ()
Clears the table to zero rows (`rows(0)`), zero columns (`cols(0)`), and clears any widgets (`table->clear()`) that were added with `begin()/end()` or `add()/insert()/etc.`
- `Fl_Table_Row` (int X, int Y, int W, int H, const char *l=0)
The constructor for the `Fl_Table_Row`.
- int `row_selected` (int row)
Checks to see if 'row' is selected.
- int `rows` ()
- void `rows` (int val)
Sets the number of rows in the table, and the table is redrawn.
- void `select_all_rows` (int flag=1)
This convenience function changes the selection state for all rows based on 'flag'.
- int `select_row` (int row, int flag=1)
Changes the selection state for 'row', depending on the value of 'flag'.
- TableRowSelectMode `type` () const
- void `type` (TableRowSelectMode val)
Sets the table selection mode.
- `~Fl_Table_Row` ()
The destructor for the `Fl_Table_Row`.

Public Member Functions inherited from `Fl_Table`

- void `add` (`Fl_Widget` &wgt)
- void `add` (`Fl_Widget` *wgt)
- `Fl_Widget` *const * `array` ()
- void `begin` ()
- void `callback` (`Fl_Widget` *, void *)
Callbacks will be called depending on the setting of `Fl_Widget::when()`.
- int `callback_col` ()

- Returns the current column the event occurred on.*

 - `TableContext` `callback_context` ()

Returns the current 'table context'.
- int `callback_row` ()

Returns the current row the event occurred on.
- `Fl_Widget` * `child` (int n) const

Returns the child widget by an index.
- int `children` () const

Returns the number of children in the table.
- int `col_header` ()

Returns if column headers are enabled or not.
- void `col_header` (int flag)

Enable or disable column headers.
- `Fl_Color` `col_header_color` ()

Gets the color for column headers.
- void `col_header_color` (`Fl_Color` val)

Sets the color for column headers and redraws the table.
- int `col_header_height` ()

Gets the column header height.
- void `col_header_height` (int height)

Sets the height in pixels for column headers and redraws the table.
- int `col_position` ()

Returns the current column scroll position as a column number.
- void `col_position` (int col)

Sets the column scroll position to column 'col', and causes the screen to redraw.
- int `col_resize` ()

Returns if column resizing by the user is allowed.
- void `col_resize` (int flag)

Allows/disallows column resizing by the user.
- int `col_resize_min` ()

Returns the current column minimum resize value.
- void `col_resize_min` (int val)

Sets the current column minimum resize value.
- int `col_width` (int col)

Returns the current width of the specified column in pixels.
- void `col_width` (int col, int width)

Sets the width of the specified column in pixels, and the table is redrawn.
- void `col_width_all` (int width)

Convenience method to set the width of all columns to the same value, in pixels.
- int `cols` ()

Get the number of columns in the table.
- virtual void `cols` (int val)

Set the number of columns in the table and redraw.
- void `do_callback` (`TableContext` context, int row, int col)
- void `draw` (void)

Draws the widget.
- void `end` ()
- int `find` (const `Fl_Widget` &wgt) const
- int `find` (const `Fl_Widget` *wgt) const
- `Fl_Table` (int X, int Y, int W, int H, const char *l=0)

The constructor for the `Fl_Table`.

- void `get_selection` (int &row_top, int &col_left, int &row_bot, int &col_right)
Gets the region of cells selected (highlighted).
- void `init_sizes` ()
- void `insert` (FI_Widget &wgt, FI_Widget *w2)
- void `insert` (FI_Widget &wgt, int n)
- int `is_interactive_resize` ()
Returns 1 if someone is interactively resizing a row or column.
- int `is_selected` (int r, int c)
See if the cell at row r and column c is selected.
- int `move_cursor` (int R, int C)
- int `move_cursor` (int R, int C, int shiftselect)
- void `remove` (FI_Widget &wgt)
- void `resize` (int X, int Y, int W, int H)
Changes the size of the [FI_Table](#), causing it to redraw.
- int `row_header` ()
Returns if row headers are enabled or not.
- void `row_header` (int flag)
Enables/disables showing the row headers.
- [FI_Color](#) `row_header_color` ()
Returns the current row header color.
- void `row_header_color` ([FI_Color](#) val)
Sets the row header color and causes the screen to redraw.
- int `row_header_width` ()
Returns the current row header width (in pixels).
- void `row_header_width` (int width)
Sets the row header width to n and causes the screen to redraw.
- int `row_height` (int row)
Returns the current height of the specified row as a value in pixels.
- void `row_height` (int row, int height)
Sets the height of the specified row in pixels, and the table is redrawn.
- void `row_height_all` (int height)
Convenience method to set the height of all rows to the same value, in pixels.
- int `row_position` ()
Returns the current row scroll position as a row number.
- void `row_position` (int row)
Sets the row scroll position to 'row', and causes the screen to redraw.
- int `row_resize` ()
Returns if row resizing by the user is allowed.
- void `row_resize` (int flag)
Allows/disallows row resizing by the user.
- int `row_resize_min` ()
Returns the current row minimum resize value.
- void `row_resize_min` (int val)
Sets the current row minimum resize value.
- int `rows` ()
Returns the number of rows in the table.
- int `scrollbar_size` () const
Gets the current size of the scrollbars' troughs, in pixels.
- void `scrollbar_size` (int newSize)
Sets the pixel size of the scrollbars' troughs to $newSize$, in pixels.
- void `set_selection` (int row_top, int col_left, int row_bot, int col_right)

- Sets the region of cells to be selected (highlighted).*
- int `tab_cell_nav` () const
 - Get state of table's 'Tab' key cell navigation flag.*
- void `tab_cell_nav` (int val)
 - Flag to control if Tab navigates table cells or not.*
- void `table_box` (FI_Boxtype val)
 - Sets the kind of box drawn around the data table, the default being FL_NO_BOX.*
- FI_Boxtype `table_box` (void)
 - Returns the current box type used for the data table.*
- int `top_row` ()
 - Returns the current top row shown in the table.*
- void `top_row` (int row)
 - Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn.*
- void `visible_cells` (int &r1, int &r2, int &c1, int &c2)
 - Returns the range of row and column numbers for all visible and partially visible cells in the table.*
- void `when` (FI_When flags)
 - The FI_Widget::when() function is used to set a group of flags, determining when the widget callback is called:*
- `~FI_Table` ()
 - The destructor for the FI_Table.*

Public Member Functions inherited from FI_Group

- FI_Widget *`& _ddfdesign_kludge` ()
 - This is for forms compatibility only.*
- void `add` (FI_Widget &)
 - The widget is removed from its current group (if any) and then added to the end of this group.*
- void `add` (FI_Widget *o)
 - See void FI_Group::add(FI_Widget &w)*
- void `add_resizable` (FI_Widget &o)
 - Adds a widget to the group and makes it the resizable widget.*
- FI_Widget *`const * array` () const
 - Returns a pointer to the array of children.*
- virtual FI_Group *`as_group` ()
 - Returns an FI_Group pointer if this widget is an FI_Group.*
- void `begin` ()
 - Sets the current group so you can build the widget tree by just constructing the widgets.*
- FI_Widget *`child` (int n) const
 - Returns array()[n].*
- int `children` () const
 - Returns how many child widgets the group has.*
- void `clear` ()
 - Deletes all child widgets from memory recursively.*
- unsigned int `clip_children` ()
 - Returns the current clipping mode.*
- void `clip_children` (int c)
 - Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- void `end` ()
 - Exactly the same as current(this->parent()).*
- int `find` (const FI_Widget &o) const
 - See int FI_Group::find(const FI_Widget *w) const.*
- int `find` (const FI_Widget *) const

- Searches the child array for the widget and returns the index.*

 - `FL_Group` (int, int, int, int, const char **l*)

Creates a new `FL_Group` widget using the given position, size, and label string.
- void `focus` (`FL_Widget` **w*)
- void `forms_end` ()
 - This is for forms compatibility only.*
- void `init_sizes` ()
 - Resets the internal array of widget sizes and positions.*
- void `insert` (`FL_Widget` &, int *i*)
 - The widget is removed from its current group (if any) and then inserted into this group.*
- void `insert` (`FL_Widget` &*o*, `FL_Widget` **before*)
 - This does `insert(w, find(before))`.*
- void `remove` (`FL_Widget` &)
 - Removes a widget from the group but does not delete it.*
- void `remove` (`FL_Widget` **o*)
 - Removes the widget *o* from the group.*
- void `remove` (int *index*)
 - Removes the widget at *index* from the group but does not delete it.*
- `FL_Widget` * `resizable` () const
 - See void `FL_Group::resizable(FL_Widget *box)`*
- void `resizable` (`FL_Widget` &*o*)
 - See void `FL_Group::resizable(FL_Widget *box)`*
- void `resizable` (`FL_Widget` **o*)
 - The resizable widget defines the resizing box for the group.*
- virtual `~FL_Group` ()
 - The destructor also deletes all the children.*

Public Member Functions inherited from `FL_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
 - Activates the widget.*
- unsigned int `active` () const
 - Returns whether the widget is active.*
- int `active_r` () const
 - Returns whether the widget and all of its parents are active.*
- `FL_Align` `align` () const
 - Gets the label alignment.*
- void `align` (`FL_Align` *alignment*)
 - Sets the label alignment.*
- long `argument` () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void `argument` (long *v*)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class `FL_Gl_Window` * `as_gl_window` ()
 - Returns an `FL_Gl_Window` pointer if this widget is an `FL_Gl_Window`.*
- virtual `FL_Window` * `as_window` ()
 - Returns an `FL_Window` pointer if this widget is an `FL_Window`.*
- `FL_Boxtype` `box` () const
 - Gets the box type of the widget.*

- void `box` (`FI_Boxtype` new_box)
Sets the box type for the widget.
- `FI_Callback_p` `callback` () const
Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, void *p)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0` *cb)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FI_Color` bg)
Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)
Sets the background and selection color of the widget.
- `FI_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FI_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()

- Deactivates the widget.*

 - `FI_Image * deimage ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * deimage () const`
 - `void deimage (FI_Image &img)`
Sets the image to use as part of the widget label.
 - `void deimage (FI_Image *img)`
Sets the image to use as part of the widget label.
 - `void do_callback ()`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
 - `void do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
 - `void draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - `int h () const`
Gets the widget height.
 - `virtual void hide ()`
Makes a widget invisible.
 - `FI_Image * image ()`
Gets the image that is used as part of the widget label.
 - `const FI_Image * image () const`
 - `void image (FI_Image &img)`
Sets the image to use as part of the widget label.
 - `void image (FI_Image *img)`
Sets the image to use as part of the widget label.
 - `int inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
 - `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
 - `const char * label () const`
Gets the current label text.
 - `void label (const char *text)`
Sets the current label pointer.
 - `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
 - `FI_Color labelcolor () const`
Gets the label color.
 - `void labelcolor (FI_Color c)`
Sets the label color.
 - `FI_Font labelfont () const`
Gets the font to use.
 - `void labelfont (FI_Font f)`
Sets the font to use.
 - `FI_Fontsize labelsize () const`
Gets the font size in pixels.
 - `void labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
 - `FI_Labeltype labeltype () const`
Gets the label type.

- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)

- Sets the widget type.*

 - int **use_accents_menu** ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
 - void * **user_data** () const
 - Gets the user data for this widget.*
 - void **user_data** (void *v)
 - Sets the user data for this widget.*
 - unsigned int **visible** () const
 - Returns whether a widget is visible.*
 - unsigned int **visible_focus** ()
 - Checks whether this widget has a visible focus.*
 - void **visible_focus** (int v)
 - Modifies keyboard focus navigation.*
 - int **visible_r** () const
 - Returns whether a widget and all its parents are visible.*
 - int **w** () const
 - Gets the widget width.*
 - **FI_When when** () const
 - Returns the conditions under which the callback is called.*
 - void **when** (uchar i)
 - Sets the flags used to decide when a callback is called.*
 - **FI_Window * window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
 - int **x** () const
 - Gets the widget position in its window.*
 - int **y** () const
 - Gets the widget position in its window.*
 - virtual **~FI_Widget** ()
 - Destroys the widget.*

Protected Member Functions

- int **find_cell** (**TableContext** context, int R, int C, int &X, int &Y, int &W, int &H)
- int **handle** (int event)
- Handles the specified event.*

Protected Member Functions inherited from **FI_Table**

- void **change_cursor** (**FI_Cursor** newcursor)
- long **col_scroll_position** (int col)
- **TableContext cursor2rowcol** (int &R, int &C, **ResizeFlag** &resizeflag)
- void **damage_zone** (int r1, int c1, int r2, int c2, int r3=0, int c3=0)
- virtual void **draw_cell** (**TableContext** context, int R=0, int C=0, int X=0, int Y=0, int W=0, int H=0)
- Subclass should override this method to handle drawing the cells.*
- int **find_cell** (**TableContext** context, int R, int C, int &X, int &Y, int &W, int &H)
- void **get_bounds** (**TableContext** context, int &X, int &Y, int &W, int &H)
- int **is_ftk_container** ()
- void **recalc_dimensions** ()
- void **redraw_range** (int topRow, int botRow, int leftCol, int rightCol)
- int **row_col_clamp** (**TableContext** context, int &R, int &C)
- long **row_scroll_position** (int row)
- void **table_resized** ()
- void **table_scrolled** ()

Protected Member Functions inherited from FI_Group

- void **draw_child** (FI_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const FI_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FI_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Table](#)

- enum [ResizeFlag](#) {

9.132.1 Detailed Description

A table with row selection capabilities.

This class implements a simple table with the ability to select rows. This widget is similar to an [FI_Browser](#) with columns. Most methods of importance will be found in the [FI_Table](#) widget, such as [FI_Table::rows\(\)](#) and [FI_Table::cols\(\)](#).

To be useful it must be subclassed and at minimum the [draw_cell\(\)](#) method must be overridden to provide the content of the cells. This widget does *not* manage the cell's data content; it is up to the parent class's [draw_cell\(\)](#) method override to provide this.

Events on the cells and/or headings generate callbacks when they are clicked by the user. You control when events are generated based on the values you supply for [FI_Table::when\(\)](#).

9.132.2 Constructor & Destructor Documentation

9.132.2.1 FI_Table_Row()

```
FI_Table_Row::FI_Table_Row (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 ) [inline]
```

The constructor for the [FI_Table_Row](#).

This creates an empty table with no rows or columns, with headers and row/column resize behavior disabled.

9.132.2.2 ~FI_Table_Row()

```
FI_Table_Row::~FI_Table_Row ( ) [inline]
```

The destructor for the [FI_Table_Row](#).

Destroys the table and its associated widgets.

9.132.3 Member Function Documentation

9.132.3.1 clear()

```
void FI_Table_Row::clear ( ) [inline], [virtual]
```

Clears the table to zero rows ([rows\(0\)](#)), zero columns ([cols\(0\)](#)), and clears any widgets ([table->clear\(\)](#)) that were added with [begin\(\)/end\(\)](#) or [add\(\)/insert\(\)/etc.](#)

See also

[rows\(int\)](#), [cols\(int\)](#)

Reimplemented from [FI_Table](#).

9.132.3.2 handle()

```
int Fl_Table_Row::handle (
    int event ) [protected], [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget. When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise. Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Table](#).

9.132.3.3 row_selected()

```
int Fl_Table_Row::row_selected (
    int row )
```

Checks to see if 'row' is selected.

Returns 1 if selected, 0 if not. You can change the selection of a row by clicking on it, or by using `select_row(row, flag)`

9.132.3.4 rows()

```
void Fl_Table_Row::rows (
    int val ) [virtual]
```

Sets the number of rows in the table, and the table is redrawn.

Reimplemented from [Fl_Table](#).

9.132.3.5 select_all_rows()

```
void Fl_Table_Row::select_all_rows (
    int flag = 1 )
```

This convenience function changes the selection state for *all* rows based on 'flag'.

0=deselect, 1=select, 2=toggle existing state.

9.132.3.6 select_row()

```
int Fl_Table_Row::select_row (
    int row,
    int flag = 1 )
```

Changes the selection state for 'row', depending on the value of 'flag'.

0=deselected, 1=select, 2=toggle existing state.

9.132.3.7 type()

```
void Fl_Table_Row::type (
    TableRowSelectMode val )
```

Sets the table selection mode.

- `Fl_Table_Row::SELECT_NONE` - No selection allowed
- `Fl_Table_Row::SELECT_SINGLE` - Only single rows can be selected
- `Fl_Table_Row::SELECT_MULTI` - Multiple rows can be selected

The documentation for this class was generated from the following files:

- `Fl_Table_Row.H`
- `Fl_Table_Row.cxx`

9.133 FI_Tabs Class Reference

The `Fl_Tabs` widget is the "file card tabs" interface that allows you to put lots and lots of buttons and switches in a panel, as popularized by many toolkits.

```
#include <Fl_Tabs.H>
```

Inheritance diagram for `Fl_Tabs`:

Public Member Functions

- `void client_area` (int &rx, int &ry, int &rw, int &rh, int tabh=0)
Returns the position and size available to be used by its children.
- `Fl_Tabs` (int, int, int, int, const char *=0)
Creates a new `Fl_Tabs` widget using the given position, size, and label string.
- `int handle` (int)
Handles the specified event.
- `Fl_Widget * push` () const
Returns the tab group for the tab the user has currently down-clicked on and remains over until `FL_RELEASE`.
- `int push` (`Fl_Widget *`)
This is called by the tab widget's `handle()` method to set the tab group widget the user last `FL_PUSH`'ed on.
- `Fl_Widget * value` ()
Gets the currently visible widget/tab.
- `int value` (`Fl_Widget *`)
Sets the widget to become the current visible widget/tab.
- `Fl_Widget * which` (int event_x, int event_y)
Return the widget of the tab the user clicked on at `event_x`/`event_y`.

Public Member Functions inherited from `Fl_Group`

- `Fl_Widget *& _ddfdesign_kludge` ()
This is for forms compatibility only.
- `void add` (`Fl_Widget &`)
The widget is removed from its current group (if any) and then added to the end of this group.
- `void add` (`Fl_Widget *o`)
See void `Fl_Group::add(Fl_Widget &w)`

- void **add_resizable** (FL_Widget &o)
Adds a widget to the group and makes it the resizable widget.
- FL_Widget *const * **array** () const
Returns a pointer to the array of children.
- virtual FL_Group * **as_group** ()
Returns an FL_Group pointer if this widget is an FL_Group.
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- FL_Widget * **child** (int n) const
Returns array()[n].
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void **end** ()
Exactly the same as current(this->parent()).
- int **find** (const FL_Widget &o) const
*See int FL_Group::find(const FL_Widget *w) const.*
- int **find** (const FL_Widget *) const
Searches the child array for the widget and returns the index.
- FL_Group (int, int, int, int, const char * =0)
Creates a new FL_Group widget using the given position, size, and label string.
- void **focus** (FL_Widget *W)
- void **forms_end** ()
This is for forms compatibility only.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** (FL_Widget &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (FL_Widget &o, FL_Widget *before)
This does insert(w, find(before)).
- void **remove** (FL_Widget &)
Removes a widget from the group but does not delete it.
- void **remove** (FL_Widget *o)
Removes the widget o from the group.
- void **remove** (int index)
Removes the widget at index from the group but does not delete it.
- FL_Widget * **resizable** () const
*See void FL_Group::resizable(FL_Widget *box)*
- void **resizable** (FL_Widget &o)
*See void FL_Group::resizable(FL_Widget *box)*
- void **resizable** (FL_Widget *o)
The resizable widget defines the resizing box for the group.
- void **resize** (int, int, int, int)
Resizes the FL_Group widget and all of its children.
- virtual ~FL_Group ()
The destructor also deletes all the children.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window * as_gl_window** ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual **FI_Window * as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback *cb**)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback *cb**, void *p)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback0 *cb**)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1 *cb**, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (**uchar** c=0)
Clears or sets the damage flags.
- void **clear_output** ()
Sets a widget to accept input.
- void **clear_visible** ()
Hides the widget.
- void **clear_visible_focus** ()
Disables keyboard focus navigation with this widget.
- **FI_Color color** () const

- Gets the background color of the widget.*

 - void `color` (`FI_Color` bg)
- Sets the background color of the widget.*

 - void `color` (`FI_Color` bg, `FI_Color` sel)
- Sets the background and selection color of the widget.*

 - `FI_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const `FI_Widget` *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (`uchar` c)
- Sets the damage bits for the widget.*

 - void `damage` (`uchar` c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FI_Image` * `deimage` ()
- Gets the image that is used as part of the widget label.*

 - const `FI_Image` * `deimage` () const
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FI_Image` &img)
- Sets the image to use as part of the widget label.*

 - void `deimage` (`FI_Image` *img)
- Sets the image to use as part of the widget label.*

 - void `do_callback` ()
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget` *o, long arg)
- Calls the widget callback.*

 - void `do_callback` (`FI_Widget` *o, void *arg=0)
- Calls the widget callback.*

 - void `draw_label` (int, int, int, int, `FI_Align`) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int `h` () const
- Gets the widget height.*

 - virtual void `hide` ()
- Makes a widget invisible.*

 - `FI_Image` * `image` ()
- Gets the image that is used as part of the widget label.*

 - const `FI_Image` * `image` () const
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` &img)
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` *img)
- Sets the image to use as part of the widget label.*

 - void `image` (`FI_Image` *img)

- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()

- Makes the widget visible.*

 - void `set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- virtual void `show ()`
Makes a widget visible.
- void `size (int W, int H)`
Changes the size of the widget.
- int `take_focus ()`
Gives the widget the keyboard focus.
- unsigned int `takeevents () const`
Returns if the widget is able to take events.
- int `test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip () const`
Gets the current tooltip text.
- void `tooltip (const char *text)`
Sets the current tooltip text.
- `FI_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- void `type (uchar t)`
Sets the widget type.
- int `use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data () const`
Gets the user data for this widget.
- void `user_data (void *v)`
Sets the user data for this widget.
- unsigned int `visible () const`
Returns whether a widget is visible.
- unsigned int `visible_focus ()`
Checks whether this widget has a visible focus.
- void `visible_focus (int v)`
Modifies keyboard focus navigation.
- int `visible_r () const`
Returns whether a widget and all its parents are visible.
- int `w () const`
Gets the widget width.
- `FI_When when () const`
Returns the conditions under which the callback is called.
- void `when (uchar i)`
Sets the flags used to decide when a callback is called.
- `FI_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x () const`
Gets the widget position in its window.
- int `y () const`
Gets the widget position in its window.
- virtual `~FI_Widget ()`
Destroys the widget.

Protected Member Functions

- void **draw** ()
Draws the widget.
- void **redraw_tabs** ()

Protected Member Functions inherited from FI_Group

- void **draw_child** (FI_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const FI_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FI_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,

flags possible values enumeration.

9.133.1 Detailed Description

The [FI_Tabs](#) widget is the "file card tabs" interface that allows you to put lots and lots of buttons and switches in a panel, as popularized by many toolkits.

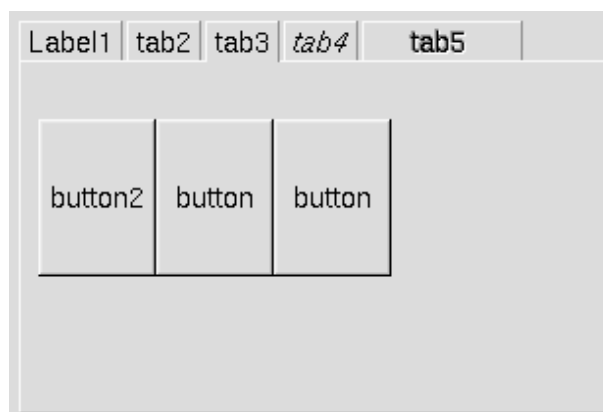

Figure 9.37 [FI_Tabs](#)

Clicking the tab makes a child [visible\(\)](#) by calling [show\(\)](#) on it, and all other children are made invisible by calling [hide\(\)](#) on them. Usually the children are [FI_Group](#) widgets containing several widgets themselves. Each child makes a card, and its [label\(\)](#) is printed on the card tab, including the label font and style. The selection color of that child is used to color the tab, while the color of the child determines the background color of the pane.

The size of the tabs is controlled by the bounding box of the children (there should be some space between the children and the edge of the `Fl_Tabs`), and the tabs may be placed "inverted" on the bottom - this is determined by which gap is larger. It is easiest to lay this out in fluid, using the fluid browser to select each child group and resize them until the tabs look the way you want them to.

The background area behind and to the right of the tabs is "transparent", exposing the background detail of the parent. The value of `Fl_Tabs::box()` does not affect this area. So if `Fl_Tabs` is resized by itself without the parent, force the appropriate parent (visible behind the tabs) to `redraw()` to prevent artifacts.

See "Resizing Caveats" below on how to keep tab heights constant. See "Callback's Use Of `when()`" on how to control the details of how clicks invoke the `callback()`.

A typical use of the `Fl_Tabs` widget:

```
// Typical use of Fl_Tabs
Fl_Tabs *tabs = new Fl_Tabs(10,10,300,200);
{
  Fl_Group *grp1 = new Fl_Group(20,30,280,170,"Tab1");
  {
    ..widgets that go in tab#1..
  }
  grp1->end();
  Fl_Group *grp2 = new Fl_Group(20,30,280,170,"Tab2");
  {
    ..widgets that go in tab#2..
  }
  grp2->end();
}
tabs->end();
```

Default Appearance

The appearance of each "tab" is taken from the `label()` and `color()` of the child group corresponding to that "tab" and panel. Where the "tabs" appear depends on the position and size of the child groups that make up the panels within the `Fl_Tab`, i.e. whether there is more space above or below them. The height of the "tabs" depends on how much free space is available.

Figure 9.38 `Fl_Tabs` Default Appearance

Highlighting The Selected Tab

The selected "tab" can be highlighted further by setting the `selection_color()` of the `Fl_Tab` itself, e.g.

```
..
tabs = new Fl_Tabs(..);
tabs->selection_color(FL_DARK3);
..
```

The result of the above looks like:

Figure 9.39 Highlighting the selected tab

Uniform Tab and Panel Appearance

In order to have uniform tab and panel appearance, not only must the `color()` and `selection_color()` for each child group be set, but also the `selection_color()` of the `Fl_Tab` itself any time a new "tab" is selected. This can be achieved within the `Fl_Tab` callback, e.g.

```

void MyTabCallback(Fl_Widget *w, void*) {
    Fl_Tabs *tabs = (Fl_Tabs*)w;
    // When tab changed, make sure it has same color as its group
    tabs->selection_color( (tab->value()->color() );
}
..
int main(..) {
    // Define tabs widget
    tabs = new Fl_Tabs(..);
    tabs->callback(MyTabCallback);

    // Create three tabs each colored differently
    grp1 = new Fl_Group(.. "One");
    grp1->color(9);
    grp1->selection_color(9);
    grp1->end();

    grp2 = new Fl_Group(.. "Two");
    grp2->color(10);
    grp2->selection_color(10);
    grp2->end();

    grp3 = new Fl_Group(.. "Three");
    grp3->color(14);
    grp3->selection_color(14);
    grp3->end();
    ..
    // Make sure default tab has same color as its group
    tabs->selection_color( (tab->value()->color() );
    ..
    return Fl::run();
}

```

The result of the above looks like:

Figure 9.40 Fl_Tabs with uniform colors

Resizing Caveats

When `Fl_Tabs` is resized vertically, the default behavior scales the tab's height as well as its children. To keep the tab height constant during resizing, set the tab widget's `resizable()` to one of the tab's child groups, i.e.

```

tabs = new Fl_Tabs(..);
grp1 = new Fl_Group(..);
..
grp2 = new Fl_Group(..);
..
tabs->end();
tabs->resizable(grp1);           // keeps tab height constant

```

Callback's Use Of when()

As of FLTK 1.3.3, `Fl_Tabs()` supports the following flags for `when()`:

- `FL_WHEN_NEVER` – callback never invoked (all flags off)
- `FL_WHEN_CHANGED` – if flag set, invokes callback when a tab has been changed (on click or keyboard navigation)
- `FL_WHEN_NOT_CHANGED` – if flag set, invokes callback when the tabs remain unchanged (on click or keyboard navigation)
- `FL_WHEN_RELEASE` – if flag set, invokes callback on RELEASE of mouse button or keyboard navigation

Notes:

1. The above flags can be logically OR-ed (`|`) or added (`+`) to combine behaviors.
2. The default value for `when()` is `FL_WHEN_RELEASE` (inherited from `FI_Widget`).
3. If `FL_WHEN_RELEASE` is the *only* flag specified, the behavior will be as if `(FL_WHEN_RELEASE|FL_WHEN_CHANGED)` was specified.
4. The value of `changed()` will be valid during the callback.
5. If both `FL_WHEN_CHANGED` and `FL_WHEN_NOT_CHANGED` are specified, the callback is invoked whether the tab has been changed or not. The `changed()` method can be used to determine the cause.
6. `FL_WHEN_NOT_CHANGED` can happen if someone clicks on an already selected tab, or if a keyboard navigation attempt results in no change to the tabs, such as using the arrow keys while at the left or right end of the tabs.

9.133.2 Constructor & Destructor Documentation

9.133.2.1 FI_Tabs()

```
Fl_Tabs::Fl_Tabs (
    int X,
    int Y,
    int W,
    int H,
    const char * I = 0 )
```

Creates a new `FI_Tabs` widget using the given position, size, and label string.

The default boxtype is `FL_THIN_UP_BOX`.

Use `add(FI_Widget*)` to add each child, which are usually `FI_Group` widgets. The children should be sized to stay away from the top or bottom edge of the `FI_Tabs` widget, which is where the tabs will be drawn.

All children of `FI_Tabs` should have the same size and exactly fit on top of each other. They should only leave space above or below where the tabs will go, but not on the sides. If the first child of `FI_Tabs` is set to "resizable()", the riders will not resize when the tabs are resized.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the `FI_Tabs` and all of its children can be automatic (local) variables, but you must declare the `FI_Tabs` widget *first* so that it is destroyed last.

9.133.3 Member Function Documentation

9.133.3.1 client_area()

```
void Fl_Tabs::client_area (
    int & rx,
    int & ry,
    int & rw,
    int & rh,
    int tabh = 0 )
```

Returns the position and size available to be used by its children.

If there isn't any child yet the `tabh` parameter will be used to calculate the return values. This assumes that the children's labelsize is the same as the `FI_Tabs`' labelsize and adds a small border.

If there are already children, the values of `child(0)` are returned, and `tabh` is ignored.

Note

Children should always use the same positions and sizes.

`tabh` can be one of

- 0: calculate label size, tabs on top
- -1: calculate label size, tabs on bottom
- > 0: use given `tabh` value, tabs on top (height = `tabh`)
- < -1: use given `tabh` value, tabs on bottom (height = `-tabh`)

Parameters

in	<i>tabh</i>	position and optional height of tabs (see above)
out	<i>rx,ry,rw,rh</i>	(x,y,w,h) of client area for children

Since

FLTK 1.3.0

9.133.3.2 draw()

```
void Fl_Tabs::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                         // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

9.133.3.3 handle()

```
int Fl_Tabs::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

9.133.3.4 push() [1/2]

```
Fl_Widget * Fl_Tabs::push ( ) const [inline]
```

Returns the tab group for the tab the user has currently down-clicked on and remains over until `FL_RELEASE`.

Otherwise, returns `NULL`.

While the user is down-clicked on a tab, the return value is the tab group for that tab. But as soon as the user releases, or drags off the tab with the button still down, the return value will be `NULL`.

See also

[push\(Fl_Widget*\)](#).

9.133.3.5 push() [2/2]

```
int Fl_Tabs::push (
    Fl_Widget * o )
```

This is called by the tab widget's [handle\(\)](#) method to set the tab group widget the user last FL_PUSH'ed on. Set back to zero on FL_RELEASE.

As of this writing, the value is mainly used by [draw_tab\(\)](#) to determine whether or not to draw a 'down' box for the tab when it's clicked, and to turn it off if the user drags off it.

See also

[push\(\)](#).

9.133.3.6 value() [1/2]

```
Fl_Widget * Fl_Tabs::value ( )
```

Gets the currently visible widget/tab.

The [value\(\)](#) is the first visible child (or the last child if none are visible) and this also hides any other children. This allows the tabs to be deleted, moved to other groups, and [show\(\)/hide\(\)](#) called without it screwing up.

9.133.3.7 value() [2/2]

```
int Fl_Tabs::value (
    Fl_Widget * newvalue )
```

Sets the widget to become the current visible widget/tab.

Setting the value hides all other children, and makes this one visible, if it is really a child.

Returns

- 1 if there was a change (new value different from previous),
- 0 if there was no change (new value already set)

9.133.3.8 which()

```
Fl_Widget * Fl_Tabs::which (
    int event_x,
    int event_y )
```

Return the widget of the tab the user clicked on at `event_x / event_y`.

This is used for event handling (clicks) and by fluid to pick tabs.

Returns

- The child widget of the tab the user clicked on, or
- 0 if there are no children or if the event is outside of the tabs area.

The documentation for this class was generated from the following files:

- [Fl_Tabs.H](#)
- [Fl_Tabs.cxx](#)

9.134 Fl_Text_Buffer Class Reference

This class manages Unicode text displayed in one or more [Fl_Text_Display](#) widgets.

```
#include <Fl_Text_Buffer.H>
```

Public Member Functions

- void [add_modify_callback](#) (Fl_Text_Modify_Cb bufModifiedCB, void *cbArg)
Adds a callback function that is called whenever the text buffer is modified.
- void [add_predelete_callback](#) (Fl_Text_Predelete_Cb bufPredeleCB, void *cbArg)

- Adds a callback routine to be called before text is deleted from the buffer.*

 - char * [address](#) (int pos)

Convert a byte offset in buffer into a memory address.
- const char * [address](#) (int pos) const

Convert a byte offset in buffer into a memory address.
- void [append](#) (const char *t)

Appends the text string to the end of the buffer.
- int [appendfile](#) (const char *file, int buflen=128 *1024)

Appends the named file to the end of the buffer.
- char [byte_at](#) (int pos) const

Returns the raw byte at the specified position pos in the buffer.
- void [call_modify_callbacks](#) ()

Calls all modify callbacks that have been registered using the [add_modify_callback\(\)](#) method.
- void [call_predelete_callbacks](#) ()

Calls the stored pre-delete callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.
- void [canUndo](#) (char flag=1)

Lets the undo system know if we can undo changes.
- unsigned int [char_at](#) (int pos) const

Returns the character at the specified position pos in the buffer.
- void [copy](#) (FI_Text_Buffer *fromBuf, int fromStart, int fromEnd, int toPos)

Copies text from another FI_Text_Buffer to this one.
- int [count_displayed_characters](#) (int lineStartPos, int targetPos) const

Count the number of displayed characters between buffer position lineStartPos and targetPos.
- int [count_lines](#) (int startPos, int endPos) const

Counts the number of newlines between startPos and endPos in buffer.
- int [findchar_backward](#) (int startPos, unsigned int searchChar, int *foundPos) const

Search backwards in buffer buf for character searchChar, starting with the character before startPos, returning the result in foundPos.
- int [findchar_forward](#) (int startPos, unsigned searchChar, int *foundPos) const

Finds the next occurrence of the specified character.
- FI_Text_Buffer (int requestedSize=0, int preferredGapSize=1024)

Create an empty text buffer of a pre-determined size.
- int [highlight](#) ()

Returns the highlighted text.
- void [highlight](#) (int start, int end)

Highlights the specified text within the buffer.
- int [highlight_position](#) (int *start, int *end)

Highlights the specified text between start and end within the buffer.
- const FI_Text_Selection * [highlight_selection](#) () const

Returns the current highlight selection.
- char * [highlight_text](#) ()

Returns the highlighted text.
- void [insert](#) (int pos, const char *text)

Inserts null-terminated string text at position pos.
- int [insertfile](#) (const char *file, int pos, int buflen=128 *1024)

Inserts a file at the specified position.
- int [length](#) () const

Returns the number of bytes in the buffer.
- int [line_end](#) (int pos) const

- Finds and returns the position of the end of the line containing position `pos` (which is either a pointer to the newline character ending the line or a pointer to one character beyond the end of the buffer).*
- int `line_start` (int pos) const
Returns the position of the start of the line containing position `pos`.
 - char * `line_text` (int pos) const
Returns the text from the entire line containing the specified character position.
 - int `loadfile` (const char *file, int buflen=128 *1024)
Loads a text file into the buffer.
 - int `next_char` (int ix) const
Returns the index of the next character.
 - int `next_char_clipped` (int ix) const
 - int `outputfile` (const char *file, int start, int end, int buflen=128 *1024)
Writes the specified portions of the text buffer to a file.
 - int `prev_char` (int ix) const
Returns the index of the previous character.
 - int `prev_char_clipped` (int ix) const
 - `FI_Text_Selection * primary_selection` ()
Returns the primary selection.
 - const `FI_Text_Selection * primary_selection` () const
Returns the primary selection.
 - void `remove` (int start, int end)
Deletes a range of characters in the buffer.
 - void `remove_modify_callback` (FI_Text_Modify_Cb bufModifiedCB, void *cbArg)
Removes a modify callback.
 - void `remove_predelete_callback` (FI_Text_Predelete_Cb preDelCB, void *cbArg)
Removes a callback routine `bufPreDeleteCB` associated with argument `cbArg` to be called before text is deleted from the buffer.
 - void `remove_secondary_selection` ()
Removes the text from the buffer corresponding to the secondary text selection object.
 - void `remove_selection` ()
Removes the text in the primary selection.
 - void `replace` (int start, int end, const char *text)
Deletes the characters between `start` and `end`, and inserts the null-terminated string `text` in their place in the buffer.
 - void `replace_secondary_selection` (const char *text)
Replaces the text from the buffer corresponding to the secondary text selection object with the new string `text`.
 - void `replace_selection` (const char *text)
Replaces the text in the primary selection.
 - int `rewind_lines` (int startPos, int nLines)
Finds and returns the position of the first character of the line `nLines` backwards from `startPos` (not counting the character pointed to by `startpos` if that is a newline) in the buffer.
 - int `savefile` (const char *file, int buflen=128 *1024)
Saves a text file from the current buffer.
 - int `search_backward` (int startPos, const char *searchString, int *foundPos, int matchCase=0) const
Search backwards in buffer for string `searchString`, starting with the character at `startPos`, returning the result in `foundPos`.
 - int `search_forward` (int startPos, const char *searchString, int *foundPos, int matchCase=0) const
Search forwards in buffer for string `searchString`, starting with the character `startPos`, and returning the result in `foundPos`.
 - void `secondary_select` (int start, int end)
Selects a range of characters in the secondary selection.
 - int `secondary_selected` ()

- Returns a non-zero value if text has been selected in the secondary text selection, 0 otherwise.*

 - const [FI_Text_Selection](#) * **secondary_selection** () const
Returns the secondary selection.
 - int **secondary_selection_position** (int *start, int *end)
Returns the current selection in the secondary text selection object.
 - char * [secondary_selection_text](#) ()
Returns the text in the secondary selection.
 - void **secondary_unselect** ()
Clears any selection in the secondary text selection object.
 - void **select** (int start, int end)
Selects a range of characters in the buffer.
 - int **selected** () const
Returns a non-zero value if text has been selected, 0 otherwise.
 - int **selection_position** (int *start, int *end)
Gets the selection position.
 - char * [selection_text](#) ()
Returns the currently selected text.
 - int [skip_displayed_characters](#) (int lineStartPos, int nChars)
Count forward from buffer position `startPos` in displayed characters.
 - int **skip_lines** (int startPos, int nLines)
Finds the first character of the line `nLines` forward from `startPos` in the buffer and returns its position.
 - int [tab_distance](#) () const
Gets the tab width.
 - void **tab_distance** (int tabDist)
Set the hardware tab distance (width) used by all displays for this buffer, and used in computing offsets for rectangular selection operations.
 - char * [text](#) () const
Get a copy of the entire contents of the text buffer.
 - void [text](#) (const char *text)
Replaces the entire contents of the text buffer.
 - char * [text_range](#) (int start, int end) const
Get a copy of a part of the text buffer.
 - int **undo** (int *cp=0)
Undo text modification according to the undo variables or insert text from the undo buffer.
 - void **unhighlight** ()
Unhighlights text in the buffer.
 - void **unselect** ()
Cancel any previous selection on the primary text selection object.
 - int **utf8_align** (int) const
Align an index into the buffer to the current or previous UTF-8 boundary.
 - int [word_end](#) (int pos) const
Returns the position corresponding to the end of the word.
 - int [word_start](#) (int pos) const
Returns the position corresponding to the start of the word.
 - ~[FI_Text_Buffer](#) ()
Frees a text buffer.

Public Attributes

- int **input_file_was_transcoded**
true if the loaded file has been transcoded to UTF-8.
- void(* [transcoding_warning_action](#))(FI_Text_Buffer *)
Pointer to a function called after reading a non UTF-8 encoded file.

Static Public Attributes

- static const char * [file_encoding_warning_message](#)
This message may be displayed using the `fl_alert()` function when a file which was not UTF-8 encoded is input.

Protected Member Functions

- void **call_modify_callbacks** (int pos, int nDeleted, int nInserted, int nRestyled, const char *deletedText) const
Calls the stored modify callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.
- void **call_predelete_callbacks** (int pos, int nDeleted) const
Calls the stored pre-delete callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.
- int **insert_** (int pos, const char *text)
Internal (non-redisplaying) version of [insert\(\)](#).
- void **move_gap** (int pos)
Move the gap to start at a new position.
- void **reallocate_with_gap** (int newGapStart, int newGapLen)
Reallocates the text storage in the buffer to have a gap starting at `newGapStart` and a gap size of `newGapLen`, preserving the buffer's current contents.
- void **redisplay_selection** ([FI_Text_Selection](#) *oldSelection, [FI_Text_Selection](#) *newSelection) const
Calls the stored redisplay procedure(s) for this buffer to update the screen for a change in a selection.
- void **remove_** (int start, int end)
Internal (non-redisplaying) version of [remove\(\)](#).
- void **remove_selection_** ([FI_Text_Selection](#) *sel)
Removes the text from the buffer corresponding to `sel`.
- void **replace_selection_** ([FI_Text_Selection](#) *sel, const char *text)
Replaces the `text` in selection `sel`.
- char * **selection_text_** ([FI_Text_Selection](#) *sel) const
- void **update_selections** (int pos, int nDeleted, int nInserted)
Updates all of the selections in the buffer for changes in the buffer's text.

Protected Attributes

- char * **mBuf**
allocated memory where the text is stored
- char **mCanUndo**
if this buffer is used for attributes, it must not do any undo calls
- void ** **mCbArgs**
caller arguments for modifyProcs above
- int **mCursorPosHint**
hint for reasonable cursor position after a buffer modification operation
- int **mGapEnd**
points to the first character after the gap
- int **mGapStart**
points to the first character of the gap
- [FI_Text_Selection](#) **mHighlight**
highlighted areas
- int **mLength**
length of the text in the buffer (the length of the buffer itself must be calculated: `gapEnd - gapStart + length`)
- [FI_Text_Modify_Cb](#) * **mModifyProcs**
procedures to call when buffer is modified to redisplay contents

- int **mNModifyProcs**
number of modify-redisplay procs attached
- int **mNPredeleteProcs**
number of pre-delete procs attached
- void ** **mPredeleteCbArgs**
caller argument for pre-delete proc above
- `Fl_Text_Predelete_Cb * mPredeleteProcs`
procedure to call before text is deleted from the buffer; at most one is supported.
- int **mPreferredGapSize**
the default allocation for the text gap is 1024 bytes and should only be increased if frequent and large changes in buffer size are expected
- `Fl_Text_Selection mPrimary`
highlighted areas
- `Fl_Text_Selection mSecondary`
highlighted areas
- int **mTabDist**
equiv.

9.134.1 Detailed Description

This class manages Unicode text displayed in one or more `Fl_Text_Display` widgets.

All text in `Fl_Text_Buffer` must be encoded in UTF-8. All indices used in the function calls must be aligned to the start of a UTF-8 sequence. All indices and pointers returned will be aligned. All functions that return a single character will return that in an unsigned int in UCS-4 encoding.

The `Fl_Text_Buffer` class is used by the `Fl_Text_Display` and `Fl_Text_Editor` to manage complex text data and is based upon the excellent NEdit text editor engine - see <http://www.nedit.org/>.

9.134.2 Constructor & Destructor Documentation

9.134.2.1 `Fl_Text_Buffer()`

```
Fl_Text_Buffer::Fl_Text_Buffer (
    int requestedSize = 0,
    int preferredGapSize = 1024 )
```

Create an empty text buffer of a pre-determined size.

Parameters

<i>requestedSize</i>	use this to avoid unnecessary re-allocation if you know exactly how much the buffer will need to hold
<i>preferredGapSize</i>	Initial size for the buffer gap (empty space in the buffer where text might be inserted if the user is typing sequential characters)

9.134.3 Member Function Documentation

9.134.3.1 `add_modify_callback()`

```
void Fl_Text_Buffer::add_modify_callback (
    Fl_Text_Modify_Cb bufModifiedCB,
    void * cbArg )
```

Adds a callback function that is called whenever the text buffer is modified.

The callback function is declared as follows:

```
typedef void (*Fl_Text_Modify_Cb)(int pos, int nInserted, int nDeleted,
    int nRestyled, const char* deletedText,
    void* cbArg);
```

9.134.3.2 address() [1/2]

```
char * Fl_Text_Buffer::address (
    int pos ) [inline]
```

Convert a byte offset in buffer into a memory address.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

byte offset converted to a memory address

9.134.3.3 address() [2/2]

```
const char * Fl_Text_Buffer::address (
    int pos ) const [inline]
```

Convert a byte offset in buffer into a memory address.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

byte offset converted to a memory address

9.134.3.4 append()

```
void Fl_Text_Buffer::append (
    const char * t ) [inline]
```

Appends the text string to the end of the buffer.

Parameters

<i>t</i>	UTF-8 encoded and nul terminated text
----------	---------------------------------------

9.134.3.5 appendfile()

```
int Fl_Text_Buffer::appendfile (
    const char * file,
    int buflen = 128*1024 ) [inline]
```

Appends the named file to the end of the buffer.

See also [insertfile\(\)](#).

9.134.3.6 byte_at()

```
char Fl_Text_Buffer::byte_at (
    int pos ) const
```

Returns the raw byte at the specified position *pos* in the buffer.

Positions start at 0.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

unencoded raw byte

9.134.3.7 char_at()

```
unsigned int Fl_Text_Buffer::char_at (
    int pos ) const
```

Returns the character at the specified position `pos` in the buffer.
Positions start at 0.

Parameters

<i>pos</i>	byte offset into buffer, <code>pos</code> must be at a UTF-8 character boundary
------------	---

Returns

Unicode UCS-4 encoded character

9.134.3.8 copy()

```
void Fl_Text_Buffer::copy (
    Fl_Text_Buffer * fromBuf,
    int fromStart,
    int fromEnd,
    int toPos )
```

Copies text from another [Fl_Text_Buffer](#) to this one.

Parameters

<i>fromBuf</i>	source text buffer, may be the same as this
<i>fromStart</i>	byte offset into buffer
<i>fromEnd</i>	byte offset into buffer
<i>toPos</i>	destination byte offset into buffer

9.134.3.9 count_displayed_characters()

```
int Fl_Text_Buffer::count_displayed_characters (
    int lineStartPos,
    int targetPos ) const
```

Count the number of displayed characters between buffer position `lineStartPos` and `targetPos`.
Displayed characters are the characters shown on the screen to represent characters in the buffer, where tabs and control characters are expanded.

9.134.3.10 count_lines()

```
int Fl_Text_Buffer::count_lines (
    int startPos,
    int endPos ) const
```

Counts the number of newlines between `startPos` and `endPos` in buffer.
The character at position `endPos` is not counted.

9.134.3.11 findchar_backward()

```
int Fl_Text_Buffer::findchar_backward (
    int startPos,
```

```
    unsigned int searchChar,
    int * foundPos ) const
```

Search backwards in buffer `buf` for character `searchChar`, starting with the character *before* `startPos`, returning the result in `foundPos`.

Returns 1 if found, 0 if not. The difference between this and [search_backward\(\)](#) is that it's optimized for single characters. The overall performance of the text widget is dependent on its ability to count lines quickly, hence searching for a single character: `newline`.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchChar</i>	UCS-4 character that we want to find
<i>foundPos</i>	byte offset where the character was found

Returns

1 if found, 0 if not

9.134.3.12 findchar_forward()

```
int Fl_Text_Buffer::findchar_forward (
    int startPos,
    unsigned searchChar,
    int * foundPos ) const
```

Finds the next occurrence of the specified character.

Search forwards in buffer for character `searchChar`, starting with the character `startPos`, and returning the result in `foundPos`. Returns 1 if found, 0 if not. The difference between this and [search_forward\(\)](#) is that it's optimized for single characters. The overall performance of the text widget is dependent on its ability to count lines quickly, hence searching for a single character: `newline`.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchChar</i>	UCS-4 character that we want to find
<i>foundPos</i>	byte offset where the character was found

Returns

1 if found, 0 if not

9.134.3.13 highlight()

```
int Fl_Text_Buffer::highlight ( ) [inline]
```

Returns the highlighted text.

When you are done with the text, free it using the `free()` function.

9.134.3.14 highlight_text()

```
char * Fl_Text_Buffer::highlight_text ( )
```

Returns the highlighted text.

When you are done with the text, free it using the `free()` function.

9.134.3.15 insert()

```
void Fl_Text_Buffer::insert (
    int pos,
    const char * text )
```

Inserts null-terminated string `text` at position `pos`.

Parameters

<code>pos</code>	insertion position as byte offset (must be UTF-8 character aligned)
<code>text</code>	UTF-8 encoded and nul terminated text

9.134.3.16 `insert_()`

```
int Fl_Text_Buffer::insert_ (
    int pos,
    const char * text ) [protected]
```

Internal (non-redisplaying) version of [insert\(\)](#).

Returns the length of text inserted (this is just `strlen(text)`, however this calculation can be expensive and the length will be required by any caller who will continue on to call `redisplay`). `pos` must be contiguous with the existing text in the buffer (i.e. not past the end).

Returns

the number of bytes inserted

9.134.3.17 `insertfile()`

```
int Fl_Text_Buffer::insertfile (
    const char * file,
    int pos,
    int buflen = 128*1024 )
```

Inserts a file at the specified position.

Returns

- 0 on success
- non-zero on error (`strerror()` contains reason)
- 1 indicates open for read failed (no data loaded)
- 2 indicates error occurred while reading data (data was partially loaded)

File can be UTF-8 or CP1252 encoded. If the input file is not UTF-8 encoded, the `Fl_Text_Buffer` widget will contain data transcoded to UTF-8. By default, the message `Fl_Text_Buffer::file_encoding_warning_message` will warn the user about this.

See also

[input_file_was_transcoded](#) and [transcoding_warning_action](#).

9.134.3.18 `length()`

```
int Fl_Text_Buffer::length ( ) const [inline]
```

Returns the number of bytes in the buffer.

Returns

size of text in bytes

9.134.3.19 `line_end()`

```
int Fl_Text_Buffer::line_end (
    int pos ) const
```

Finds and returns the position of the end of the line containing position `pos` (which is either a pointer to the newline character ending the line or a pointer to one character beyond the end of the buffer).

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to line end

9.134.3.20 line_start()

```
int Fl_Text_Buffer::line_start (
    int pos ) const
```

Returns the position of the start of the line containing position *pos*.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to line start

9.134.3.21 line_text()

```
char * Fl_Text_Buffer::line_text (
    int pos ) const
```

Returns the text from the entire line containing the specified character position. When you are done with the text, free it using the `free()` function.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

copy of UTF-8 text, must be free'd

9.134.3.22 loadfile()

```
int Fl_Text_Buffer::loadfile (
    const char * file,
    int buflen = 128*1024 ) [inline]
```

Loads a text file into the buffer.

See also [insertfile\(\)](#).

9.134.3.23 next_char()

```
int Fl_Text_Buffer::next_char (
    int ix ) const
```

Returns the index of the next character.

Parameters

<i>ix</i>	index to the current character
-----------	--------------------------------

9.134.3.24 outputfile()

```
int Fl_Text_Buffer::outputfile (
    const char * file,
    int start,
    int end,
    int buflen = 128*1024 )
```

Writes the specified portions of the text buffer to a file.

Returns

- 0 on success
- non-zero on error (strerror() contains reason)
- 1 indicates open for write failed (no data saved)
- 2 indicates error occurred while writing data (data was partially saved)

See also

[savefile\(const char *file, int buflen\)](#)

9.134.3.25 prev_char()

```
int Fl_Text_Buffer::prev_char (
    int ix ) const
```

Returns the index of the previous character.

Parameters

<i>ix</i>	index to the current character
-----------	--------------------------------

9.134.3.26 remove()

```
void Fl_Text_Buffer::remove (
    int start,
    int end )
```

Deletes a range of characters in the buffer.

Parameters

<i>start</i>	byte offset to first character to be removed
<i>end</i>	byte offset to character after last character to be removed

9.134.3.27 remove_()

```
void Fl_Text_Buffer::remove_ (
    int start,
    int end ) [protected]
```

Internal (non-redisplaying) version of [remove\(\)](#).

Removes the contents of the buffer between *start* and *end* (and moves the gap to the site of the delete).

9.134.3.28 replace()

```
void Fl_Text_Buffer::replace (
    int start,
    int end,
    const char * text )
```

Deletes the characters between *start* and *end*, and inserts the null-terminated string *text* in their place in the buffer.

Parameters

<i>start</i>	byte offset to first character to be removed and new insert position
<i>end</i>	byte offset to character after last character to be removed
<i>text</i>	UTF-8 encoded and nul terminated text

9.134.3.29 rewind_lines()

```
int Fl_Text_Buffer::rewind_lines (
    int startPos,
    int nLines )
```

Finds and returns the position of the first character of the line *nLines* backwards from *startPos* (not counting the character pointed to by *startpos* if that is a newline) in the buffer.

nLines == 0 means find the beginning of the line.

9.134.3.30 savefile()

```
int Fl_Text_Buffer::savefile (
    const char * file,
    int buflen = 128*1024 ) [inline]
```

Saves a text file from the current buffer.

Returns

- 0 on success
- non-zero on error (strerror() contains reason)
- 1 indicates open for write failed (no data saved)
- 2 indicates error occurred while writing data (data was partially saved)

See also

[outfile\(const char *file, int start, int end, int buflen\)](#)

9.134.3.31 search_backward()

```
int Fl_Text_Buffer::search_backward (
    int startPos,
    const char * searchString,
    int * foundPos,
    int matchCase = 0 ) const
```

Search backwards in buffer for string *searchString*, starting with the character *at* *startPos*, returning the result in *foundPos*.

Returns 1 if found, 0 if not.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchString</i>	UTF-8 string that we want to find
<i>foundPos</i>	byte offset where the string was found
<i>matchCase</i>	if set, match character case

Returns

1 if found, 0 if not

9.134.3.32 search_forward()

```
int Fl_Text_Buffer::search_forward (
    int startPos,
    const char * searchString,
    int * foundPos,
    int matchCase = 0 ) const
```

Search forwards in buffer for string `searchString`, starting with the character `startPos`, and returning the result in `foundPos`.

Returns 1 if found, 0 if not.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchString</i>	UTF-8 string that we want to find
<i>foundPos</i>	byte offset where the string was found
<i>matchCase</i>	if set, match character case

Returns

1 if found, 0 if not

9.134.3.33 secondary_selection_text()

```
char * Fl_Text_Buffer::secondary_selection_text ( )
```

Returns the text in the secondary selection.

When you are done with the text, free it using the `free()` function.

9.134.3.34 selection_text()

```
char * Fl_Text_Buffer::selection_text ( )
```

Returns the currently selected text.

When you are done with the text, free it using the `free()` function.

9.134.3.35 skip_displayed_characters()

```
int Fl_Text_Buffer::skip_displayed_characters (
    int lineStartPos,
    int nChars )
```

Count forward from buffer position `startPos` in displayed characters.

Displayed characters are the characters shown on the screen to represent characters in the buffer, where tabs and control characters are expanded.

Parameters

<i>lineStartPos</i>	byte offset into buffer
<i>nChars</i>	number of bytes that are sent to the display

Returns

byte offset in input after all output bytes are sent

9.134.3.36 tab_distance()

```
int Fl_Text_Buffer::tab_distance ( ) const [inline]
```

Gets the tab width.

The tab width is measured in characters. The pixel position is calculated using an average character width.

9.134.3.37 text() [1/2]

```
char * Fl_Text_Buffer::text ( ) const
```

Get a copy of the entire contents of the text buffer.

Memory is allocated to contain the returned string, which the caller must free.

Returns

newly allocated text buffer - must be free'd, text is UTF-8

9.134.3.38 text() [2/2]

```
void Fl_Text_Buffer::text (
    const char * text )
```

Replaces the entire contents of the text buffer.

Parameters

<i>text</i>	Text must be valid UTF-8. If null, an empty string is substituted.
-------------	--

9.134.3.39 text_range()

```
char * Fl_Text_Buffer::text_range (
    int start,
    int end ) const
```

Get a copy of a part of the text buffer.

Return a copy of the text between *start* and *end* character positions from text buffer *buf*. Positions start at 0, and the range does not include the character pointed to by *end*. When you are done with the text, free it using the `free()` function.

Parameters

<i>start</i>	byte offset to first character
<i>end</i>	byte offset after last character in range

Returns

newly allocated text buffer - must be free'd, text is UTF-8

9.134.3.40 word_end()

```
int Fl_Text_Buffer::word_end (
    int pos ) const
```

Returns the position corresponding to the end of the word.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to word end

9.134.3.41 word_start()

```
int Fl_Text_Buffer::word_start (
    int pos ) const
```

Returns the position corresponding to the start of the word.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to word start

9.134.4 Member Data Documentation**9.134.4.1 file_encoding_warning_message**

```
const char * Fl_Text_Buffer::file_encoding_warning_message [static]
```

Initial value:

```
=
"Displayed text contains the UTF-8 transcoding\n"
"of the input file which was not UTF-8 encoded.\n"
"Some changes may have occurred."
```

This message may be displayed using the `fl_alert()` function when a file which was not UTF-8 encoded is input.

9.134.4.2 mTabDist

```
int Fl_Text_Buffer::mTabDist [protected]
```

equiv.

number of characters in a tab

9.134.4.3 transcoding_warning_action

```
void(* Fl_Text_Buffer::transcoding_warning_action) (Fl_Text_Buffer *)
```

Pointer to a function called after reading a non UTF-8 encoded file.

This function is called after reading a file if the file content was transcoded to UTF-8. Its default implementation calls `fl_alert()` with the text of [file_encoding_warning_message](#). No warning message is displayed if this pointer is set to NULL. Use [input_file_was_transcoded](#) to be informed if file input required transcoding to UTF-8.

The documentation for this class was generated from the following files:

- `Fl_Text_Buffer.H`
- `Fl_Text_Buffer.cxx`

9.135 Fl_Text_Display Class Reference

Rich text display widget.

```
#include <Fl_Text_Display.H>
```

Inheritance diagram for `Fl_Text_Display`:

Classes

- struct [Style_Table_Entry](#)

This structure associates the color, font, and font size of a string to draw with an attribute mask matching attr.

Public Types

- enum {
[NORMAL_CURSOR](#) , [CARET_CURSOR](#) , [DIM_CURSOR](#) , [BLOCK_CURSOR](#) ,
[HEAVY_CURSOR](#) , [SIMPLE_CURSOR](#) }
text display cursor shapes enumeration
- enum { [CURSOR_POS](#) , [CHARACTER_POS](#) }
the character position is the left edge of a character, whereas the cursor is thought to be between the centers of two consecutive characters.
- enum {
DRAG_NONE = -2 , **DRAG_START_DND** = -1 , **DRAG_CHAR** = 0 , **DRAG_WORD** = 1 ,
DRAG_LINE = 2 }
drag types - they match [Fl::event_clicks\(\)](#) so that single clicking to start a collection selects by character, double clicking selects by word and triple clicking selects by line.
- enum { [WRAP_NONE](#) , [WRAP_AT_COLUMN](#) , [WRAP_AT_PIXEL](#) , [WRAP_AT_BOUNDS](#) }
wrap types - used in [wrap_mode\(\)](#)
- typedef void(* [Unfinished_Style_Cb](#)) (int, void *)

Public Member Functions

- [Fl_Text_Buffer](#) * [buffer](#) () const
Gets the current text buffer associated with the text widget.
- void [buffer](#) ([Fl_Text_Buffer](#) &buf)
Sets the current text buffer associated with the text widget.
- void [buffer](#) ([Fl_Text_Buffer](#) *buf)
Attach a text buffer to display, replacing the current buffer (if any)
- double [col_to_x](#) (double col) const
Convert a column number into an x pixel position.
- int [count_lines](#) (int start, int end, bool start_pos_is_line_start) const
Count the number of lines between two positions.
- [Fl_Color](#) [cursor_color](#) () const
Gets the text cursor color.
- void [cursor_color](#) ([Fl_Color](#) n)
Sets the text cursor color.
- void [cursor_style](#) (int style)
Sets the text cursor style.
- [Fl_Text_Display](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new text display widget.

- virtual int [handle](#) (int e)
Event handling.
- void [hide_cursor](#) ()
Hides the text cursor.
- void [highlight_data](#) (FI_Text_Buffer *styleBuffer, const [Style_Table_Entry](#) *styleTable, int nStyles, char unfinishedStyle, Unfinished_Style_Cb unfinishedHighlightCB, void *cbArg)
Attach (or remove) highlight information in text display and redisplay.
- int [in_selection](#) (int x, int y) const
Check if a pixel position is within the primary selection.
- void [insert](#) (const char *text)
Inserts "text" at the current cursor location.
- int [insert_position](#) () const
Gets the position of the text insertion cursor for text display.
- void [insert_position](#) (int newPos)
Sets the position of the text insertion cursor for text display.
- int [line_end](#) (int startPos, bool startPosIsLineStart) const
Returns the end of a line.
- int [line_start](#) (int pos) const
Return the beginning of a line.
- [FI_Align](#) [linenumber_align](#) () const
Returns the alignment used for line numbers (if enabled).
- void [linenumber_align](#) ([FI_Align](#) val)
Set alignment for line numbers (if enabled).
- [FI_Color](#) [linenumber_bgcolor](#) () const
Returns the background color used for line numbers (if enabled).
- void [linenumber_bgcolor](#) ([FI_Color](#) val)
Set the background color used for line numbers (if enabled).
- [FI_Color](#) [linenumber_fgcolor](#) () const
Return the foreground color used for line numbers (if enabled).
- void [linenumber_fgcolor](#) ([FI_Color](#) val)
Set the foreground color used for line numbers (if enabled).
- [FI_Font](#) [linenumber_font](#) () const
Return the font used for line numbers (if enabled).
- void [linenumber_font](#) ([FI_Font](#) val)
Set the font used for line numbers (if enabled).
- const char * [linenumber_format](#) () const
Returns the line number printf() format string.
- void [linenumber_format](#) (const char *val)
Sets the printf() style format string used for line numbers.
- [FI_Fontsize](#) [linenumber_size](#) () const
Return the font size used for line numbers (if enabled).
- void [linenumber_size](#) ([FI_Fontsize](#) val)
Set the font size used for line numbers (if enabled).
- int [linenumber_width](#) () const
Return the screen area width provided for line numbers.
- void [linenumber_width](#) (int width)
Set width of screen area for line numbers.
- int [move_down](#) ()
Moves the current insert position down one line.
- int [move_left](#) ()
Moves the current insert position left one character.

- int [move_right](#) ()
Moves the current insert position right one character.
- int [move_up](#) ()
Moves the current insert position up one line.
- void [next_word](#) (void)
Moves the current insert position right one word.
- void [overstrike](#) (const char *text)
Replaces text at the current insert position.
- int [position_style](#) (int lineStartPos, int lineLen, int lineIndex) const
Find the correct style for a character.
- int [position_to_xy](#) (int pos, int *x, int *y) const
Convert a character index into a pixel position.
- void [previous_word](#) (void)
Moves the current insert position left one word.
- void [redisplay_range](#) (int start, int end)
Marks text from start to end as needing a redraw.
- virtual void [resize](#) (int X, int Y, int W, int H)
Change the size of the displayed text area.
- int [rewind_lines](#) (int startPos, int nLines)
Skip a number of lines back.
- void [scroll](#) (int topLineNum, int horizOffset)
Scrolls the current buffer to start at the specified line and column.
- [Fl_Align scrollbar_align](#) () const
Gets the scrollbar alignment type.
- void [scrollbar_align](#) ([Fl_Align](#) a)
Sets the scrollbar alignment type.
- int [scrollbar_width](#) () const
Gets the width/height of the scrollbars.
- void [scrollbar_width](#) (int W)
Sets the width/height of the scrollbars.
- int [shortcut](#) () const
- void [shortcut](#) (int s)
- void [show_cursor](#) (int b=1)
Shows the text cursor.
- void [show_insert_position](#) ()
Scrolls the text buffer to show the current insert position.
- int [skip_lines](#) (int startPos, int nLines, bool startPosIsLineStart)
Skip a number of lines forward.
- [Fl_Color textcolor](#) () const
Gets the default color of text in the widget.
- void [textcolor](#) ([Fl_Color](#) n)
Sets the default color of text in the widget.
- [Fl_Font textfont](#) () const
Gets the default font used when drawing text in the widget.
- void [textfont](#) ([Fl_Font](#) s)
Sets the default font used when drawing text in the widget.
- [Fl_Fontsize textsize](#) () const
Gets the default size of text in the widget.
- void [textsize](#) ([Fl_Fontsize](#) s)
Sets the default size of text in the widget.
- int [word_end](#) (int pos) const

- Moves the insert position to the end of the current word.*

 - int `word_start` (int pos) const
- Moves the insert position to the beginning of the current word.*

 - void `wrap_mode` (int wrap, int wrap_margin)

Set the new text wrap mode.
- int `wrapped_column` (int row, int column) const

Nobody knows what this function does.
- int `wrapped_row` (int row) const

Nobody knows what this function does.
- double `x_to_col` (double x) const

Convert an x pixel position into a column number.
- `~FI_Text_Display` ()

Free a text display and release its associated memory.

Public Member Functions inherited from `FI_Group`

- `FI_Widget` *& `_ddfdesign_kludge` ()

This is for forms compatibility only.
- void `add` (`FI_Widget` &)

The widget is removed from its current group (if any) and then added to the end of this group.
- void `add` (`FI_Widget` *o)

See void `FI_Group::add(FI_Widget &w)`
- void `add_resizable` (`FI_Widget` &o)

Adds a widget to the group and makes it the resizable widget.
- `FI_Widget` *const * `array` () const

Returns a pointer to the array of children.
- virtual `FI_Group` * `as_group` ()

Returns an `FI_Group` pointer if this widget is an `FI_Group`.
- void `begin` ()

Sets the current group so you can build the widget tree by just constructing the widgets.
- `FI_Widget` * `child` (int n) const

Returns `array()[n]`.
- int `children` () const

Returns how many child widgets the group has.
- void `clear` ()

Deletes all child widgets from memory recursively.
- unsigned int `clip_children` ()

Returns the current clipping mode.
- void `clip_children` (int c)

Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void `end` ()

Exactly the same as `current(this->parent())`.
- int `find` (const `FI_Widget` &o) const

*See int `FI_Group::find(const FI_Widget *w)` const.*
- int `find` (const `FI_Widget` *) const

Searches the child array for the widget and returns the index.
- `FI_Group` (int, int, int, int, const char *s=0)

Creates a new `FI_Group` widget using the given position, size, and label string.
- void `focus` (`FI_Widget` *W)
- void `forms_end` ()

This is for forms compatibility only.

- void `init_sizes` ()
Resets the internal array of widget sizes and positions.
- void `insert` (FI_Widget &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void `insert` (FI_Widget &o, FI_Widget *before)
This does insert(w, find(before)).
- void `remove` (FI_Widget &)
Removes a widget from the group but does not delete it.
- void `remove` (FI_Widget *o)
Removes the widget o from the group.
- void `remove` (int index)
Removes the widget at index from the group but does not delete it.
- FI_Widget * `resizable` () const
*See void FI_Group::resizable(FI_Widget *box)*
- void `resizable` (FI_Widget &o)
*See void FI_Group::resizable(FI_Widget *box)*
- void `resizable` (FI_Widget *o)
The resizable widget defines the resizing box for the group.
- virtual `~FI_Group` ()
The destructor also deletes all the children.

Public Member Functions inherited from FI_Widget

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
Activates the widget.
- unsigned int `active` () const
Returns whether the widget is active.
- int `active_r` () const
Returns whether the widget and all of its parents are active.
- FI_Align `align` () const
Gets the label alignment.
- void `align` (FI_Align alignment)
Sets the label alignment.
- long `argument` () const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class FI_Gl_Window * `as_gl_window` ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual FI_Window * `as_window` ()
Returns an FI_Window pointer if this widget is an FI_Window.
- FI_Boxtype `box` () const
Gets the box type of the widget.
- void `box` (FI_Boxtype new_box)
Sets the box type for the widget.
- FI_Callback_p `callback` () const
Gets the current callback function for the widget.
- void `callback` (FI_Callback *cb)
Sets the current callback function for the widget.

- void `callback` (`FI_Callback *cb`, void *p)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0 *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1 *cb`, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color color` () const
Gets the background color of the widget.
- void `color` (`FI_Color bg`)
Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)
Sets the background and selection color of the widget.
- `FI_Color color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FI_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)
Sets the damage bits for the widget.
- void `damage` (`uchar c`, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FI_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const
- void `deimage` (`FI_Image &img`)
Sets the image to use as part of the widget label.

- void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
- `FL_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color c`)
Sets the label color.
- `FL_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font f`)
Sets the font to use.
- `FL_Fontsize labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fontsize pix`)
Sets the font size in pixels.
- `FL_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype a`)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.

- `FI_Group * parent ()` const
Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `FI_Color selection_color ()` const
Gets the selection color.
- `void selection_color (FI_Color a)`
Sets the selection color.
- `void set_active ()`
Marks the widget as active without sending events or changing focus.
- `void set_changed ()`
Marks the value of the widget as changed.
- `void set_output ()`
Sets a widget to output only.
- `void set_visible ()`
Makes the widget visible.
- `void set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- virtual `void show ()`
Makes a widget visible.
- `void size (int W, int H)`
Changes the size of the widget.
- `int take_focus ()`
Gives the widget the keyboard focus.
- `unsigned int takeevents ()` const
Returns if the widget is able to take events.
- `int test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- `const char * tooltip ()` const
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `FI_Window * top_window ()` const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset (int &xoff, int &yoff)` const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type ()` const
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data ()` const
Gets the user data for this widget.
- `void user_data (void *v)`

- *Sets the user data for this widget.*
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Protected Types

- enum { `DRAW_LINE` , `FIND_INDEX` , `FIND_INDEX_FROM_ZERO` , `GET_WIDTH` }

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions

- void `absolute_top_line_number` (int oldFirstChar)
Line numbering stuff, currently unused.
- void `calc_last_char` ()
Update last display character index.
- void `calc_line_starts` (int startLine, int endLine)
Update the line start arrays.
- void `clear_rect` (int style, int x, int y, int width, int height) const
Clear a rectangle with the appropriate background color for `style`.
- void `display_insert` ()

- Scroll the display to bring insertion cursor into view.*

 - virtual void `draw` ()

Draw the widget.
- void `draw_cursor` (int, int)
 - *Draw a cursor with top center at X, Y.*
- void `draw_line_numbers` (bool clearAll)
 - *Refresh the line number area.*
- void `draw_range` (int start, int end)
 - *Draw a range of text.*
- void `draw_string` (int style, int x, int y, int toX, const char *string, int nChars) const
 - *Draw a text segment in a single style.*
- void `draw_text` (int X, int Y, int W, int H)
 - *Refresh a rectangle of the text display.*
- void `draw_vline` (int visLineNum, int leftClip, int rightClip, int leftCharIndex, int rightCharIndex)
 - *Draw a single line of text.*
- int `empty_vlines` () const
 - *Return true if there are lines visible with no corresponding buffer text.*
- void `extend_range_for_styles` (int *start, int *end)
 - *I don't know what this does!*
- void `find_line_end` (int pos, bool start_pos_is_line_start, int *lineEnd, int *nextLineStart) const
 - *Finds both the end of the current line and the start of the next line.*
- void `find_wrap_range` (const char *deletedText, int pos, int nInserted, int nDeleted, int *modRangeStart, int *modRangeEnd, int *linesInserted, int *linesDeleted)
 - *Wrapping calculations.*
- int `find_x` (const char *s, int len, int style, int x) const
 - *Find the index of the character that lies at the given x position.*
- int `get_absolute_top_line_number` () const
 - *Line numbering stuff, currently unused.*
- int `handle_vline` (int mode, int lineStart, int lineLen, int leftChar, int rightChar, int topClip, int bottomClip, int leftClip, int rightClip) const
 - *Universal pixel machine.*
- int `longest_vline` () const
 - *Find the longest line of all visible lines.*
- void `maintain_absolute_top_line_number` (int state)
 - *Line numbering stuff, currently unused.*
- int `maintaining_absolute_top_line_number` () const
 - *Line numbering stuff, currently unused.*
- void `measure_deleted_lines` (int pos, int nDeleted)
 - *Wrapping calculations.*
- double `measure_proportional_character` (const char *s, int colNum, int pos) const
 - *Wrapping calculations.*
- int `measure_vline` (int visLineNum) const
 - *Returns the width in pixels of the displayed line pointed to by "visLineNum".*
- void `offset_line_starts` (int newTopLineNum)
 - *Offset line start counters for a new vertical scroll position.*
- int `position_to_line` (int pos, int *lineNum) const
 - *Convert a position index into a line number offset.*
- int `position_to_linecol` (int pos, int *lineNum, int *column) const
 - *Find the line and column number of position pos.*
- void `reset_absolute_top_line_number` ()
 - *Line numbering stuff, probably unused.*

- int `scroll_` (int topLineNum, int horizOffset)

Scrolls the current buffer to start at the specified line and column.
- double `string_width` (const char *string, int length, int style) const

Find the width of a string in the font of a particular style.
- void `update_h_scrollbar` ()

Update horizontal scrollbar.
- void `update_line_starts` (int pos, int charsInserted, int charsDeleted, int linesInserted, int linesDeleted, int *scrolled)

Update line start arrays and variables.
- void `update_v_scrollbar` ()

Update vertical scrollbar.
- int `vline_length` (int visLineNum) const

Count number of bytes in a visible line.
- int `wrap_uses_character` (int lineEndPos) const

Check if the line break is caused by a \n or by line wrapping.
- void `wrapped_line_counter` (FI_Text_Buffer *buf, int startPos, int maxPos, int maxLines, bool startPosIs↵LineStart, int styleBufOffset, int *retPos, int *retLines, int *retLineStart, int *retLineEnd, bool countLast↵LineMissingNewLine=true) const

Wrapping calculations.
- int `xy_to_position` (int x, int y, int PosType=CHARACTER_POS) const

Translate a pixel position into a character index.
- void `xy_to_rowcol` (int x, int y, int *row, int *column, int PosType=CHARACTER_POS) const

Translate pixel coordinates into row and column.

Protected Member Functions inherited from FI_Group

- void `draw_child` (FI_Widget &widget) const

Forces a child to redraw.
- void `draw_children` ()

Draws all children of the group.
- void `draw_outside_label` (const FI_Widget &widget) const

Parents normally call this to draw outside labels of child widgets.
- int * `sizes` ()

Returns the internal array of widget sizes and positions.
- void `update_child` (FI_Widget &widget) const

Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void `clear_flag` (unsigned int c)

Clears a flag in the flags mask.
- void `draw_backdrop` () const

If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void `draw_box` () const

Draws the widget box according its box style.
- void `draw_box` (FI_Boxtype t, FI_Color c) const

Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const

Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` ()

draws a focus rectangle around the widget
- void `draw_focus` (FI_Boxtype t, int x, int y, int w, int h) const

- Draws a focus box for the widget at the given position and size.*

 - void `draw_label` () const

Draws the widget's label at the defined label position.

 - void `draw_label` (int, int, int, int) const

Draws the label in an arbitrary bounding box.

 - `Fl_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label=0L`)

Creates a widget at the given position and size.

 - unsigned int `flags` () const

Gets the widget flags mask.

 - void `h` (int `v`)

Internal use only.

 - void `set_flag` (unsigned int `c`)

Sets a flag in the flags mask.

 - void `w` (int `v`)

Internal use only.

 - void `x` (int `v`)

Internal use only.

 - void `y` (int `v`)

Internal use only.

Static Protected Member Functions

- static void `buffer_modified_cb` (int `pos`, int `nInserted`, int `nDeleted`, int `nRestyled`, const char *`deletedText`, void *`cbArg`)
- This is called whenever the buffer is modified.*
- static void `buffer_predelete_cb` (int `pos`, int `nDeleted`, void *`cbArg`)
- This is called before any characters are deleted.*
- static void `h_scrollbar_cb` (`Fl_Scrollbar` *`w`, `Fl_Text_Display` *`d`)
- Callbacks for drag or valueChanged on horizontal scrollbar.*
- static void `scroll_timer_cb` (void *)
- Timer callback for scroll events.*
- static void `v_scrollbar_cb` (`Fl_Scrollbar` *`w`, `Fl_Text_Display` *`d`)
- Callbacks for drag or valueChanged on vertical scrollbar.*

Protected Attributes

- int `damage_range1_end`

- [FI_Fontsize](#) **textsize_**

Friends

- void **fl_text_drag_me** (int pos, [FI_Text_Display](#) *d)

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Group`

- static `Fl_Group * current ()`
Returns the currently active group.
- static void `current (Fl_Group *g)`
Sets the current group.

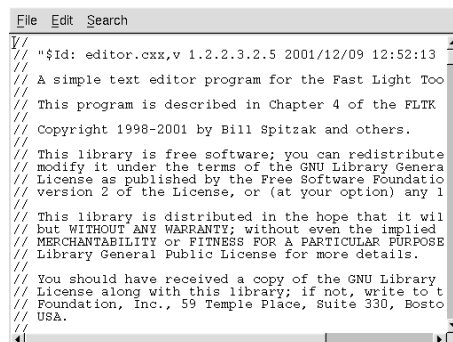

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback (Fl_Widget *cb, void *d)`
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut (const char *t)`
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut (const char *, const bool require_alt=false)`
Returns true if the given text t contains the entered '&x' shortcut.

9.135.1 Detailed Description

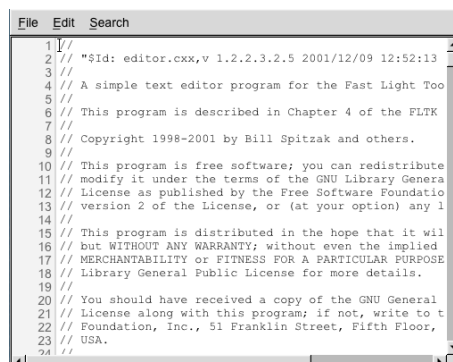

Rich text display widget.

This is the FLTK text display widget. It allows the user to view multiple lines of text and supports highlighting, word wrap, mixes of font faces and colors, line numbers and scrolling. The buffer that is displayed in the widget is managed by the `Fl_Text_Buffer` class. A single Text Buffer can be displayed by multiple Text Displays.

```

Figure 9.42 `Fl_Text_Display` widget with line numbers enabled

Example Use

```
#include <FL/FL_Text_Display.H>
..
int main() {
    ..
    Fl_Text_Buffer *buff = new Fl_Text_Buffer();
    Fl_Text_Display *disp = new Fl_Text_Display(10, 10, 640, 480);
    disp->buffer(buff); // attach text buffer to display widget
    buff->text("line one\nline two"); // add some text to buffer
    ..
}
```

Features

- Word wrap: [wrap_mode\(\)](#), [wrapped_column\(\)](#), [wrapped_row\(\)](#)
- Font control: [textfont\(\)](#), [textsize\(\)](#), [textcolor\(\)](#)
- Font styling: [highlight_data\(\)](#)
- Cursor: [cursor_style\(\)](#), [show_cursor\(\)](#), [hide_cursor\(\)](#), [cursor_color\(\)](#)
- Line numbers: [linenumber_width\(\)](#), [linenumber_font\(\)](#), [linenumber_size\(\)](#), [linenumber_fgcolor\(\)](#), [linenumber_bgcolor\(\)](#), [linenumber_align\(\)](#), [linenumber_format\(\)](#)

Note that other features may be available via [Fl_Text_Editor](#) and [Fl_Text_Buffer](#) classes.

Note

Line numbers were added in 1.3.3. To avoid breaking ABI, many of its options are read only. To adjust these features in 1.3.x, you must build FLTK with `FLTK_ABI_VERSION` set to 10303 or higher.

9.135.2 Member Enumeration Documentation

9.135.2.1 anonymous enum

anonymous enum

text display cursor shapes enumeration

Enumerator

NORMAL_CURSOR	I-beam.
CARET_CURSOR	caret under the text
DIM_CURSOR	dim I-beam
BLOCK_CURSOR	unfill box under the current character
HEAVY_CURSOR	thick I-beam
SIMPLE_CURSOR	as cursor as Fl_Input cursor

9.135.2.2 anonymous enum

anonymous enum

wrap types - used in [wrap_mode\(\)](#)

Enumerator

WRAP_NONE	don't wrap text at all
WRAP_AT_COLUMN	wrap text at the given text column
WRAP_AT_PIXEL	wrap text at a pixel position
WRAP_AT_BOUNDS	wrap text so that it fits into the widget width

9.135.3 Constructor & Destructor Documentation

9.135.3.1 Fl_Text_Display()

```
Fl_Text_Display::Fl_Text_Display (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new text display widget.

Parameters

<i>X,Y,W,H</i>	position and size of widget
<i>l</i>	label text, defaults to none

9.135.3.2 ~Fl_Text_Display()

```
Fl_Text_Display::~~Fl_Text_Display ( )
```

Free a text display and release its associated memory.

Note, the text BUFFER that the text display displays is a separate entity and is not freed, nor are the style buffer or style table.

9.135.4 Member Function Documentation

9.135.4.1 absolute_top_line_number()

```
void Fl_Text_Display::absolute_top_line_number (
    int oldFirstChar ) [protected]
```

Line numbering stuff, currently unused.

Re-calculate absolute top line number for a change in scroll position.

9.135.4.2 buffer() [1/3]

```
Fl_Text_Buffer * Fl_Text_Display::buffer ( ) const [inline]
```

Gets the current text buffer associated with the text widget.

Multiple text widgets can be associated with the same text buffer.

Returns

current text buffer

9.135.4.3 buffer() [2/3]

```
void Fl_Text_Display::buffer (
    Fl_Text_Buffer & buf ) [inline]
```

Sets the current text buffer associated with the text widget.

Multiple text widgets can be associated with the same text buffer.

Parameters

<i>buf</i>	new text buffer
------------	-----------------

9.135.4.4 buffer() [3/3]

```
void Fl_Text_Display::buffer (
    Fl_Text_Buffer * buf )
```

Attach a text buffer to display, replacing the current buffer (if any)

Parameters

<i>buf</i>	attach this text buffer
------------	-------------------------

9.135.4.5 buffer_modified_cb()

```
void Fl_Text_Display::buffer_modified_cb (
    int pos,
    int nInserted,
    int nDeleted,
    int nRestyled,
    const char * deletedText,
    void * cbArg ) [static], [protected]
```

This is called whenever the buffer is modified.

Callback attached to the text buffer to receive modification information

This callback can be used to adjust the display or update other setting. It is not advisable to change any buffers or text in this callback, or line counting may get out of sync.

Parameters

<i>pos</i>	starting index of modification
<i>nInserted</i>	number of bytes we inserted (must be UTF-8 aligned!)
<i>nDeleted</i>	number of bytes deleted (must be UTF-8 aligned!)
<i>nRestyled</i>	??
<i>deletedText</i>	this is what was removed, must not be NULL if nDeleted is set
<i>cbArg</i>	"this" pointer for static callback function

9.135.4.6 buffer_predelete_cb()

```
void Fl_Text_Display::buffer_predelete_cb (
    int pos,
    int nDeleted,
    void * cbArg ) [static], [protected]
```

This is called before any characters are deleted.

Callback attached to the text buffer to receive delete information before the modifications are actually made.

This callback can be used to adjust the display or update other setting. It is not advisable to change any buffers or text in this callback, or line counting may get out of sync.

Parameters

<i>pos</i>	starting index of deletion
<i>nDeleted</i>	number of bytes we will delete (must be UTF-8 aligned!)
<i>cbArg</i>	"this" pointer for static callback function

9.135.4.7 calc_last_char()

```
void Fl_Text_Display::calc_last_char ( ) [protected]
```

Update last display character index.

Given a [Fl_Text_Display](#) with a complete, up-to-date lineStarts array, update the lastChar entry to point to the last buffer position displayed.

9.135.4.8 calc_line_starts()

```
void Fl_Text_Display::calc_line_starts (
    int startLine,
    int endLine ) [protected]
```

Update the line start arrays.

Scan through the text in the "textD"'s buffer and recalculate the line starts array values beginning at index "startLine" and continuing through (including) "endLine". It assumes that the line starts entry preceding "startLine" (or mFirstChar if startLine is 0) is good, and re-counts newlines to fill in the requested entries. Out of range values for "startLine" and "endLine" are acceptable.

Parameters

<i>startLine,endLine</i>	range of lines to scan as line numbers
--------------------------	--

9.135.4.9 clear_rect()

```
void Fl_Text_Display::clear_rect (
    int style,
    int X,
    int Y,
    int width,
    int height ) const [protected]
```

Clear a rectangle with the appropriate background color for *style*.

Parameters

<i>style</i>	index into style table
<i>X,Y,width,height</i>	size and position of background area

9.135.4.10 col_to_x()

```
double Fl_Text_Display::col_to_x (
    double col ) const
```

Convert a column number into an x pixel position.

Parameters

<i>col</i>	an approximate column number based on the main font
------------	---

Returns

number of pixels from the left margin to the left of an average sized character

9.135.4.11 count_lines()

```
int Fl_Text_Display::count_lines (
    int startPos,
    int endPos,
    bool startPosIsLineStart ) const
```

Count the number of lines between two positions.

Same as [Fl_Text_Buffer::count_lines\(\)](#), but takes into account wrapping if wrapping is turned on. If the caller knows that *startPos* is at a line start, it can pass *startPosIsLineStart* as True to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Parameters

<i>startPos</i>	index to first character
<i>endPos</i>	index after last character
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

number of lines

9.135.4.12 cursor_color() [1/2]

```
Fl_Color Fl_Text_Display::cursor_color ( ) const [inline]
```

Gets the text cursor color.

Returns

cursor color

9.135.4.13 cursor_color() [2/2]

```
void Fl_Text_Display::cursor_color (
    Fl_Color n ) [inline]
```

Sets the text cursor color.

Parameters

<i>n</i>	new cursor color
----------	------------------

9.135.4.14 cursor_style()

```
void Fl_Text_Display::cursor_style (
    int style )
```

Sets the text cursor style.

Sets the text cursor style to one of the following:

- [Fl_Text_Display::NORMAL_CURSOR](#) - Shows an I beam.
- [Fl_Text_Display::CARET_CURSOR](#) - Shows a caret under the text.
- [Fl_Text_Display::DIM_CURSOR](#) - Shows a dimmed I beam.
- [Fl_Text_Display::BLOCK_CURSOR](#) - Shows an unfilled box around the current character.
- [Fl_Text_Display::HEAVY_CURSOR](#) - Shows a thick I beam.

This call also switches the cursor on and may trigger a redraw.

Parameters

<i>style</i>	new cursor style
--------------	------------------

9.135.4.15 display_insert()

```
void Fl_Text_Display::display_insert ( ) [protected]
```

Scroll the display to bring insertion cursor into view.

Note: it would be nice to be able to do this without counting lines twice (`scroll_()` counts them too) and/or to count from the most efficient starting point, but the efficiency of this routine is not as important to the overall performance of the text display.

Todo Unicode?

9.135.4.16 `draw()`

```
void Fl_Text_Display::draw (
    void ) [protected], [virtual]
```

Draw the widget.

This function tries to limit drawing to smaller areas if possible.

Reimplemented from [Fl_Group](#).

9.135.4.17 `draw_cursor()`

```
void Fl_Text_Display::draw_cursor (
    int X,
    int Y ) [protected]
```

Draw a cursor with top center at X, Y.

Parameters

<i>X, Y</i>	cursor position in pixels
-------------	---------------------------

9.135.4.18 `draw_line_numbers()`

```
void Fl_Text_Display::draw_line_numbers (
    bool clearAll ) [protected]
```

Refresh the line number area.

Parameters

<i>clearAll</i>	– (currently unused) If False, only draws the line number text, does not clear the area behind it. If True, clears the area and redraws the text. Use False to avoid a 'flash' for single buffered windows.
-----------------	---

9.135.4.19 `draw_range()`

```
void Fl_Text_Display::draw_range (
    int startpos,
    int endpos ) [protected]
```

Draw a range of text.

Refresh all of the text between buffer positions `startpos` and `endpos` not including the character at the position `endpos`.

If `endpos` points beyond the end of the buffer, refresh the whole display after `startpos`, including blank lines which are not technically part of any range of characters.

Parameters

<i>startpos</i>	index of first character to draw
<i>endpos</i>	index after last character to draw

9.135.4.20 draw_string()

```
void Fl_Text_Display::draw_string (
    int style,
    int X,
    int Y,
    int toX,
    const char * string,
    int nChars ) const [protected]
```

Draw a text segment in a single style.

Draw a string or blank area according to parameter *style*, using the appropriate colors and drawing method for that style, with top left corner at X, Y. If style says to draw text, use *string* as source of characters, and draw *nChars*, if style is FILL, erase rectangle where text would have drawn from X to *toX* and from Y to the maximum y extent of the current font(s).

Parameters

<i>style</i>	index into style lookup table
<i>X,Y</i>	drawing origin
<i>toX</i>	rightmost position if this is a fill operation
<i>string</i>	text if this is a drawing operation
<i>nChars</i>	number of characters to draw

9.135.4.21 draw_text()

```
void Fl_Text_Display::draw_text (
    int left,
    int top,
    int width,
    int height ) [protected]
```

Refresh a rectangle of the text display.

Parameters

<i>left,top</i>	are in coordinates of the text drawing window.
<i>width,height</i>	size in pixels

9.135.4.22 draw_vline()

```
void Fl_Text_Display::draw_vline (
    int visLineNum,
    int leftClip,
    int rightClip,
    int leftCharIndex,
    int rightCharIndex ) [protected]
```

Draw a single line of text.

Draw the text on a single line represented by *visLineNum* (the number of lines down from the top of the display), limited by *leftClip* and *rightClip* window coordinates and *leftCharIndex* and *rightCharIndex* character positions (not including the character at position *rightCharIndex*).

Parameters

<i>visLineNum</i>	index of line in the visible line number lookup
<i>leftClip,rightClip</i>	pixel position of clipped area
<i>leftCharIndex,rightCharIndex</i>	index into line of segment that we want to draw

9.135.4.23 empty_vlines()

```
int Fl_Text_Display::empty_vlines ( ) const [protected]
```

Return true if there are lines visible with no corresponding buffer text.

Returns

1 if there are empty lines

9.135.4.24 extend_range_for_styles()

```
void Fl_Text_Display::extend_range_for_styles (
    int * startpos,
    int * endpos ) [protected]
```

I don't know what this does!

Extend the range of a redraw request (from *start to *end) with additional redraw requests resulting from changes to the attached style buffer (which contains auxiliary information for coloring or styling text).

Parameters

<i>startpos</i>	??
<i>endpos</i>	??

Todo Unicode?

9.135.4.25 find_line_end()

```
void Fl_Text_Display::find_line_end (
    int startPos,
    bool startPosIsLineStart,
    int * lineEnd,
    int * nextLineStart ) const [protected]
```

Finds both the end of the current line and the start of the next line.

Why? In continuous wrap mode, if you need to know both, figuring out one from the other can be expensive or error prone. The problem comes when there's a trailing space or tab just before the end of the buffer. To translate an end of line value to or from the next lines start value, you need to know whether the trailing space or tab is being used as a line break or just a normal character, and to find that out would otherwise require counting all the way back to the beginning of the line.

Parameters

	<i>startPos</i>	
	<i>startPosIsLineStart</i>	
out	<i>lineEnd</i>	
out	<i>nextLineStart</i>	

9.135.4.26 find_wrap_range()

```
void Fl_Text_Display::find_wrap_range (
    const char * deletedText,
    int pos,
    int nInserted,
    int nDeleted,
    int * modRangeStart,
    int * modRangeEnd,
```

```
int * linesInserted,
int * linesDeleted ) [protected]
```

Wrapping calculations.

When continuous wrap is on, and the user inserts or deletes characters, wrapping can happen before and beyond the changed position. This routine finds the extent of the changes, and counts the deleted and inserted lines over that range. It also attempts to minimize the size of the range to what has to be counted and re-displayed, so the results can be useful both for delimiting where the line starts need to be recalculated, and for deciding what part of the text to redisplay.

Parameters

<i>deletedText</i>	
<i>pos</i>	
<i>nInserted</i>	
<i>nDeleted</i>	
<i>modRangeStart</i>	
<i>modRangeEnd</i>	
<i>linesInserted</i>	
<i>linesDeleted</i>	

9.135.4.27 find_x()

```
int Fl_Text_Display::find_x (
    const char * s,
    int len,
    int style,
    int x ) const [protected]
```

Find the index of the character that lies at the given x position.

Parameters

<i>s</i>	UTF-8 text string
<i>len</i>	length of string
<i>style</i>	index into style lookup table
<i>x</i>	position in pixels

Returns

index into buffer

9.135.4.28 get_absolute_top_line_number()

```
int Fl_Text_Display::get_absolute_top_line_number ( ) const [protected]
```

Line numbering stuff, currently unused.

Returns the absolute (non-wrapped) line number of the first line displayed. Returns 0 if the absolute top line number is not being maintained.

9.135.4.29 handle()

```
int Fl_Text_Display::handle (
    int e ) [virtual]
```

Event handling.

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Text_Editor](#).

9.135.4.30 handle_vline()

```
int Fl_Text_Display::handle_vline (
    int mode,
    int lineStartPos,
    int lineLen,
    int leftChar,
    int rightChar,
    int Y,
    int bottomClip,
    int leftClip,
    int rightClip ) const [protected]
```

Universal pixel machine.

We use a single function that handles all line layout, measuring, and drawing

- draw a text range
- return the width of a text range in pixels
- return the index of a character that is at a pixel position

Parameters

in	<i>mode</i>	DRAW_LINE, GET_WIDTH, FIND_INDEX
in	<i>lineStartPos</i>	index of first character
in	<i>lineLen</i>	size of string in bytes
in	<i>leftChar, rightChar</i>	
in	<i>Y</i>	drawing position
in	<i>bottomClip, leftClip, rightClip</i>	stop work when we reach the clipped area. rightClip is the X position that we search in FIND_INDEX.

Return values

<i>DRAW_LINE</i>	index of last drawn character
<i>GET_WIDTH</i>	width in pixels of text segment if we would draw it
<i>FIND_INDEX</i>	index of character at given x position in window coordinates
<i>FIND_INDEX_FROM_ZERO</i>	index of character at given x position without scrolling and widget offsets

Todo we need to handle hidden hyphens and tabs here!

we handle all styles and selections

we must provide code to get pixel positions of the middle of a character as well

9.135.4.31 highlight_data()

```
void Fl_Text_Display::highlight_data (
    Fl_Text_Buffer * styleBuffer,
    const Style_Table_Entry * styleTable,
    int nStyles,
    char unfinishedStyle,
    Unfinished_Style_Cb unfinishedHighlightCB,
    void * cbArg )
```

Attach (or remove) highlight information in text display and redisplay.

Highlighting information consists of a style buffer which parallels the normal text buffer, but codes font and color information for the display; a style table which translates style buffer codes (indexed by buffer character - 'A') into fonts

and colors; and a callback mechanism for as-needed highlighting, triggered by a style buffer entry of "unfinished↔ Style". Style buffer can trigger additional redisplay during a normal buffer modification if the buffer contains a primary [Fl_Text_Selection](#) (see `extendRangeForStyleMods` for more information on this protocol).

Style buffers, tables and their associated memory are managed by the caller.

Styles are ranged from 65 ('A') to 126.

Parameters

<i>styleBuffer</i>	this buffer works in parallel to the text buffer. For every character in the text buffer, the style buffer has a byte at the same offset that contains an index into an array of possible styles.
<i>styleTable</i>	a list of styles indexed by the style buffer
<i>nStyles</i>	number of styles in the style table
<i>unfinishedStyle</i>	if this style is found, the callback below is called
<i>unfinishedHighlightCB</i>	if a character with an unfinished style is found, this callback will be called
<i>cbArg</i>	and optional argument for the callback above, usually a pointer to the Text Display.

9.135.4.32 in_selection()

```
int Fl_Text_Display::in_selection (
    int X,
    int Y ) const
```

Check if a pixel position is within the primary selection.

Parameters

<i>X, Y</i>	pixel position to test
-------------	------------------------

Returns

1 if position (X, Y) is inside of the primary [Fl_Text_Selection](#)

9.135.4.33 insert()

```
void Fl_Text_Display::insert (
    const char * text )
```

Inserts "text" at the current cursor location.

This has the same effect as inserting the text into the buffer using `BuflInsert` and then moving the insert position after the newly inserted text, except that it's optimized to do less redrawing.

Parameters

<i>text</i>	new text in UTF-8 encoding.
-------------	-----------------------------

9.135.4.34 insert_position() [1/2]

```
int Fl_Text_Display::insert_position ( ) const [inline]
```

Gets the position of the text insertion cursor for text display.

Returns

insert position index into text buffer

9.135.4.35 insert_position() [2/2]

```
void Fl_Text_Display::insert_position (
    int newPos )
```

Sets the position of the text insertion cursor for text display.

Move the insertion cursor in front of the character at `newPos`. This function may trigger a redraw.

Parameters

<i>newPos</i>	new caret position
---------------	--------------------

9.135.4.36 line_end()

```
int Fl_Text_Display::line_end (
    int startPos,
    bool startPosIsLineStart ) const
```

Returns the end of a line.

Same as `BufEndOfLine`, but takes into account line breaks when wrapping is turned on. If the caller knows that `startPos` is at a line start, it can pass "startPosIsLineStart" as True to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Note that the definition of the end of a line is less clear when continuous wrap is on. With continuous wrap off, it's just a pointer to the newline that ends the line. When it's on, it's the character beyond the last **displayable** character on the line, where a whitespace character which has been "converted" to a newline for wrapping is not considered displayable. Also note that a line can be wrapped at a non-whitespace character if the line had no whitespace. In this case, this routine returns a pointer to the start of the next line. This is also consistent with the model used by `visLineLength`.

Parameters

<i>startPos</i>	index to starting character
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

new position as index

9.135.4.37 line_start()

```
int Fl_Text_Display::line_start (
    int pos ) const
```

Return the beginning of a line.

Same as `BufStartOfLine`, but returns the character after last wrap point rather than the last newline.

Parameters

<i>pos</i>	index to starting character
------------	-----------------------------

Returns

new position as index

9.135.4.38 linewidth_align()

```
void Fl_Text_Display::linewidth_align (
    Fl_Align val )
```

Set alignment for line numbers (if enabled).

Valid values are FL_ALIGN_LEFT, FL_ALIGN_CENTER or FL_ALIGN_RIGHT.

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.39 linenumber_bgcolor()

```
void Fl_Text_Display::linenumber_bgcolor (
    Fl_Color val )
```

Set the background color used for line numbers (if enabled).

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.40 linenumber_fgcolor()

```
void Fl_Text_Display::linenumber_fgcolor (
    Fl_Color val )
```

Set the foreground color used for line numbers (if enabled).

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.41 linenumber_font()

```
void Fl_Text_Display::linenumber_font (
    Fl_Font val )
```

Set the font used for line numbers (if enabled).

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.42 linenumber_format()

```
void Fl_Text_Display::linenumber_format (
    const char * val )
```

Sets the printf() style format string used for line numbers.

Default is "%d" for normal unpadded decimal integers.

An internal copy of `val` is allocated and managed; it is automatically freed whenever a new value is assigned, or when the widget is destroyed.

The value of `val` must *not* be NULL.

Example values:

```
- "%d" -- For normal line numbers without padding (Default)
- "%03d" -- For 000 padding
- "%x" -- For hexadecimal line numbers
- "%o" -- For octal line numbers
```

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.43 linenumber_size()

```
void Fl_Text_Display::linenumber_size (
    Fl_Fontsize val )
```

Set the font size used for line numbers (if enabled).

Version

1.3.3 ABI feature (ignored in 1.3.x unless FLTK_ABI_VERSION is 10303 or higher)

9.135.4.44 linenumber_width()

```
void Fl_Text_Display::linenumber_width (
    int width )
```

Set width of screen area for line numbers.

Use to also enable/disable line numbers. A value of 0 disables line numbering, values >0 enable the line number display.

Parameters

<i>width</i>	The new width of the area for line numbers to appear, in pixels. 0 disables line numbers (default)
--------------	--

9.135.4.45 longest_vline()

```
int Fl_Text_Display::longest_vline ( ) const [protected]
```

Find the longest line of all visible lines.

Returns

the width of the longest visible line in pixels

9.135.4.46 maintain_absolute_top_line_number()

```
void Fl_Text_Display::maintain_absolute_top_line_number (
    int state ) [protected]
```

Line numbering stuff, currently unused.

In continuous wrap mode, internal line numbers are calculated after wrapping. A separate non-wrapped line count is maintained when line numbering is turned on. There is some performance cost to maintaining this line count, so normally absolute line numbers are not tracked if line numbering is off. This routine allows callers to specify that they still want this line count maintained (for use via `TextDPosToLineAndCol`). More specifically, this allows the line number reported in the statistics line to be calibrated in absolute lines, rather than post-wrapped lines.

9.135.4.47 maintaining_absolute_top_line_number()

```
int Fl_Text_Display::maintaining_absolute_top_line_number ( ) const [protected]
```

Line numbering stuff, currently unused.

Return true if a separate absolute top line number is being maintained (for displaying line numbers or showing in the statistics line).

9.135.4.48 measure_deleted_lines()

```
void Fl_Text_Display::measure_deleted_lines (
    int pos,
    int nDeleted ) [protected]
```

Wrapping calculations.

This is a stripped-down version of the `findWrapRange()` function above, intended to be used to calculate the number of "deleted" lines during a buffer modification. It is called *before* the modification takes place.

This function should only be called in continuous wrap mode with a non-fixed font width. In that case, it is impossible to calculate the number of deleted lines, because the necessary style information is no longer available *after* the modification. In other cases, we can still perform the calculation afterwards (possibly even more efficiently).

Parameters

<i>pos</i>	
<i>nDeleted</i>	

9.135.4.49 measure_proportional_character()

```
double Fl_Text_Display::measure_proportional_character (
    const char * s,
    int xPix,
    int pos ) const [protected]
```

Wrapping calculations.

Measure the width in pixels of the first character of string "s" at a particular column "colNum" and buffer position "pos". This is for measuring characters in proportional or mixed-width highlighting fonts.

A note about proportional and mixed-width fonts: the mixed width and proportional font code in nedit does not get much use in general editing, because nedit doesn't allow per-language-mode fonts, and editing programs in a proportional font is usually a bad idea, so very few users would choose a proportional font as a default. There are still probably mixed-width syntax highlighting cases where things don't redraw properly for insertion/deletion, though static display and wrapping and resizing should now be solid because they are now used for online help display.

Parameters

<i>s</i>	text string
<i>xPix</i>	x pixel position needed for calculating tab widths
<i>pos</i>	offset within string

Returns

width of character in pixels

9.135.4.50 measure_vline()

```
int Fl_Text_Display::measure_vline (
    int visLineNum ) const [protected]
```

Returns the width in pixels of the displayed line pointed to by "visLineNum".

Parameters

<i>visLineNum</i>	index into visible lines array
-------------------	--------------------------------

Returns

width of line in pixels

9.135.4.51 move_down()

```
int Fl_Text_Display::move_down ( )
```

Moves the current insert position down one line.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

9.135.4.52 move_left()

```
int Fl_Text_Display::move_left ( )
```

Moves the current insert position left one character.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

9.135.4.53 move_right()

```
int Fl_Text_Display::move_right ( )
```

Moves the current insert position right one character.

Returns

1 if the cursor moved, 0 if the end of the text was reached

9.135.4.54 move_up()

```
int Fl_Text_Display::move_up ( )
```

Moves the current insert position up one line.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

9.135.4.55 offset_line_starts()

```
void Fl_Text_Display::offset_line_starts (
    int newTopLineNum ) [protected]
```

Offset line start counters for a new vertical scroll position.

Offset the line starts array, mTopLineNum, mFirstChar and lastChar, for a new vertical scroll position given by new↔TopLineNum. If any currently displayed lines will still be visible, salvage the line starts values, otherwise, count lines from the nearest known line start (start or end of buffer, or the closest value in the mLineStarts array)

Parameters

<i>newTopLineNum</i>	index into buffer
----------------------	-------------------

9.135.4.56 overstrike()

```
void Fl_Text_Display::overstrike (
    const char * text )
```

Replaces text at the current insert position.

Parameters

<i>text</i>	new text in UTF-8 encoding
-------------	----------------------------

Todo Unicode? Find out exactly what we do here and simplify.

9.135.4.57 position_style()

```
int Fl_Text_Display::position_style (
    int lineStartPos,
    int lineLen,
    int lineIndex ) const
```

Find the correct style for a character.

Determine the drawing method to use to draw a specific character from "buf". lineStartPos gives the character index where the line begins, lineIndex, the number of characters past the beginning of the line, and line↔Index the number of displayed characters past the beginning of the line. Passing lineStartPos of -1 returns the drawing style for "no text".

Why not just: position_style(pos)? Because style applies to blank areas of the window beyond the text boundaries, and because this routine must also decide whether a position is inside of a rectangular [Fl_Text_Selection](#), and do so efficiently, without re-counting character positions from the start of the line.

Note that `style` is a somewhat incorrect name, `drawing` method would be more appropriate.

Parameters

<i>lineStartPos</i>	beginning of this line
<i>lineLen</i>	number of bytes in line
<i>lineIndex</i>	position of character within line

Returns

style for the given character

9.135.4.58 `position_to_line()`

```
int Fl_Text_Display::position_to_line (
    int pos,
    int * lineNum ) const [protected]
```

Convert a position index into a line number offset.

Find the line number of position `pos` relative to the first line of displayed text. Returns 0 if the line is not displayed.

Parameters

	<i>pos</i>	??
out	<i>lineNum</i>	??

Returns

??

Todo What does this do?

9.135.4.59 `position_to_linecol()`

```
int Fl_Text_Display::position_to_linecol (
    int pos,
    int * lineNum,
    int * column ) const [protected]
```

Find the line and column number of position `pos`.

This only works for displayed lines. If the line is not displayed, the function returns 0 (without the `mLineStarts` array it could turn in to very long calculation involving scanning large amounts of text in the buffer). If continuous wrap mode is on, returns the absolute line number (as opposed to the wrapped line number which is used for scrolling).

Parameters

	<i>pos</i>	character index
out	<i>lineNum</i>	absolute (unwrapped) line number
out	<i>column</i>	character offset to the beginning of the line

Returns

0 if `pos` is off screen, line number otherwise

Todo a column number makes little sense in the UTF-8/variable font width environment. We will have to further define what exactly we want to return. Please check the functions that call this particular function.

9.135.4.60 position_to_xy()

```
int Fl_Text_Display::position_to_xy (
    int pos,
    int * X,
    int * Y ) const
```

Convert a character index into a pixel position.

Translate a buffer text position to the XY location where the top left of the cursor would be positioned to point to that character. Returns 0 if the position is not displayed because it is **vertically out** of view. If the position is horizontally out of view, returns the X coordinate where the position would be if it were visible.

Parameters

	<i>pos</i>	character index
out	<i>X, Y</i>	pixel position of character on screen

Returns

0 if character vertically out of view, X & Y positions otherwise

9.135.4.61 redisplay_range()

```
void Fl_Text_Display::redisplay_range (
    int startpos,
    int endpos )
```

Marks text from start to end as needing a redraw.

This function will trigger a damage event and later a redraw of parts of the widget.

Parameters

<i>startpos</i>	index of first character needing redraw
<i>endpos</i>	index after last character needing redraw

9.135.4.62 reset_absolute_top_line_number()

```
void Fl_Text_Display::reset_absolute_top_line_number ( ) [protected]
```

Line numbering stuff, probably unused.

Count lines from the beginning of the buffer to reestablish the absolute (non-wrapped) top line number. If mode is not continuous wrap, or the number is not being maintained, does nothing.

9.135.4.63 resize()

```
void Fl_Text_Display::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Change the size of the displayed text area.

Calling this function will trigger a recalculation of all lines visible and of all scrollbar sizes.

Parameters

<i>X, Y, W, H</i>	new position and size of this widget
-------------------	--------------------------------------

Reimplemented from [Fl_Group](#).

9.135.4.64 rewind_lines()

```
int Fl_Text_Display::rewind_lines (
    int startPos,
    int nLines )
```

Skip a number of lines back.

Same as BufCountBackwardNLines, but takes into account line breaks when wrapping is turned on.

Parameters

<i>startPos</i>	index to starting character
<i>nLines</i>	number of lines to skip back

Returns

new position as index

9.135.4.65 scroll()

```
void Fl_Text_Display::scroll (
    int topLineNum,
    int horizOffset )
```

Scrolls the current buffer to start at the specified line and column.

Parameters

<i>topLineNum</i>	top line number
<i>horizOffset</i>	column number

Todo Column numbers make little sense here.

9.135.4.66 scroll_()

```
int Fl_Text_Display::scroll_ (
    int topLineNum,
    int horizOffset ) [protected]
```

Scrolls the current buffer to start at the specified line and column.

Parameters

<i>topLineNum</i>	top line number
<i>horizOffset</i>	in pixels

Returns

0 if nothing changed, 1 if we scrolled

9.135.4.67 scroll_timer_cb()

```
void Fl_Text_Display::scroll_timer_cb (
    void * user_data ) [static], [protected]
```

Timer callback for scroll events.

This timer event scrolls the text view proportionally to how far the mouse pointer has left the text area. This allows for smooth scrolling without "wiggeling" the mouse.

9.135.4.68 scrollbar_align() [1/2]

```
Fl_Align Fl_Text_Display::scrollbar_align ( ) const [inline]
```

Gets the scrollbar alignment type.

Returns

scrollbar alignment

9.135.4.69 scrollbar_align() [2/2]

```
void Fl_Text_Display::scrollbar_align (
    Fl_Align a ) [inline]
```

Sets the scrollbar alignment type.

Parameters

<i>a</i>	new scrollbar alignment
----------	-------------------------

9.135.4.70 scrollbar_width() [1/2]

```
int Fl_Text_Display::scrollbar_width ( ) const [inline]
```

Gets the width/height of the scrollbars.

Returns

width of scrollbars

9.135.4.71 scrollbar_width() [2/2]

```
void Fl_Text_Display::scrollbar_width (
    int W ) [inline]
```

Sets the width/height of the scrollbars.

Parameters

<i>W</i>	width of scrollbars
----------	---------------------

9.135.4.72 shortcut() [1/2]

```
int Fl_Text_Display::shortcut ( ) const [inline]
```

Todo FIXME : get set methods pointing on shortcut_ have no effects as shortcut_ is unused in this class and derived!

Returns

the current shortcut key

9.135.4.73 shortcut() [2/2]

```
void Fl_Text_Display::shortcut (
    int s ) [inline]
```

Todo FIXME : get set methods pointing on shortcut_ have no effects as shortcut_ is unused in this class and derived!

Parameters

<i>s</i>	the new shortcut key
----------	----------------------

9.135.4.74 show_cursor()

```
void Fl_Text_Display::show_cursor (
    int b = 1 )
```

Shows the text cursor.

This function may trigger a redraw.

Parameters

<i>b</i>	show(1) or hide(0) the text cursor (caret).
----------	---

9.135.4.75 show_insert_position()

```
void Fl_Text_Display::show_insert_position ( )
```

Scrolls the text buffer to show the current insert position.

This function triggers a complete recalculation, ending in a call to [Fl_Text_Display::display_insert\(\)](#)

9.135.4.76 skip_lines()

```
int Fl_Text_Display::skip_lines (
    int startPos,
    int nLines,
    bool startPosIsLineStart )
```

Skip a number of lines forward.

Same as BufCountForwardNLines, but takes into account line breaks when wrapping is turned on. If the caller knows that startPos is at a line start, it can pass "startPosIsLineStart" as True to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Parameters

<i>startPos</i>	index to starting character
<i>nLines</i>	number of lines to skip ahead
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

new position as index

9.135.4.77 string_width()

```
double Fl_Text_Display::string_width (
    const char * string,
    int length,
    int style ) const [protected]
```

Find the width of a string in the font of a particular style.

Parameters

<i>string</i>	the text
<i>length</i>	number of bytes in string
<i>style</i>	index into style table

Returns

width of text segment in pixels

9.135.4.78 textcolor() [1/2]

```
Fl_Color Fl_Text_Display::textcolor ( ) const [inline]
```

Gets the default color of text in the widget.

Returns

text color unless overridden by a style

9.135.4.79 textcolor() [2/2]

```
void Fl_Text_Display::textcolor (
    Fl_Color n ) [inline]
```

Sets the default color of text in the widget.

Parameters

<i>n</i>	new text color
----------	----------------

9.135.4.80 textfont() [1/2]

```
Fl_Font Fl_Text_Display::textfont ( ) const [inline]
```

Gets the default font used when drawing text in the widget.

Returns

current text font face unless overridden by a style

9.135.4.81 textfont() [2/2]

```
void Fl_Text_Display::textfont (
    Fl_Font s ) [inline]
```

Sets the default font used when drawing text in the widget.

Parameters

<i>s</i>	default text font face
----------	------------------------

9.135.4.82 textsize() [1/2]

```
Fl_Fontsize Fl_Text_Display::textsize ( ) const [inline]
```

Gets the default size of text in the widget.

Returns

current text height unless overridden by a style

9.135.4.83 textsize() [2/2]

```
void Fl_Text_Display::textsize (
    Fl_Fontsize s ) [inline]
```

Sets the default size of text in the widget.

Parameters

<i>s</i>	new text size
----------	---------------

9.135.4.84 update_h_scrollbar()

```
void Fl_Text_Display::update_h_scrollbar ( ) [protected]
```

Update horizontal scrollbar.

Update the minimum, maximum, slider size, page increment, and value for the horizontal scrollbar.

9.135.4.85 update_line_starts()

```
void Fl_Text_Display::update_line_starts (
    int pos,
    int charsInserted,
    int charsDeleted,
    int linesInserted,
    int linesDeleted,
    int * scrolled ) [protected]
```

Update line start arrays and variables.

Update the line starts array, mTopLineNum, mFirstChar and lastChar for this text display after a modification to the text buffer, given by the position *pos* where the change began, and the numbers of characters and lines inserted and deleted.

Parameters

	<i>pos</i>	index into buffer of recent changes
	<i>charsInserted</i>	number of bytes(!) inserted
	<i>charsDeleted</i>	number of bytes(!) deleted
	<i>linesInserted</i>	number of lines
	<i>linesDeleted</i>	number of lines
out	<i>scrolled</i>	set to 1 if the text display needs to be scrolled

9.135.4.86 update_v_scrollbar()

```
void Fl_Text_Display::update_v_scrollbar ( ) [protected]
```

Update vertical scrollbar.

Update the minimum, maximum, slider size, page increment, and value for the vertical scrollbar.

9.135.4.87 vline_length()

```
int Fl_Text_Display::vline_length (
    int visLineNum ) const [protected]
```

Count number of bytes in a visible line.

Return the length of a line (number of bytes) by examining entries in the line starts array rather than by scanning for newlines.

Parameters

<i>visLineNum</i>	index of line in visible line array
-------------------	-------------------------------------

Returns

number of bytes in this line

9.135.4.88 word_end()

```
int Fl_Text_Display::word_end (
    int pos ) const [inline]
```

Moves the insert position to the end of the current word.

Parameters

<i>pos</i>	start calculation at this index
------------	---------------------------------

Returns

index of first character after the end of the word

9.135.4.89 word_start()

```
int Fl_Text_Display::word_start (
    int pos ) const [inline]
```

Moves the insert position to the beginning of the current word.

Parameters

<i>pos</i>	start calculation at this index
------------	---------------------------------

Returns

beginning of the words

9.135.4.90 wrap_mode()

```
void Fl_Text_Display::wrap_mode (
    int wrap,
    int wrapMargin )
```

Set the new text wrap mode.

If *wrap* mode is not zero, this call enables automatic word wrapping at column *wrapMargin*. Word-wrapping does not change the text buffer itself, only the way the text is displayed. Different Text Displays can have different wrap modes, even if they share the same Text Buffer.

Parameters

<i>wrap</i>	new wrap mode is WRAP_NONE (don't wrap text at all), WRAP_AT_COLUMN (wrap text at the given text column), WRAP_AT_PIXEL (wrap text at a pixel position), or WRAP_AT_BOUNDS (wrap text so that it fits into the widget width)
<i>wrapMargin</i>	in WRAP_AT_COLUMN mode, text will wrap at the n'th character. For variable width fonts, an average character width is calculated. The column width is calculated using the current textfont or the first style when this function is called. If the font size changes, this function must be called again. In WRAP_AT_PIXEL mode, this is the pixel position.

Todo we need new wrap modes to wrap at the window edge and based on pixel width or average character width.

9.135.4.91 wrap_uses_character()

```
int Fl_Text_Display::wrap_uses_character (
    int lineEndPos ) const [protected]
```

Check if the line break is caused by a `\n` or by line wrapping.

Line breaks in continuous wrap mode usually happen at newlines or whitespace. This line-terminating character is not included in line width measurements and has a special status as a non-visible character. However, lines with no whitespace are wrapped without the benefit of a line terminating character, and this distinction causes endless trouble with all of the text display code which was originally written without continuous wrap mode and always expects to wrap at a newline character.

Given the position of the end of the line, as returned by `TextEndOfLine` or `BufEndOfLine`, this returns true if there is a line terminating character, and false if there's not. On the last character in the buffer, this function can't tell for certain whether a trailing space was used as a wrap point, and just guesses that it wasn't. So if an exact accounting is necessary, don't use this function.

Parameters

<i>lineEndPos</i>	index of character where the line wraps
-------------------	---

Returns

1 if a `\n` character causes the line wrap

9.135.4.92 wrapped_column()

```
int Fl_Text_Display::wrapped_column (
    int row,
    int column ) const
```

Nobody knows what this function does.

Correct a column number based on an unconstrained position (as returned by `TextDXYToUnconstrainedPosition`) to be relative to the last actual newline in the buffer before the row and column position given, rather than the last line start created by line wrapping. This is an adapter for rectangular selections and code written before continuous wrap mode, which thinks that the unconstrained column is the number of characters from the last newline. Obviously this is time consuming, because it involves character re-counting.

Parameters

<i>row</i>	
<i>column</i>	

Returns

something unknown

Todo What does this do and how is it useful? Column numbers mean little in this context. Which functions depend on this one?

Todo Unicode?

9.135.4.93 wrapped_line_counter()

```
void Fl_Text_Display::wrapped_line_counter (
    Fl_Text_Buffer * buf,
    int startPos,
    int maxPos,
    int maxLines,
    bool startPosIsLineStart,
    int styleBufOffset,
    int * retPos,
    int * retLines,
    int * retLineStart,
    int * retLineEnd,
    bool countLastLineMissingNewLine = true ) const [protected]
```

Wrapping calculations.

Count forward from `startPos` to either `maxPos` or `maxLines` (whichever is reached first), and return all relevant positions and line count. The provided `textBuffer` may differ from the actual text buffer of the widget. In that case it must be a (partial) copy of the actual text buffer and the `styleBufOffset` argument must indicate the starting position of the copy, to take into account the correct style information.

Parameters

in	<i>buf</i>	The text buffer to operate on
in	<i>startPos</i>	Starting index position into the buffer
in	<i>maxPos</i>	Maximum index position into the buffer we'll reach
in	<i>maxLines</i>	Maximum number of lines we'll reach
in	<i>startPosIsLineStart</i>	Flag indicating if <code>startPos</code> is start of line. (If set, prevents our having to find the line start)
in	<i>styleBufOffset</i>	Offset index position into style buffer.
out	<i>retPos</i>	Position where counting ended. When counting lines, the position returned is the start of the line "maxLines" lines beyond "startPos".
out	<i>retLines</i>	Number of line breaks counted
out	<i>retLineStart</i>	Start of the line where counting ended
out	<i>retLineEnd</i>	End position of the last line traversed
out	<i>countLastLineMissingNewLine</i>	

9.135.4.94 wrapped_row()

```
int Fl_Text_Display::wrapped_row (
    int row ) const
```

Nobody knows what this function does.

Correct a row number from an unconstrained position (as returned by `TextDXYToUnconstrainedPosition`) to a straight number of newlines from the top line of the display. Because rectangular selections are based on newlines, rather than display wrapping, and anywhere a rectangular selection needs a row, it needs it in terms of un-wrapped lines.

Parameters

<i>row</i>	
------------	--

Returns

something unknown

Todo What does this do and how is it useful? Column numbers mean little in this context. Which functions depend on this one?

9.135.4.95 x_to_col()

```
double Fl_Text_Display::x_to_col (
    double x ) const
```

Convert an `x` pixel position into a column number.

Parameters

<i>x</i>	number of pixels from the left margin
----------	---------------------------------------

Returns

an approximate column number based on the main font

9.135.4.96 xy_to_position()

```
int Fl_Text_Display::xy_to_position (
    int X,
    int Y,
    int posType = CHARACTER_POS ) const [protected]
```

Translate a pixel position into a character index.

Translate window coordinates to the nearest (insert cursor or character cell) text position. The parameter `posType` specifies how to interpret the position: `CURSOR_POS` means translate the coordinates to the nearest cursor position, and `CHARACTER_POS` means return the position of the character closest to (X, Y).

Parameters

<i>X, Y</i>	pixel position
<i>posType</i>	CURSOR_POS or CHARACTER_POS

Returns

index into text buffer

9.135.4.97 xy_to_rowcol()

```
void Fl_Text_Display::xy_to_rowcol (
    int X,
    int Y,
    int * row,
    int * column,
    int posType = CHARACTER_POS ) const [protected]
```

Translate pixel coordinates into row and column.

Translate window coordinates to the nearest row and column number for positioning the cursor. This, of course, makes no sense when the font is proportional, since there are no absolute columns. The parameter `posType` specifies how to interpret the position: `CURSOR_POS` means translate the coordinates to the nearest position between characters, and `CHARACTER_POS` means translate the position to the nearest character cell.

Parameters

	<i>X, Y</i>	pixel coordinates
<i>out</i>	<i>row, column</i>	nearest row and column
	<i>posType</i>	CURSOR_POS or CHARACTER_POS

The documentation for this class was generated from the following files:

- Fl_Text_Display.H
- Fl_Text_Display.cxx

9.136 Fl_Text_Editor Class Reference

This is the FLTK text editor widget.

```
#include <Fl_Text_Editor.H>
```

Inheritance diagram for Fl_Text_Editor:

Classes

- struct [Key_Binding](#)
Simple linked list item associating a key/state to a function.

Public Types

- typedef int(* [Key_Func](#)) (int key, [Fl_Text_Editor](#) *editor)
Key function binding callback type.

Public Types inherited from [Fl_Text_Display](#)

- enum {
[NORMAL_CURSOR](#), [CARET_CURSOR](#), [DIM_CURSOR](#), [BLOCK_CURSOR](#),
[HEAVY_CURSOR](#), [SIMPLE_CURSOR](#) }
text display cursor shapes enumeration
- enum { [CURSOR_POS](#), [CHARACTER_POS](#) }
the character position is the left edge of a character, whereas the cursor is thought to be between the centers of two consecutive characters.
- enum {
[DRAG_NONE](#) = -2, [DRAG_START_DND](#) = -1, [DRAG_CHAR](#) = 0, [DRAG_WORD](#) = 1,
[DRAG_LINE](#) = 2 }
drag types - they match [Fl::event_clicks\(\)](#) so that single clicking to start a collection selects by character, double clicking selects by word and triple clicking selects by line.
- enum { [WRAP_NONE](#), [WRAP_AT_COLUMN](#), [WRAP_AT_PIXEL](#), [WRAP_AT_BOUNDS](#) }
wrap types - used in [wrap_mode\(\)](#)
- typedef void(* [Unfinished_Style_Cb](#)) (int, void *)

Public Member Functions

- void [add_default_key_bindings](#) ([Key_Binding](#) **list)
Adds all of the default editor key bindings to the specified key binding list.
- void [add_key_binding](#) (int key, int state, [Key_Func](#) f)
Adds a key of state state with the function f.
- void [add_key_binding](#) (int key, int state, [Key_Func](#) f, [Key_Binding](#) **list)
Adds a key of state state with the function function to an arbitrary key binding list list.
- [Key_Func](#) [bound_key_function](#) (int key, int state) const
Returns the function associated with a key binding.
- [Key_Func](#) [bound_key_function](#) (int key, int state, [Key_Binding](#) *list) const
Returns the function associated with a key binding.
- void [default_key_function](#) ([Key_Func](#) f)
Sets the default key function for unassigned keys.
- [Fl_Text_Editor](#) (int X, int Y, int W, int H, const char *l=0)
The constructor creates a new text editor widget.

- virtual int [handle](#) (int e)
Event handling.
- int [insert_mode](#) ()
Gets the current insert mode; if non-zero, new text is inserted before the current cursor position.
- void [insert_mode](#) (int b)
Sets the current insert mode; if non-zero, new text is inserted before the current cursor position.
- void [remove_all_key_bindings](#) ()
Removes all of the key bindings associated with the text editor or list.
- void [remove_all_key_bindings](#) ([Key_Binding](#) **list)
Removes all of the key bindings associated with the text editor or list.
- void [remove_key_binding](#) (int key, int state)
Removes the key binding associated with the key "key" of state "state".
- void [remove_key_binding](#) (int key, int state, [Key_Binding](#) **list)
Removes the key binding associated with the key key of state state from the Key_Binding list list.
- int [tab_nav](#) () const
Check if Tab focus navigation is enabled.
- void [tab_nav](#) (int val)
Enables or disables Tab key focus navigation.

Public Member Functions inherited from [FI_Text_Display](#)

- [FI_Text_Buffer](#) * [buffer](#) () const
Gets the current text buffer associated with the text widget.
- void [buffer](#) ([FI_Text_Buffer](#) &buf)
Sets the current text buffer associated with the text widget.
- void [buffer](#) ([FI_Text_Buffer](#) *buf)
Attach a text buffer to display, replacing the current buffer (if any)
- double [col_to_x](#) (double col) const
Convert a column number into an x pixel position.
- int [count_lines](#) (int start, int end, bool start_pos_is_line_start) const
Count the number of lines between two positions.
- [FI_Color](#) [cursor_color](#) () const
Gets the text cursor color.
- void [cursor_color](#) ([FI_Color](#) n)
Sets the text cursor color.
- void [cursor_style](#) (int style)
Sets the text cursor style.
- [FI_Text_Display](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new text display widget.
- void [hide_cursor](#) ()
Hides the text cursor.
- void [highlight_data](#) ([FI_Text_Buffer](#) *styleBuffer, const [Style_Table_Entry](#) *styleTable, int nStyles, char unfinishedStyle, Unfinished_Style_Cb unfinishedHighlightCB, void *cbArg)
Attach (or remove) highlight information in text display and redisplay.
- int [in_selection](#) (int x, int y) const
Check if a pixel position is within the primary selection.
- void [insert](#) (const char *text)
Inserts "text" at the current cursor location.
- int [insert_position](#) () const
Gets the position of the text insertion cursor for text display.
- void [insert_position](#) (int newPos)

- Sets the position of the text insertion cursor for text display.*

 - int **line_end** (int startPos, bool startPosIsLineStart) const
Returns the end of a line.
 - int **line_start** (int pos) const
Return the beginning of a line.
 - **FI_Align** **linenumber_align** () const
Returns the alignment used for line numbers (if enabled).
 - void **linenumber_align** (**FI_Align** val)
Set alignment for line numbers (if enabled).
 - **FI_Color** **linenumber_bgcolor** () const
Returns the background color used for line numbers (if enabled).
 - void **linenumber_bgcolor** (**FI_Color** val)
Set the background color used for line numbers (if enabled).
 - **FI_Color** **linenumber_fgcolor** () const
Return the foreground color used for line numbers (if enabled).
 - void **linenumber_fgcolor** (**FI_Color** val)
Set the foreground color used for line numbers (if enabled).
 - **FI_Font** **linenumber_font** () const
Return the font used for line numbers (if enabled).
 - void **linenumber_font** (**FI_Font** val)
Set the font used for line numbers (if enabled).
 - const char * **linenumber_format** () const
Returns the line number printf() format string.
 - void **linenumber_format** (const char *val)
Sets the printf() style format string used for line numbers.
 - **FI_Fontsize** **linenumber_size** () const
Return the font size used for line numbers (if enabled).
 - void **linenumber_size** (**FI_Fontsize** val)
Set the font size used for line numbers (if enabled).
 - int **linenumber_width** () const
Return the screen area width provided for line numbers.
 - void **linenumber_width** (int width)
Set width of screen area for line numbers.
 - int **move_down** ()
Moves the current insert position down one line.
 - int **move_left** ()
Moves the current insert position left one character.
 - int **move_right** ()
Moves the current insert position right one character.
 - int **move_up** ()
Moves the current insert position up one line.
 - void **next_word** (void)
Moves the current insert position right one word.
 - void **overstrike** (const char *text)
Replaces text at the current insert position.
 - int **position_style** (int lineStartPos, int lineLen, int lineIndex) const
Find the correct style for a character.
 - int **position_to_xy** (int pos, int *x, int *y) const
Convert a character index into a pixel position.
 - void **previous_word** (void)
Moves the current insert position left one word.

- void `redisplay_range` (int start, int end)
Marks text from start to end as needing a redraw.
- virtual void `resize` (int X, int Y, int W, int H)
Change the size of the displayed text area.
- int `rewind_lines` (int startPos, int nLines)
Skip a number of lines back.
- void `scroll` (int topLineNum, int horizOffset)
Scrolls the current buffer to start at the specified line and column.
- `Fl_Align scrollbar_align` () const
Gets the scrollbar alignment type.
- void `scrollbar_align` (`Fl_Align` a)
Sets the scrollbar alignment type.
- int `scrollbar_width` () const
Gets the width/height of the scrollbars.
- void `scrollbar_width` (int W)
Sets the width/height of the scrollbars.
- int `shortcut` () const
- void `shortcut` (int s)
- void `show_cursor` (int b=1)
Shows the text cursor.
- void `show_insert_position` ()
Scrolls the text buffer to show the current insert position.
- int `skip_lines` (int startPos, int nLines, bool startPosIsLineStart)
Skip a number of lines forward.
- `Fl_Color textcolor` () const
Gets the default color of text in the widget.
- void `textcolor` (`Fl_Color` n)
Sets the default color of text in the widget.
- `Fl_Font textfont` () const
Gets the default font used when drawing text in the widget.
- void `textfont` (`Fl_Font` s)
Sets the default font used when drawing text in the widget.
- `Fl_Fontsize textsize` () const
Gets the default size of text in the widget.
- void `textsize` (`Fl_Fontsize` s)
Sets the default size of text in the widget.
- int `word_end` (int pos) const
Moves the insert position to the end of the current word.
- int `word_start` (int pos) const
Moves the insert position to the beginning of the current word.
- void `wrap_mode` (int wrap, int wrap_margin)
Set the new text wrap mode.
- int `wrapped_column` (int row, int column) const
Nobody knows what this function does.
- int `wrapped_row` (int row) const
Nobody knows what this function does.
- double `x_to_col` (double x) const
Convert an x pixel position into a column number.
- `~Fl_Text_Display` ()
Free a text display and release its associated memory.

Public Member Functions inherited from [FI_Group](#)

- [FI_Widget](#) * & [_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FI_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FI_Widget](#) *o)
See void [FI_Group::add\(FI_Widget &w\)](#)
- void [add_resizable](#) ([FI_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FI_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FI_Widget](#) * [child](#) (int n) const
Returns [array\(\)\[n\]](#).
- int [children](#) () const
Returns how many child widgets the group has.
- void [clear](#) ()
Deletes all child widgets from memory recursively.
- unsigned int [clip_children](#) ()
Returns the current clipping mode.
- void [clip_children](#) (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void [end](#) ()
Exactly the same as [current\(this->parent\(\)\)](#).
- int [find](#) (const [FI_Widget](#) &o) const
*See int [FI_Group::find\(const FI_Widget *w\) const](#).*
- int [find](#) (const [FI_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FI_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FI_Group](#) widget using the given position, size, and label string.
- void [focus](#) ([FI_Widget](#) *W)
- void [forms_end](#) ()
This is for forms compatibility only.
- void [init_sizes](#) ()
Resets the internal array of widget sizes and positions.
- void [insert](#) ([FI_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void [insert](#) ([FI_Widget](#) &o, [FI_Widget](#) *before)
This does [insert\(w, find\(before\)\)](#).
- void [remove](#) ([FI_Widget](#) &)
Removes a widget from the group but does not delete it.
- void [remove](#) ([FI_Widget](#) *o)
Removes the widget o from the group.
- void [remove](#) (int index)
Removes the widget at `index` from the group but does not delete it.
- [FI_Widget](#) * [resizable](#) () const
*See void [FI_Group::resizable\(FI_Widget *box\)](#)*

- void **resizable** (FI_Widget &o)
*See void FI_Group::resizable(FI_Widget *box)*
- void **resizable** (FI_Widget *o)
The resizable widget defines the resizing box for the group.
- virtual **~FI_Group** ()
The destructor also deletes all the children.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (FI_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_GI_Window * as_gi_window** ()
Returns an FI_GI_Window pointer if this widget is an FI_GI_Window.
- virtual **FI_Window * as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (FI_Boxtype new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (FI_Callback *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback *cb, void *p)
Sets the current callback function for the widget.
- void **callback** (FI_Callback0 *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback1 *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (uchar c=0)
Clears or sets the damage flags.

- void `clear_output ()`
Sets a widget to accept input.
- void `clear_visible ()`
Hides the widget.
- void `clear_visible_focus ()`
Disables keyboard focus navigation with this widget.
- `FI_Color color () const`
Gets the background color of the widget.
- void `color (FI_Color bg)`
Sets the background color of the widget.
- void `color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
- `FI_Color color2 () const`
For back compatibility only.
- void `color2 (unsigned a)`
For back compatibility only.
- int `contains (const FI_Widget *w) const`
Checks if w is a child of this widget.
- void `copy_label (const char *new_label)`
Sets the current label.
- void `copy_tooltip (const char *text)`
Sets the current tooltip text.
- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- void `damage (uchar c)`
Sets the damage bits for the widget.
- void `damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
- int `damage_resize (int, int, int, int)`
Internal use only.
- void `deactivate ()`
Deactivates the widget.
- `FI_Image * deimage ()`
Gets the image that is used as part of the widget label.
- const `FI_Image * deimage () const`
- void `deimage (FI_Image &img)`
Sets the image to use as part of the widget label.
- void `deimage (FI_Image *img)`
Sets the image to use as part of the widget label.
- void `do_callback ()`
Calls the widget callback.
- void `do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
- void `do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
- void `draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h () const`
Gets the widget height.
- virtual void `hide ()`
Makes a widget invisible.

- `FI_Image * image ()`
Gets the image that is used as part of the widget label.
- `const FI_Image * image () const`
- `void image (FI_Image &img)`
Sets the image to use as part of the widget label.
- `void image (FI_Image *img)`
Sets the image to use as part of the widget label.
- `int inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- `void labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fontsize labelsize () const`
Gets the font size in pixels.
- `void labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FI_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `FI_Color selection_color () const`
Gets the selection color.
- `void selection_color (FI_Color a)`
Sets the selection color.

- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `Fl_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `Fl_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` i)

- Sets the flags used to decide when a callback is called.*
- [FI_Window * window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Static Public Member Functions

- static int [kf_backspace](#) (int c, [FI_Text_Editor *e](#))
Does a backspace for key 'c' in the current buffer of editor 'e'.
- static int [kf_c_s_move](#) (int c, [FI_Text_Editor *e](#))
Extends the current selection in the direction indicated by control key 'c' in editor 'e'.
- static int [kf_copy](#) (int c, [FI_Text_Editor *e](#))
Does a copy of selected text or the current character in the current buffer of editor 'e'.
- static int [kf_ctrl_move](#) (int c, [FI_Text_Editor *e](#))
Moves the current text cursor in the direction indicated by control key 'c' in editor 'e'.
- static int [kf_cut](#) (int c, [FI_Text_Editor *e](#))
Does a cut of selected text in the current buffer of editor 'e'.
- static int [kf_default](#) (int c, [FI_Text_Editor *e](#))
Inserts the text associated with key 'c' in editor 'e'.
- static int [kf_delete](#) (int c, [FI_Text_Editor *e](#))
Does a delete of selected text or the current character in the current buffer of editor 'e'.
- static int [kf_down](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor one line down for editor 'e'.
- static int [kf_end](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor to the end of the current line in editor 'e'.
- static int [kf_enter](#) (int c, [FI_Text_Editor *e](#))
Inserts a newline for key 'c' at the current cursor position in editor 'e'.
- static int [kf_home](#) (int, [FI_Text_Editor *e](#))
Moves the text cursor to the beginning of the current line in editor 'e'.
- static int [kf_ignore](#) (int c, [FI_Text_Editor *e](#))
Ignores the key 'c' in editor 'e'.
- static int [kf_insert](#) (int c, [FI_Text_Editor *e](#))
Toggles the insert mode for editor 'e'.
- static int [kf_left](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor one character to the left in editor 'e'.
- static int [kf_m_s_move](#) (int c, [FI_Text_Editor *e](#))
Extends the current selection in the direction indicated by meta key 'c' in editor 'e'.
- static int [kf_meta_move](#) (int c, [FI_Text_Editor *e](#))
Moves the current text cursor in the direction indicated by meta key 'c' in editor 'e'.
- static int [kf_move](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor in the direction indicated by key 'c' in editor 'e'.
- static int [kf_page_down](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor down one page for editor 'e'.
- static int [kf_page_up](#) (int c, [FI_Text_Editor *e](#))
Moves the text cursor up one page for editor 'e'.
- static int [kf_paste](#) (int c, [FI_Text_Editor *e](#))

- Does a paste of selected text in the current buffer of editor 'e'.*

 - static int `kf_right` (int c, `FI_Text_Editor *e`)

Moves the text cursor one character to the right for editor 'e'.
- static int `kf_select_all` (int c, `FI_Text_Editor *e`)

Selects all text in the current buffer in editor 'e'.
- static int `kf_shift_move` (int c, `FI_Text_Editor *e`)

Extends the current selection in the direction of key 'c' in editor 'e'.
- static int `kf_undo` (int c, `FI_Text_Editor *e`)

Undo last edit in the current buffer of editor 'e'.
- static int `kf_up` (int c, `FI_Text_Editor *e`)

Moves the text cursor one line up for editor 'e'.

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group * current` ()
- Returns the currently active group.*
- static void `current` (`FI_Group *g`)
- Sets the current group.*

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget *cb`, void *d)
- The default callback for all widgets that don't set a callback.*
- static unsigned int `label_shortcut` (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int `test_shortcut` (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

Protected Member Functions

- int `handle_key` ()
- Handles a key press in the editor.*
- void `maybe_do_callback` ()
- does or does not a callback according to `changed()` and `when()` settings*

Protected Member Functions inherited from `FI_Text_Display`

- void `absolute_top_line_number` (int oldFirstChar)
- Line numbering stuff, currently unused.*
- void `calc_last_char` ()
- Update last display character index.*
- void `calc_line_starts` (int startLine, int endLine)
- Update the line start arrays.*
- void `clear_rect` (int style, int x, int y, int width, int height) const
- Clear a rectangle with the appropriate background color for `style`.*
- void `display_insert` ()
- Scroll the display to bring insertion cursor into view.*
- virtual void `draw` ()
- Draw the widget.*
- void `draw_cursor` (int, int)
- Draw a cursor with top center at X, Y.*
- void `draw_line_numbers` (bool clearAll)
- Refresh the line number area.*

- void `draw_range` (int start, int end)
 - Draw a range of text.*
- void `draw_string` (int style, int x, int y, int toX, const char *string, int nChars) const
 - Draw a text segment in a single style.*
- void `draw_text` (int X, int Y, int W, int H)
 - Refresh a rectangle of the text display.*
- void `draw_vline` (int visLineNum, int leftClip, int rightClip, int leftCharIndex, int rightCharIndex)
 - Draw a single line of text.*
- int `empty_vlines` () const
 - Return true if there are lines visible with no corresponding buffer text.*
- void `extend_range_for_styles` (int *start, int *end)
 - I don't know what this does!*
- void `find_line_end` (int pos, bool start_pos_is_line_start, int *lineEnd, int *nextLineStart) const
 - Finds both the end of the current line and the start of the next line.*
- void `find_wrap_range` (const char *deletedText, int pos, int nInserted, int nDeleted, int *modRangeStart, int *modRangeEnd, int *linesInserted, int *linesDeleted)
 - Wrapping calculations.*
- int `find_x` (const char *s, int len, int style, int x) const
 - Find the index of the character that lies at the given x position.*
- int `get_absolute_top_line_number` () const
 - Line numbering stuff, currently unused.*
- int `handle_vline` (int mode, int lineStart, int lineLen, int leftChar, int rightChar, int topClip, int bottomClip, int leftClip, int rightClip) const
 - Universal pixel machine.*
- int `longest_vline` () const
 - Find the longest line of all visible lines.*
- void `maintain_absolute_top_line_number` (int state)
 - Line numbering stuff, currently unused.*
- int `maintaining_absolute_top_line_number` () const
 - Line numbering stuff, currently unused.*
- void `measure_deleted_lines` (int pos, int nDeleted)
 - Wrapping calculations.*
- double `measure_proportional_character` (const char *s, int colNum, int pos) const
 - Wrapping calculations.*
- int `measure_vline` (int visLineNum) const
 - Returns the width in pixels of the displayed line pointed to by "visLineNum".*
- void `offset_line_starts` (int newTopLineNum)
 - Offset line start counters for a new vertical scroll position.*
- int `position_to_line` (int pos, int *lineNum) const
 - Convert a position index into a line number offset.*
- int `position_to_linecol` (int pos, int *lineNum, int *column) const
 - Find the line and column number of position pos.*
- void `reset_absolute_top_line_number` ()
 - Line numbering stuff, probably unused.*
- int `scroll_` (int topLineNum, int horizOffset)
 - Scrolls the current buffer to start at the specified line and column.*
- double `string_width` (const char *string, int length, int style) const
 - Find the width of a string in the font of a particular style.*
- void `update_h_scrollbar` ()
 - Update horizontal scrollbar.*

- void [update_line_starts](#) (int pos, int charsInserted, int charsDeleted, int linesInserted, int linesDeleted, int *scrolled)
Update line start arrays and variables.
- void [update_v_scrollbar](#) ()
Update vertical scrollbar.
- int [vline_length](#) (int visLineNum) const
Count number of bytes in a visible line.
- int [wrap_uses_character](#) (int lineEndPos) const
Check if the line break is caused by a \n or by line wrapping.
- void [wrapped_line_counter](#) ([FI_Text_Buffer](#) *buf, int startPos, int maxPos, int maxLines, bool startPosIs↵LineStart, int styleBufOffset, int *retPos, int *retLines, int *retLineStart, int *retLineEnd, bool countLast↵LineMissingNewLine=true) const
Wrapping calculations.
- int [xy_to_position](#) (int x, int y, int PosType=CHARACTER_POS) const
Translate a pixel position into a character index.
- void [xy_to_rowcol](#) (int x, int y, int *row, int *column, int PosType=CHARACTER_POS) const
Translate pixel coordinates into row and column.

Protected Member Functions inherited from [FI_Group](#)

- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)

- Creates a widget at the given position and size.*
- unsigned int **flags** () const
 - Gets the widget flags mask.*
- void **h** (int v)
 - Internal use only.*
- void **set_flag** (unsigned int c)
 - Sets a flag in the flags mask.*
- void **w** (int v)
 - Internal use only.*
- void **x** (int v)
 - Internal use only.*
- void **y** (int v)
 - Internal use only.*

Static Protected Attributes

- static [Key_Binding](#) * **global_key_bindings**
 - Global key binding list.*

9.136.1 Detailed Description

This is the FLTK text editor widget.

It allows the user to edit multiple lines of text and supports highlighting and scrolling. The buffer that is displayed in the widget is managed by the [Fl_Text_Buffer](#) class.

9.136.2 Member Function Documentation

9.136.2.1 add_key_binding()

```
void Fl_Text_Editor::add_key_binding (
    int key,
    int state,
    Key_Func function,
    Key_Binding ** list )
```

Adds a key of state *state* with the function *function* to an arbitrary key binding list *list*.

This can be used in derived classes to add global key bindings by using the global (static) [Key_Binding](#) list [Fl_Text_Editor::global_key_bindings](#).

9.136.2.2 handle()

```
int Fl_Text_Editor::handle (
    int e ) [virtual]
```

Event handling.

Reimplemented from [Fl_Text_Display](#).

9.136.2.3 insert_mode() [1/2]

```
int Fl_Text_Editor::insert_mode ( ) [inline]
```

Gets the current insert mode; if non-zero, new text is inserted before the current cursor position. Otherwise, new text replaces text at the current cursor position.

9.136.2.4 insert_mode() [2/2]

```
void Fl_Text_Editor::insert_mode (
    int b ) [inline]
```

Sets the current insert mode; if non-zero, new text is inserted before the current cursor position. Otherwise, new text replaces text at the current cursor position.

9.136.2.5 kf_backspace()

```
int Fl_Text_Editor::kf_backspace (
    int c,
    Fl_Text_Editor * e ) [static]
```

Does a backspace for key 'c' in the current buffer of editor 'e'.

Any current selection is deleted. Otherwise, the character left is deleted and the cursor moved. The key value 'c' is currently unused.

9.136.2.6 kf_c_s_move()

```
int Fl_Text_Editor::kf_c_s_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Extends the current selection in the direction indicated by control key 'c' in editor 'e'.

See also

[kf_ctrl_move\(\)](#).

9.136.2.7 kf_copy()

```
int Fl_Text_Editor::kf_copy (
    int c,
    Fl_Text_Editor * e ) [static]
```

Does a copy of selected text or the current character in the current buffer of editor 'e'.
The key value 'c' is currently unused.

9.136.2.8 kf_ctrl_move()

```
int Fl_Text_Editor::kf_ctrl_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the current text cursor in the direction indicated by control key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Home    -- moves the cursor to the beginning of the document
FL_End     -- moves the cursor to the end of the document
FL_Left    -- moves the cursor left one word
FL_Right   -- moves the cursor right one word
FL_Up      -- scrolls up one line, without moving cursor
FL_Down    -- scrolls down one line, without moving cursor
FL_Page_Up -- moves the cursor to the beginning of the top line on the current page
FL_Page_Down -- moves the cursor to the beginning of the last line on the current page
```

9.136.2.9 kf_cut()

```
int Fl_Text_Editor::kf_cut (
    int c,
    Fl_Text_Editor * e ) [static]
```

Does a cut of selected text in the current buffer of editor 'e'.

The key value 'c' is currently unused.

9.136.2.10 kf_default()

```
int Fl_Text_Editor::kf_default (
    int c,
    Fl_Text_Editor * e ) [static]
```

Inserts the text associated with key 'c' in editor 'e'.

Honors the current selection and insert/overstrike mode.

9.136.2.11 kf_delete()

```
int Fl_Text_Editor::kf_delete (
    int c,
    Fl_Text_Editor * e ) [static]
```

Does a delete of selected text or the current character in the current buffer of editor 'e'.

The key value 'c' is currently unused.

9.136.2.12 kf_down()

```
int Fl_Text_Editor::kf_down (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor one line down for editor 'e'.

Same as `kf_move(FL_Down, e)`. The key value 'c' is currently unused.

9.136.2.13 kf_end()

```
int Fl_Text_Editor::kf_end (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor to the end of the current line in editor 'e'.

Same as `kf_move(FL_End, e)`. The key value 'c' is currently unused.

9.136.2.14 kf_enter()

```
int Fl_Text_Editor::kf_enter (
    int c,
    Fl_Text_Editor * e ) [static]
```

Inserts a newline for key 'c' at the current cursor position in editor 'e'.

The key value 'c' is currently unused.

9.136.2.15 kf_home()

```
int Fl_Text_Editor::kf_home (
    int ,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor to the beginning of the current line in editor 'e'.

Same as `kf_move(FL_Home, e)`. The key value 'c' is currently unused.

9.136.2.16 kf_ignore()

```
int Fl_Text_Editor::kf_ignore (
    int c,
    Fl_Text_Editor * e ) [static]
```

Ignores the key 'c' in editor 'e'.

This method can be used as a keyboard binding to disable a key that might otherwise be handled or entered as text.

An example would be disabling `FL_Escape`, so that it isn't added to the buffer when invoked by the user.

9.136.2.17 kf_insert()

```
int Fl_Text_Editor::kf_insert (
    int c,
    Fl_Text_Editor * e ) [static]
```

Toggles the insert mode for editor 'e'.

The key value 'c' is currently unused.

9.136.2.18 kf_left()

```
int Fl_Text_Editor::kf_left (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor one character to the left in editor 'e'.

Same as `kf_move(FL_Left, e)`. The key value 'c' is currently unused.

9.136.2.19 kf_m_s_move()

```
int Fl_Text_Editor::kf_m_s_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Extends the current selection in the direction indicated by meta key 'c' in editor 'e'.

See also

[kf_meta_move\(\)](#).

9.136.2.20 kf_meta_move()

```
int Fl_Text_Editor::kf_meta_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the current text cursor in the direction indicated by meta key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Up      -- moves cursor to the beginning of the current document
FL_Down    -- moves cursor to the end of the current document
FL_Left    -- moves the cursor to the beginning of the current line
FL_Right   -- moves the cursor to the end of the current line
```

9.136.2.21 kf_move()

```
int Fl_Text_Editor::kf_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor in the direction indicated by key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Home    -- moves the cursor to the beginning of the current line
FL_End     -- moves the cursor to the end of the current line
FL_Left    -- moves the cursor left one character
FL_Right   -- moves the cursor right one character
FL_Up      -- moves the cursor up one line
FL_Down    -- moves the cursor down one line
FL_Page_Up -- moves the cursor up one page
FL_Page_Down -- moves the cursor down one page
```

9.136.2.22 kf_page_down()

```
int Fl_Text_Editor::kf_page_down (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor down one page for editor 'e'.

Same as `kf_move(FL_Page_Down, e)`. The key value 'c' is currently unused.

9.136.2.23 kf_page_up()

```
int Fl_Text_Editor::kf_page_up (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor up one page for editor 'e'.

Same as `kf_move(FL_Page_Up, e)`. The key value 'c' is currently unused.

9.136.2.24 kf_paste()

```
int Fl_Text_Editor::kf_paste (
    int c,
    Fl_Text_Editor * e ) [static]
```

Does a paste of selected text in the current buffer of editor 'e'.

Any current selection is replaced with the pasted content. The key value 'c' is currently unused.

9.136.2.25 kf_right()

```
int Fl_Text_Editor::kf_right (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor one character to the right for editor 'e'.
Same as `kf_move(FL_Right, e)`. The key value 'c' is currently unused.

9.136.2.26 kf_select_all()

```
int Fl_Text_Editor::kf_select_all (
    int c,
    Fl_Text_Editor * e ) [static]
```

Selects all text in the current buffer in editor 'e'.
The key value 'c' is currently unused.

9.136.2.27 kf_shift_move()

```
int Fl_Text_Editor::kf_shift_move (
    int c,
    Fl_Text_Editor * e ) [static]
```

Extends the current selection in the direction of key 'c' in editor 'e'.

See also

[kf_move\(\)](#)

9.136.2.28 kf_undo()

```
int Fl_Text_Editor::kf_undo (
    int c,
    Fl_Text_Editor * e ) [static]
```

Undo last edit in the current buffer of editor 'e'.
Also deselects previous selection. The key value 'c' is currently unused.

9.136.2.29 kf_up()

```
int Fl_Text_Editor::kf_up (
    int c,
    Fl_Text_Editor * e ) [static]
```

Moves the text cursor one line up for editor 'e'.
Same as `kf_move(FL_Up, e)`. The key value 'c' is currently unused.

9.136.2.30 remove_key_binding()

```
void Fl_Text_Editor::remove_key_binding (
    int key,
    int state,
    Key_Binding ** list )
```

Removes the key binding associated with the key `key` of state `state` from the [Key_Binding](#) list `list`.
This can be used in derived classes to remove global key bindings by using the global (static) [Key_Binding](#) list `Fl_Text_Editor::global_key_bindings`.

9.136.2.31 tab_nav() [1/2]

```
int Fl_Text_Editor::tab_nav ( ) const
```

Check if Tab focus navigation is enabled.

If disabled (default), hitting Tab inserts a tab character into the editor buffer.

If enabled, hitting Tab navigates focus to the next widget, and Shift-Tab navigates focus to the previous widget.

Returns

if Tab inserts tab characters or moves the focus

Return values

0	Tab inserts tab characters (default)
1	Tab navigation is enabled.

See also

[tab_nav\(int\), Fl::OPTION_ARROW_FOCUS.](#)

Version

1.3.4 ABI feature

9.136.2.32 tab_nav() [2/2]

```
void Fl_Text_Editor::tab_nav (
    int val )
```

Enables or disables Tab key focus navigation.

When disabled (default), tab characters are inserted into [Fl_Text_Editor](#). Only the mouse can change focus. This behavior is desirable when [Fl_Text_Editor](#) is used, e.g. in a source code editor.

When enabled, Tab navigates focus to the next widget, and Shift-Tab navigates focus to the previous widget. This behavior is desirable when [Fl_Text_Editor](#) is used e.g. in a database input form.

Currently, this method is implemented as a convenience method that adjusts the key bindings for the Tab key. This implementation detail may change in the future. Know that changing the editor's key bindings for Tab and Shift-Tab may affect tab navigation.

Parameters

in	val	If val is 0, Tab inserts a tab character (default). If val is 1, Tab navigates widget focus.
----	-----	---

9.136.3 Member Data Documentation**9.136.3.1 global_key_bindings**

```
Key_Binding* Fl_Text_Editor::global_key_bindings [static], [protected]
```

Global key binding list.

Derived classes can add key bindings for all [Fl_Text_Editor](#) widgets by adding a [Key_Binding](#) to this list.

See also

[add_key_binding\(int key, int state, Key_Func f, Key_Binding** list\);](#)

The documentation for this class was generated from the following files:

- [Fl_Text_Editor.H](#)
- [Fl_Text_Editor.cxx](#)

9.137 Fl_Text_Selection Class Reference

This is an internal class for [Fl_Text_Buffer](#) to manage text selections.

```
#include <Fl_Text_Buffer.H>
```

Public Member Functions

- int [end](#) () const
Return the byte offset to the character after the last selected character.
- int [includes](#) (int pos) const
Return true if position pos with indentation dispIndex is in the Fl_Text_Selection.
- int [position](#) (int *start, int *end) const
Return the positions of this selection.
- bool [selected](#) () const
Returns true if any text is selected.
- void [selected](#) (bool b)
Modify the 'selected' flag.
- void [set](#) (int start, int end)
Set the selection range.
- int [start](#) () const
Return the byte offset to the first selected character.
- void [update](#) (int pos, int nDeleted, int nInserted)
Updates a selection after text was modified.

Protected Attributes

- int **mEnd**
byte offset to the character after the last selected character
- bool **mSelected**
this flag is set if any text is selected
- int **mStart**
byte offset to the first selected character

Friends

- class [Fl_Text_Buffer](#)

9.137.1 Detailed Description

This is an internal class for [Fl_Text_Buffer](#) to manage text selections.

This class works correctly with UTF-8 strings assuming that the parameters for all calls are on character boundaries.

9.137.2 Member Function Documentation

9.137.2.1 end()

```
int Fl_Text_Selection::end ( ) const [inline]
```

Return the byte offset to the character after the last selected character.

Returns

byte offset

9.137.2.2 position()

```
int Fl_Text_Selection::position (  
    int * start,  
    int * end ) const
```

Return the positions of this selection.

Parameters

<i>start</i>	return byte offset to first selected character
<i>end</i>	return byte offset pointing after last selected character

Returns

true if selected

9.137.2.3 selected() [1/2]

```
bool Fl_Text_Selection::selected ( ) const [inline]
```

Returns true if any text is selected.

Returns

a non-zero number if any text has been selected, or 0 if no text is selected.

9.137.2.4 selected() [2/2]

```
void Fl_Text_Selection::selected (
    bool b ) [inline]
```

Modify the 'selected' flag.

Parameters

<i>b</i>	new flag
----------	----------

9.137.2.5 set()

```
void Fl_Text_Selection::set (
    int start,
    int end )
```

Set the selection range.

Parameters

<i>start</i>	byte offset to first selected character
<i>end</i>	byte offset pointing after last selected character

9.137.2.6 start()

```
int Fl_Text_Selection::start ( ) const [inline]
```

Return the byte offset to the first selected character.

Returns

byte offset

9.137.2.7 update()

```
void Fl_Text_Selection::update (
    int pos,
    int nDeleted,
    int nInserted )
```

Updates a selection after text was modified.
 Updates an individual selection for changes in the corresponding text

Parameters

<i>pos</i>	byte offset into text buffer at which the change occurred
<i>nDeleted</i>	number of bytes deleted from the buffer
<i>nInserted</i>	number of bytes inserted into the buffer

The documentation for this class was generated from the following files:

- FI_Text_Buffer.H
- FI_Text_Buffer.cxx

9.138 FI_Tile Class Reference

The [FI_Tile](#) class lets you resize its children by dragging the border between them.
 Inheritance diagram for [FI_Tile](#):

Public Member Functions

- [FI_Tile](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FI_Tile](#) widget using the given position, size, and label string.
- int [handle](#) (int event)
Handles the specified event.
- void [position](#) (int oldx, int oldy, int newx, int newy)
Drags the intersection at (oldx,oldy) to (newx,newy).
- void [resize](#) (int X, int Y, int W, int H)
Resizes the [FI_Tile](#) widget and its children.

Public Member Functions inherited from [FI_Group](#)

- [FI_Widget](#) *& [_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FI_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FI_Widget](#) *o)
See void [FI_Group::add\(FI_Widget &w\)](#)
- void [add_resizable](#) ([FI_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FI_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- void [begin](#) ()

- Sets the current group so you can build the widget tree by just constructing the widgets.*
- `FI_Widget * child (int n) const`
 - Returns array()[n].*
- `int children () const`
 - Returns how many child widgets the group has.*
- `void clear ()`
 - Deletes all child widgets from memory recursively.*
- `unsigned int clip_children ()`
 - Returns the current clipping mode.*
- `void clip_children (int c)`
 - Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- `void end ()`
 - Exactly the same as `current(this->parent())`.*
- `int find (const FI_Widget &o) const`
 - See `int FI_Group::find(const FI_Widget *w) const`.*
- `int find (const FI_Widget *) const`
 - Searches the child array for the widget and returns the index.*
- `FI_Group (int, int, int, int, const char *s=0)`
 - Creates a new `FI_Group` widget using the given position, size, and label string.*
- `void focus (FI_Widget *W)`
- `void forms_end ()`
 - This is for forms compatibility only.*
- `void init_sizes ()`
 - Resets the internal array of widget sizes and positions.*
- `void insert (FI_Widget &, int i)`
 - The widget is removed from its current group (if any) and then inserted into this group.*
- `void insert (FI_Widget &o, FI_Widget *before)`
 - This does `insert(w, find(before))`.*
- `void remove (FI_Widget &)`
 - Removes a widget from the group but does not delete it.*
- `void remove (FI_Widget *o)`
 - Removes the widget `o` from the group.*
- `void remove (int index)`
 - Removes the widget at `index` from the group but does not delete it.*
- `FI_Widget * resizable () const`
 - See `void FI_Group::resizable(FI_Widget *box)`*
- `void resizable (FI_Widget &o)`
 - See `void FI_Group::resizable(FI_Widget *box)`*
- `void resizable (FI_Widget *o)`
 - The resizable widget defines the resizing box for the group.*
- `virtual ~FI_Group ()`
 - The destructor also deletes all the children.*

Public Member Functions inherited from `FI_Widget`

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
 - Activates the widget.*
- `unsigned int active () const`
 - Returns whether the widget is active.*

- int `active_r` () const
Returns whether the widget and all of its parents are active.
- `FI_Align align` () const
Gets the label alignment.
- void `align` (`FI_Align alignment`)
Sets the label alignment.
- long `argument` () const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_GI_Window * as_gl_window` ()
Returns an `FI_GI_Window` pointer if this widget is an `FI_GI_Window`.
- virtual `FI_Window * as_window` ()
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype box` () const
Gets the box type of the widget.
- void `box` (`FI_Boxtype new_box`)
Sets the box type for the widget.
- `FI_Callback_p callback` () const
Gets the current callback function for the widget.
- void `callback` (`FI_Callback *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback *cb`, void *p)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0 *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1 *cb`, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color color` () const
Gets the background color of the widget.
- void `color` (`FI_Color bg`)
Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)
Sets the background and selection color of the widget.
- `FI_Color color2` () const
For back compatibility only.
- void `color2` (unsigned a)

- For back compatibility only.*

 - int `contains` (const `FL_Widget *w`) const
Checks if w is a child of this widget.
 - void `copy_label` (const char *new_label)
Sets the current label.
 - void `copy_tooltip` (const char *text)
Sets the current tooltip text.
 - `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
 - void `damage` (uchar c)
Sets the damage bits for the widget.
 - void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
 - int `damage_resize` (int, int, int, int)
Internal use only.
 - void `deactivate` ()
Deactivates the widget.
 - `FL_Image * deimage` ()
Gets the image that is used as part of the widget label.
 - const `FL_Image * deimage` () const
 - void `deimage` (`FL_Image &img`)
Sets the image to use as part of the widget label.
 - void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label.
 - void `do_callback` ()
Calls the widget callback.
 - void `do_callback` (`FL_Widget *o`, long arg)
Calls the widget callback.
 - void `do_callback` (`FL_Widget *o`, void *arg=0)
Calls the widget callback.
 - void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - int `h` () const
Gets the widget height.
 - virtual void `hide` ()
Makes a widget invisible.
 - `FL_Image * image` ()
Gets the image that is used as part of the widget label.
 - const `FL_Image * image` () const
 - void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label.
 - void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label.
 - int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
 - int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
 - const char * `label` () const
Gets the current label text.
 - void `label` (const char *text)
Sets the current label pointer.

- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()

- Gives the widget the keyboard focus.*

 - unsigned int `takeevents` () const

Returns if the widget is able to take events.
 - int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
 - const char * `tooltip` () const

Gets the current tooltip text.
 - void `tooltip` (const char *text)

Sets the current tooltip text.
 - `FI_Window` * `top_window` () const

Returns a pointer to the top-level window for the widget.
 - `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
 - `uchar` type () const

Gets the widget type.
 - void `type` (`uchar` t)

Sets the widget type.
 - int `use_accents_menu` ()

Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
 - void * `user_data` () const

Gets the user data for this widget.
 - void `user_data` (void *v)

Sets the user data for this widget.
 - unsigned int `visible` () const

Returns whether a widget is visible.
 - unsigned int `visible_focus` ()

Checks whether this widget has a visible focus.
 - void `visible_focus` (int v)

Modifies keyboard focus navigation.
 - int `visible_r` () const

Returns whether a widget and all its parents are visible.
 - int `w` () const

Gets the widget width.
 - `FI_When` `when` () const

Returns the conditions under which the callback is called.
 - void `when` (`uchar` i)

Sets the flags used to decide when a callback is called.
 - `FI_Window` * `window` () const

Returns a pointer to the nearest parent window up the widget hierarchy.
 - int `x` () const

Gets the widget position in its window.
 - int `y` () const

Gets the widget position in its window.
 - virtual `~FI_Widget` ()

Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group` * `current` ()

Returns the currently active group.
- static void `current` (`FI_Group` *g)

Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
,
[OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
,
[MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
,
[GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 , [USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Group](#)

- void [draw](#) ()
Draws the widget.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If [FL_ALIGN_IMAGE_BACKDROP](#) is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) ()
draws a focus rectangle around the widget
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h) const

- Draws a focus box for the widget at the given position and size.*

 - void `draw_label` () const

Draws the widget's label at the defined label position.

 - void `draw_label` (int, int, int, int) const

Draws the label in an arbitrary bounding box.

 - `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label=0L`)

Creates a widget at the given position and size.

 - unsigned int `flags` () const

Gets the widget flags mask.

 - void `h` (int `v`)

Internal use only.

 - void `set_flag` (unsigned int `c`)

Sets a flag in the flags mask.

 - void `w` (int `v`)

Internal use only.

 - void `x` (int `v`)

Internal use only.

 - void `y` (int `v`)

Internal use only.

9.138.1 Detailed Description

The `FI_Tile` class lets you resize its children by dragging the border between them.

Figure 9.43 `FI_Tile`

For the tiling to work correctly, the children of an `FI_Tile` must cover the entire area of the widget, but not overlap. This means that all children must touch each other at their edges, and no gaps can be left inside the `FI_Tile`.

`FI_Tile` does not normally draw any graphics of its own. The "borders" which can be seen in the snapshot above are actually part of the children. Their boxtypes have been set to `FL_DOWN_BOX` creating the impression of "ridges" where the boxes touch. What you see are actually two adjacent `FL_DOWN_BOX`'s drawn next to each other. All neighboring widgets share the same edge - the widget's thick borders make it appear as though the widgets aren't actually touching, but they are. If the edges of adjacent widgets do not touch, then it will be impossible to drag the corresponding edges.

`FI_Tile` allows objects to be resized to zero dimensions. To prevent this you can use the `resizable()` to limit where corners can be dragged to. For more information see note below.

Even though objects can be resized to zero sizes, they must initially have non-zero sizes so the `FI_Tile` can figure out their layout. If desired, call `position()` after creating the children but before displaying the window to set the borders where you want.

Note on `resizable(FI_Widget &w)`: The "resizable" child widget (which should be invisible) limits where the borders can be dragged to. All dragging will be limited inside the resizable widget's borders. If you don't set it, it will be possible to drag the borders right to the edges of the `FI_Tile` widget, and thus resize objects on the edges to zero width or height. When the entire `FI_Tile` widget is resized, the `resizable()` widget will keep its border distance

to all borders the same (this is normal resize behavior), so that you can effectively set a border width that will never change. To ensure correct event delivery to all child widgets the `resizable()` widget must be the first child of the `Fl_Tile` widget group. Otherwise some events (e.g. `FL_MOVE` and `FL_ENTER`) might be consumed by the `resizable()` widget so that they are lost for widgets covered (overlapped) by the `resizable()` widget.

Note

You can still resize widgets **inside** the `resizable()` to zero width and/or height, i.e. box **2b** above to zero width and box **3a** to zero height.

See also

void [Fl_Group::resizable\(Fl_Widget &w\)](#)

Example for resizable with 20 pixel border distance:

```
int dx = 20, dy = dx;
Fl_Tile tile(50,50,300,300);
// create resizable() box first
Fl_Box r(tile.x()+dx,tile.y()+dy,tile.w()-2*dx,tile.h()-2*dy);
tile.resizable(r);
// ... create widgets inside tile (see test/tile.cxx) ...
tile.end();
```

See also the complete example program in `test/tile.cxx`.

9.138.2 Constructor & Destructor Documentation

9.138.2.1 Fl_Tile()

```
Fl_Tile::Fl_Tile (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new `Fl_Tile` widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the `Fl_Tile` and all of its children can be automatic (local) variables, but you must declare the `Fl_Tile` *first*, so that it is destroyed last.

class [Fl_Group](#)

9.138.3 Member Function Documentation

9.138.3.1 handle()

```
int Fl_Tile::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
---	---

Return values

1	if the event was used and can be deleted
---	--

See also

[FI_Event](#)

Reimplemented from [FI_Group](#).

9.138.3.2 position()

```
void Fl_Tile::position (
    int oldx,
    int oldy,
    int newx,
    int newy )
```

Drags the intersection at (oldx,oldy) to (newx,newy).

This redraws all the necessary children.

Pass zero as oldx or oldy to disable drag in that direction.

9.138.3.3 resize()

```
void Fl_Tile::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Resizes the [FI_Tile](#) widget and its children.

[FI_Tile](#) implements its own [resize\(\)](#) method. It does not use [FI_Group::resize\(\)](#) to resize itself and its children.

Enlarging works by just moving the lower-right corner and resizing the bottom and right border widgets accordingly. Shrinking the [FI_Tile](#) works in the opposite way by shrinking the bottom and right border widgets, unless they are reduced to zero width or height, resp. or to their minimal sizes defined by the [resizable\(\)](#) widget. In this case other widgets will be shrunk as well.

See the [FI_Tile](#) class documentation about how the [resizable\(\)](#) works.

Reimplemented from [FI_Group](#).

The documentation for this class was generated from the following files:

9.139 FI_Tiled_Image Class Reference

This class supports tiling of images over a specified area.

```
#include <Fl_Tiled_Image.H>
```

Inheritance diagram for [FI_Tiled_Image](#):

**Public Member Functions**

- virtual void [color_average](#) ([FI_Color](#) c, float i)

The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.

- [FI_Image](#) * **copy** ()
- virtual [FI_Image](#) * **copy** (int W, int H)
The copy() method creates a copy of the specified image.
- virtual void **desaturate** ()
The desaturate() method converts an image to grayscale.
- void **draw** (int X, int Y)
- virtual void **draw** (int X, int Y, int W, int H, int cx, int cy)
Draws a tiled image.
- [FI_Tiled_Image](#) ([FI_Image](#) *i, int W=0, int H=0)
The constructors create a new tiled image containing the specified image.
- [FI_Image](#) * **image** ()
Gets The image that is tiled.
- virtual ~[FI_Tiled_Image](#) ()
The destructor frees all memory and server resources that are used by the tiled image.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * **copy** ()
The copy() method creates a copy of the specified image.
- int **count** () const
The count() method returns the number of data values associated with the image.
- int **d** () const
Returns the current image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- void **draw** (int X, int Y)
Draws the image.
- int **fail** ()
Returns a value that is not 0 if there is currently no image available.
- [FI_Image](#) (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image height in pixels.
- void **inactive** ()
The inactive() method calls color_average(FL_BACKGROUND_COLOR, 0.33f) to produce an image that appears grayed out.
- virtual void **label** ([FI_Menu_Item](#) *m)
The label() methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void **label** ([FI_Widget](#) *w)
The label() methods are an obsolete way to set the image attribute of a widget or menu item.
- int **ld** () const
Returns the current line data size in bytes.
- virtual void **uncache** ()
If the image has been cached for display, delete the cache data.
- int **w** () const
Returns the current image width in pixels.
- virtual ~[FI_Image](#) ()
The destructor is a virtual method that frees all memory used by the image.

Protected Attributes

- int **alloc_image_**
- [FI_Image](#) * **image_**

Additional Inherited Members

Static Public Member Functions inherited from FI_Image

- static [FI_RGB_Scaling](#) **RGB_scaling** ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for `copy(int, int)`.

Static Public Attributes inherited from FI_Image

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_NO_IMAGE** = -1

Protected Member Functions inherited from FI_Image

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void [draw_empty](#) (int X, int Y)
The protected method `draw_empty()` draws a box with an X in it.
- void **h** (int H)
Sets the current image height in pixels.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the current image width in pixels.

Static Protected Member Functions inherited from FI_Image

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

9.139.1 Detailed Description

This class supports tiling of images over a specified area.

The source (tile) image is **not** copied unless you call the [color_average\(\)](#), [desaturate\(\)](#), or [inactive\(\)](#) methods.

9.139.2 Constructor & Destructor Documentation

9.139.2.1 FI_Tiled_Image()

```
FI_Tiled_Image::FI_Tiled_Image (
    FI_Image * i,
    int W = 0,
    int H = 0 )
```

The constructors create a new tiled image containing the specified image.

Use a width and height of 0 to tile the whole window/widget.

Note

Due to implementation constraints in FLTK 1.3.3 and later width and height of 0 may not work as expected when used as background image in widgets other than windows. You may need to center and clip the image (label) and set the label type to `FL_NORMAL_LABEL`. Doing so will let the tiled image fill the whole widget as its background image. Other combinations of label flags may or may not work.

```
#include "bg.xpm"
Fl_Pixmap *bg_xpm = new Fl_Pixmap(bg_xpm);
Fl_Tiled_Image *bg_tiled = new Fl_Tiled_Image(bg_xpm,0,0);

Fl_Box *box = new Fl_Box(40,40,300,100,"");
box->box(FL_UP_BOX);
box->labeltype(FL_NORMAL_LABEL);
box->align(FL_ALIGN_INSIDE | FL_ALIGN_CENTER | FL_ALIGN_CLIP);
box->image(bg_tiled);
```

Note

Setting an image (label) for a window may not work as expected due to implementation constraints in FLTK 1.3.x and maybe later. The reason is the way `Fl::scheme()` initializes the window's label type and image. A possible workaround is to use another `Fl_Group` as the only child widget and to set the background image for this group as described above.

Todo Fix `Fl_Tiled_Image` as background image for widgets and windows and fix the implementation of `Fl::scheme(const char *)`.

9.139.3 Member Function Documentation**9.139.3.1 color_average()**

```
void Fl_Tiled_Image::color_average (
    Fl_Color c,
    float i ) [virtual]
```

The `color_average()` method averages the colors in the image with the FLTK color value `c`.

The `i` argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from `Fl_Image`.

9.139.3.2 copy()

```
Fl_Image * Fl_Tiled_Image::copy (
    int W,
    int H ) [virtual]
```

The `copy()` method creates a copy of the specified image.

If the width and height are provided, the image is resized to the specified size. The image should be deleted (or in the case of `Fl_Shared_Image`, released) when you are done with it.

Reimplemented from `Fl_Image`.

9.139.3.3 desaturate()

```
void Fl_Tiled_Image::desaturate ( ) [virtual]
```

The `desaturate()` method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Reimplemented from `Fl_Image`.

9.139.3.4 draw()

```
void Fl_Tiled_Image::draw (
    int X,
    int Y,
    int W,
```

```

    int H,
    int cx,
    int cy ) [virtual]

```

Draws a tiled image.

Tiled images can be used as background images for widgets and windows. However, due to implementation constraints, you must take care when setting label types and alignment flags. Only certain combinations work as expected, others may yield unexpected results and undefined behavior.

This draw method can draw multiple copies of one image in an area given by X, Y, W, H.

The optional arguments `cx` and `cy` can be used to crop the image starting at offsets (cx, cy). `cx` and `cy` must be ≥ 0 (negative values are ignored). If one of the values is greater than the image width or height resp. (`cx` \geq `image()->w()` or `cy` \geq `image()->h()`) nothing is drawn, because the resulting image would be empty.

After calculating the resulting image size the image is drawn as often as necessary to fill the given area, starting at the top left corner.

If both W and H are 0 the image is repeated as often as necessary to fill the entire window, unless there is a valid clip region. If you want to fill only one particular widget's background, then you should either set a clip region in your `draw()` method or use the label alignment flags `FL_ALIGN_INSIDE|FL_ALIGN_CLIP` to make sure the image is clipped.

This may be improved in a later version of the library.

Reimplemented from [Fl_Image](#).

- `Fl_Tiled_Image.H`
- `Fl_Tiled_Image.cxx`

9.140 Fl_Timer Class Reference

This is provided only to emulate the Forms Timer widget.

```
#include <Fl_Timer.H>
```

Inheritance diagram for `Fl_Timer`:

Public Member Functions

- char `direction` () const
Gets or sets the direction of the timer.
- void `direction` (char d)
Gets or sets the direction of the timer.
- `Fl_Timer` (uchar t, int x, int y, int w, int h, const char *l)
Creates a new `Fl_Timer` widget using the given type, position, size, and label string.
- int `handle` (int)
Handles the specified event.
- char `suspended` () const
Gets or sets whether the timer is suspended.
- void `suspended` (char d)
Gets or sets whether the timer is suspended.
- double `value` () const
See void `Fl_Timer::value(double)`
- void `value` (double)
Sets the current timer value.

- `~FI_Timer ()`
Destroys the timer and removes the timeout.

Public Member Functions inherited from `FI_Widget`

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
Activates the widget.
- `unsigned int active () const`
Returns whether the widget is active.
- `int active_r () const`
Returns whether the widget and all of its parents are active.
- `FI_Align align () const`
Gets the label alignment.
- `void align (FI_Align alignment)`
Sets the label alignment.
- `long argument () const`
Gets the current user data (long) argument that is passed to the callback function.
- `void argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.
- `virtual class FI_GI_Window * as_gl_window ()`
Returns an `FI_GI_Window` pointer if this widget is an `FI_GI_Window`.
- `virtual FI_Group * as_group ()`
Returns an `FI_Group` pointer if this widget is an `FI_Group`.
- `virtual FI_Window * as_window ()`
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype box () const`
Gets the box type of the widget.
- `void box (FI_Boxtype new_box)`
Sets the box type for the widget.
- `FI_Callback_p callback () const`
Gets the current callback function for the widget.
- `void callback (FI_Callback *cb)`
Sets the current callback function for the widget.
- `void callback (FI_Callback *cb, void *p)`
Sets the current callback function for the widget.
- `void callback (FI_Callback0 *cb)`
Sets the current callback function for the widget.
- `void callback (FI_Callback1 *cb, long p=0)`
Sets the current callback function for the widget.
- `unsigned int changed () const`
Checks if the widget value changed since the last callback.
- `void clear_active ()`
Marks the widget as inactive without sending events or changing focus.
- `void clear_changed ()`
Marks the value of the widget as unchanged.
- `void clear_damage (uchar c=0)`
Clears or sets the damage flags.
- `void clear_output ()`
Sets a widget to accept input.

- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FL_Color` bg)
Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `deimage` () const
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label.

- const [FI_Image](#) * **image** () const
- void [image](#) ([FI_Image](#) &img)
Sets the image to use as part of the widget label.
- void [image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label.
- int [inside](#) (const [FI_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FI_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- [FI_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FI_Color](#) c)
Sets the label color.
- [FI_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
Sets the font to use.
- [FI_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FI_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.

- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` i)

- Sets the flags used to decide when a callback is called.*
- `FL_Window * window () const`

Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`

Gets the widget position in its window.
- `int y () const`

Gets the widget position in its window.
- `virtual ~FL_Widget ()`

Destroys the widget.

Protected Member Functions

- `void draw ()`

Draws the widget.

Protected Member Functions inherited from `FL_Widget`

- `void clear_flag (unsigned int c)`

Clears a flag in the flags mask.
- `void draw_backdrop () const`

If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- `void draw_box () const`

Draws the widget box according its box style.
- `void draw_box (FL_Boxtype t, FL_Color c) const`

Draws a box of type `t`, of color `c` at the widget's position and size.
- `void draw_box (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const`

Draws a box of type `t`, of color `c` at the position `X,Y` and size `W,H`.
- `void draw_focus ()`

draws a focus rectangle around the widget
- `void draw_focus (FL_Boxtype t, int x, int y, int w, int h) const`

Draws a focus box for the widget at the given position and size.
- `void draw_label () const`

Draws the widget's label at the defined label position.
- `void draw_label (int, int, int, int) const`

Draws the label in an arbitrary bounding box.
- `FL_Widget (int x, int y, int w, int h, const char *label=0L)`

Creates a widget at the given position and size.
- `unsigned int flags () const`

Gets the widget flags mask.
- `void h (int v)`

Internal use only.
- `void set_flag (unsigned int c)`

Sets a flag in the flags mask.
- `void w (int v)`

Internal use only.
- `void x (int v)`

Internal use only.
- `void y (int v)`

Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from Fl_Widget

- static void `default_callback` (`Fl_Widget *cb`, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from Fl_Widget

- enum {
`INACTIVE = 1<<0` , `INVISIBLE = 1<<1` , `OUTPUT = 1<<2` , `NOBORDER = 1<<3` ,
`FORCE_POSITION = 1<<4` , `NON_MODAL = 1<<5` , `SHORTCUT_LABEL = 1<<6` , `CHANGED = 1<<7`
, `OVERRIDE = 1<<8` , `VISIBLE_FOCUS = 1<<9` , `COPIED_LABEL = 1<<10` , `CLIP_CHILDREN = 1<<11`
, `MENU_WINDOW = 1<<12` , `TOOLTIP_WINDOW = 1<<13` , `MODAL = 1<<14` , `NO_OVERLAY = 1<<15`
, `GROUP_RELATIVE = 1<<16` , `COPIED_TOOLTIP = 1<<17` , `FULLSCREEN = 1<<18` , `MAC_USE_ACCENTS_MENU = 1<<19` ,
`USERFLAG3 = 1<<29` , `USERFLAG2 = 1<<30` , `USERFLAG1 = 1<<31` }
flags possible values enumeration.

9.140.1 Detailed Description

This is provided only to emulate the Forms Timer widget.

It works by making a timeout callback every 1/5 second. This is wasteful and inaccurate if you just want something to happen a fixed time in the future. You should directly call `Fl::add_timeout()` instead.

9.140.2 Constructor & Destructor Documentation

9.140.2.1 Fl_Timer()

```
Fl_Timer::Fl_Timer (
    uchar t,
    int X,
    int Y,
    int W,
    int H,
    const char * l )
```

Creates a new `Fl_Timer` widget using the given type, position, size, and label string.

The type parameter can be any of the following symbolic constants:

- `FL_NORMAL_TIMER` - The timer just does the callback and displays the string "Timer" in the widget.
- `FL_VALUE_TIMER` - The timer does the callback and displays the current timer value in the widget.
- `FL_HIDDEN_TIMER` - The timer just does the callback and does not display anything.

9.140.3 Member Function Documentation

9.140.3.1 direction() [1/2]

```
char Fl_Timer::direction ( ) const [inline]
```

Gets or sets the direction of the timer.

If the direction is zero then the timer will count up, otherwise it will count down from the initial `value()`.

9.140.3.2 direction() [2/2]

```
void Fl_Timer::direction (
    char d ) [inline]
```

Gets or sets the direction of the timer.

If the direction is zero then the timer will count up, otherwise it will count down from the initial [value\(\)](#).

9.140.3.3 draw()

```
void Fl_Timer::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                         // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

9.140.3.4 handle()

```
int Fl_Timer::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

9.140.3.5 suspended()

```
char Fl_Timer::suspended ( ) const [inline]
```

Gets or sets whether the timer is suspended.

The documentation for this class was generated from the following files:

- [Fl_Timer.H](#)
- [forms_timer.cxx](#)

9.141 Fl_Toggle_Button Class Reference

The toggle button is a push button that needs to be clicked once to toggle on, and one more time to toggle off.

```
#include <Fl_Toggle_Button.H>
```

Inheritance diagram for Fl_Toggle_Button:

Public Member Functions

- [Fl_Toggle_Button](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Toggle_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as [value\(0\)](#).
- [Fl_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when [value\(\)](#) is non-zero.
- void [down_box](#) ([Fl_Boxtype](#) b)
Sets the down box type.
- [Fl_Color](#) [down_color](#) () const
(for backwards compatibility)
- void [down_color](#) (unsigned c)
(for backwards compatibility)
- [Fl_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- virtual int [handle](#) (int)
Handles the specified event.
- int [set](#) ()
Same as [value\(1\)](#).
- void [setonly](#) ()
Turns on this button and turns off all other radio buttons in the group (calling [value\(1\)](#) or [set\(\)](#) does not do this).
- int [shortcut](#) () const
Returns the current shortcut key for the button.
- void [shortcut](#) (const char *s)
(for backwards compatibility)
- void [shortcut](#) (int s)
Sets the shortcut key to s.
- char [value](#) () const
Returns the current value of the button (0 or 1).
- int [value](#) (int v)
Sets the current value of the button.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window * as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group * as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window * as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback *cb](#), void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0 *cb](#))
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1 *cb](#), long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar c=0](#))
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()

- Disables keyboard focus navigation with this widget.*

 - `Fl_Color color () const`
Gets the background color of the widget.
 - `void color (Fl_Color bg)`
Sets the background color of the widget.
 - `void color (Fl_Color bg, Fl_Color sel)`
Sets the background and selection color of the widget.
 - `Fl_Color color2 () const`
For back compatibility only.
 - `void color2 (unsigned a)`
For back compatibility only.
 - `int contains (const Fl_Widget *w) const`
Checks if w is a child of this widget.
 - `void copy_label (const char *new_label)`
Sets the current label.
 - `void copy_tooltip (const char *text)`
Sets the current tooltip text.
 - `uchar damage () const`
Returns non-zero if draw() needs to be called.
 - `void damage (uchar c)`
Sets the damage bits for the widget.
 - `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
 - `int damage_resize (int, int, int, int)`
Internal use only.
 - `void deactivate ()`
Deactivates the widget.
 - `Fl_Image * deimage ()`
Gets the image that is used as part of the widget label.
 - `const Fl_Image * deimage () const`
 - `void deimage (Fl_Image &img)`
Sets the image to use as part of the widget label.
 - `void deimage (Fl_Image *img)`
Sets the image to use as part of the widget label.
 - `void do_callback ()`
Calls the widget callback.
 - `void do_callback (Fl_Widget *o, long arg)`
Calls the widget callback.
 - `void do_callback (Fl_Widget *o, void *arg=0)`
Calls the widget callback.
 - `void draw_label (int, int, int, int, Fl_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - `int h () const`
Gets the widget height.
 - `virtual void hide ()`
Makes a widget invisible.
 - `Fl_Image * image ()`
Gets the image that is used as part of the widget label.
 - `const Fl_Image * image () const`
 - `void image (Fl_Image &img)`
Sets the image to use as part of the widget label.

- void `image` (`FI_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget *wgt`) const
Checks if this widget is a child of `wgt`.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color c`)
Sets the label color.
- `FI_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font f`)
Sets the font to use.
- `FI_Fonsize labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize pix`)
Sets the font size in pixels.
- `FI_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype a`)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width `ww` and height `hh` accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

- Marks the value of the widget as changed.*
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const
Gets the widget type.
- void `type` (`uchar` t)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar` i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.

- int `x ()` const
Gets the widget position in its window.
- int `y ()` const
Gets the widget position in its window.
- virtual `~FI_Widget ()`
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void `default_callback (FI_Widget *cb, void *d)`
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut (const char *t)`
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut (const char *, const bool require_alt=false)`
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
`INACTIVE = 1<<0` , `INVISIBLE = 1<<1` , `OUTPUT = 1<<2` , `NOBORDER = 1<<3` ,
`FORCE_POSITION = 1<<4` , `NON_MODAL = 1<<5` , `SHORTCUT_LABEL = 1<<6` , `CHANGED = 1<<7`
, `OVERRIDE = 1<<8` , `VISIBLE_FOCUS = 1<<9` , `COPIED_LABEL = 1<<10` , `CLIP_CHILDREN = 1<<11`
, `MENU_WINDOW = 1<<12` , `TOOLTIP_WINDOW = 1<<13` , `MODAL = 1<<14` , `NO_OVERLAY = 1<<15`
, `GROUP_RELATIVE = 1<<16` , `COPIED_TOOLTIP = 1<<17` , `FULLSCREEN = 1<<18` , `MAC_USE_ACCENTS_MENU = 1<<19` ,
`USERFLAG3 = 1<<29` , `USERFLAG2 = 1<<30` , `USERFLAG1 = 1<<31` }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Button](#)

- virtual void `draw ()`
Draws the widget.
- void `simulate_key_action ()`

Protected Member Functions inherited from [FI_Widget](#)

- void `clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- void `draw_backdrop ()` const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void `draw_box ()` const
Draws the widget box according its box style.
- void `draw_box (FI_Boxtype t, FI_Color c)` const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box (FI_Boxtype t, int x, int y, int w, int h, FI_Color c)` const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus ()`
draws a focus rectangle around the widget
- void `draw_focus (FI_Boxtype t, int x, int y, int w, int h)` const

- Draws a focus box for the widget at the given position and size.*

 - void `draw_label` () const

Draws the widget's label at the defined label position.

 - void `draw_label` (int, int, int, int) const

Draws the label in an arbitrary bounding box.

 - `Fl_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label=0L`)

Creates a widget at the given position and size.

 - unsigned int `flags` () const

Gets the widget flags mask.

 - void `h` (int `v`)

Internal use only.

 - void `set_flag` (unsigned int `c`)

Sets a flag in the flags mask.

 - void `w` (int `v`)

Internal use only.

 - void `x` (int `v`)

Internal use only.

 - void `y` (int `v`)

Internal use only.

Static Protected Member Functions inherited from `Fl_Button`

- static void `key_release_timeout` (void *)

Static Protected Attributes inherited from `Fl_Button`

- static `Fl_Widget_Tracker` * `key_release_tracker` = 0

9.141.1 Detailed Description

The toggle button is a push button that needs to be clicked once to toggle on, and one more time to toggle off.

The `Fl_Toggle_Button` subclass displays the "on" state by drawing a pushed-in button.

Buttons generate callbacks when they are clicked by the user. You control exactly when and how by changing the values for `type()` and `when()`.

9.141.2 Constructor & Destructor Documentation

9.141.2.1 `Fl_Toggle_Button()`

```
Fl_Toggle_Button::Fl_Toggle_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0 )
```

Creates a new `Fl_Toggle_Button` widget using the given position, size, and label string.

The constructor creates the button using the given position, size, and label.

The inherited destructor deletes the toggle button.

The Button `type()` is set to `FL_TOGGLE_BUTTON`.

Parameters

in	<code>X,Y,W,H</code>	position and size of the widget
in	<code>L</code>	widget label, default is no label

The documentation for this class was generated from the following files:

- `Fl_Toggle_Button.H`
- `Fl_Button.cxx`

9.142 Fl_Tooltip Class Reference

The `Fl_Tooltip` class provides tooltip support for all FLTK widgets.

```
#include <Fl_Tooltip.H>
```

Static Public Member Functions

- static `Fl_Color` `color` ()
Gets the background color for tooltips.
- static void `color` (`Fl_Color` c)
Sets the background color for tooltips.
- static `Fl_Widget *` `current` ()
Gets the current widget target.
- static void `current` (`Fl_Widget *`)
Sets the current widget target.
- static float `delay` ()
Gets the tooltip delay.
- static void `delay` (float f)
Sets the tooltip delay.
- static void `disable` ()
Same as `enable(0)`, disables tooltips on all widgets.
- static void `enable` (int b=1)
Enables tooltips on all widgets (or disables if b is false).
- static int `enabled` ()
Returns non-zero if tooltips are enabled.
- static void `enter_area` (`Fl_Widget *`w, int X, int Y, int W, int H, const char *tip)
You may be able to use this to provide tooltips for internal pieces of your widget.
- static `Fl_Font` `font` ()
Gets the typeface for the tooltip text.
- static void `font` (`Fl_Font` i)
Sets the typeface for the tooltip text.
- static float `hoverdelay` ()
Gets the tooltip hover delay, the delay between tooltips.
- static void `hoverdelay` (float f)
Sets the tooltip hover delay, the delay between tooltips.
- static int `margin_height` ()
Gets the amount of extra space above and below the tooltip's text.
- static void `margin_height` (int v)
Sets the amount of extra space above and below the tooltip's text.
- static int `margin_width` ()
Gets the amount of extra space left/right of the tooltip's text.
- static void `margin_width` (int v)
Sets the amount of extra space left/right of the tooltip's text.
- static `Fl_Fontsize` `size` ()
Gets the size of the tooltip text.
- static void `size` (`Fl_Fontsize` s)
Sets the size of the tooltip text.

- static `Fl_Color textcolor ()`
Gets the color of the text in the tooltip.
- static void `textcolor (Fl_Color c)`
Sets the color of the text in the tooltip.
- static int `wrap_width ()`
Gets the maximum width for tooltip's text before it word wraps.
- static void `wrap_width (int v)`
Sets the maximum width for tooltip's text before it word wraps.

Static Public Attributes

- static void(* `enter`)(Fl_Widget *w) = nothing
- static void(* `exit`)(Fl_Widget *w) = nothing

Friends

- void `Fl_Widget::copy_tooltip` (const char *)
- void `Fl_Widget::tooltip` (const char *)

9.142.1 Detailed Description

The `Fl_Tooltip` class provides tooltip support for all FLTK widgets. It contains only static methods.

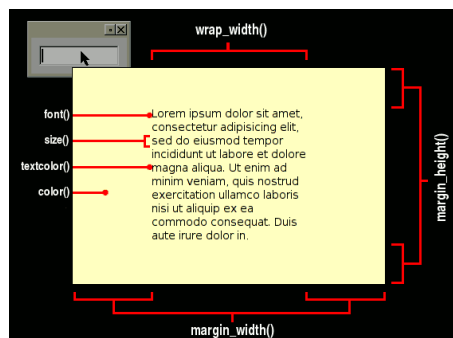

Figure 9.44 Fl_Tooltip Options

9.142.2 Member Function Documentation

9.142.2.1 color() [1/2]

```
static Fl_Color Fl_Tooltip::color ( ) [inline], [static]
```

Gets the background color for tooltips.

The default background color is a pale yellow.

9.142.2.2 color() [2/2]

```
static void Fl_Tooltip::color (
    Fl_Color c ) [inline], [static]
```

Sets the background color for tooltips.

The default background color is a pale yellow.

9.142.2.3 current()

```
void Fl_Tooltip::current (
    Fl_Widget * w ) [static]
```

Sets the current widget target.

Acts as though `enter(widget)` was done but does not pop up a tooltip. This is useful to prevent a tooltip from reappearing when a modal overlapping window is deleted. FLTK does this automatically when you click the mouse button.

9.142.2.4 delay() [1/2]

```
static float Fl_Tooltip::delay ( ) [inline], [static]
```

Gets the tooltip delay.

The default delay is 1.0 seconds.

9.142.2.5 delay() [2/2]

```
static void Fl_Tooltip::delay (
    float f ) [inline], [static]
```

Sets the tooltip delay.

The default delay is 1.0 seconds.

9.142.2.6 disable()

```
static void Fl_Tooltip::disable ( ) [inline], [static]
```

Same as `enable(0)`, disables tooltips on all widgets.

9.142.2.7 enable()

```
static void Fl_Tooltip::enable (
    int b = 1 ) [inline], [static]
```

Enables tooltips on all widgets (or disables if `b` is false).

9.142.2.8 enabled()

```
static int Fl_Tooltip::enabled ( ) [inline], [static]
```

Returns non-zero if tooltips are enabled.

9.142.2.9 enter_area()

```
void Fl_Tooltip::enter_area (
    Fl_Widget * wid,
    int x,
    int y,
    int w,
    int h,
    const char * t ) [static]
```

You may be able to use this to provide tooltips for internal pieces of your widget.

Call this after setting `Fl::belowmouse()` to your widget (because that calls the above `enter()` method). Then figure out what thing the mouse is pointing at, and call this with the widget (this pointer is used to remove the tooltip if the widget is deleted or hidden, and to locate the tooltip), the rectangle surrounding the area, relative to the top-left

corner of the widget (used to calculate where to put the tooltip), and the text of the tooltip (which must be a pointer to static data as it is not copied).

9.142.2.10 font() [1/2]

```
static Fl_Font Fl_Tooltip::font ( ) [inline], [static]
```

Gets the typeface for the tooltip text.

9.142.2.11 font() [2/2]

```
static void Fl_Tooltip::font (
    Fl_Font i ) [inline], [static]
```

Sets the typeface for the tooltip text.

9.142.2.12 hoverdelay() [1/2]

```
static float Fl_Tooltip::hoverdelay ( ) [inline], [static]
```

Gets the tooltip hover delay, the delay between tooltips.
The default delay is 0.2 seconds.

9.142.2.13 hoverdelay() [2/2]

```
static void Fl_Tooltip::hoverdelay (
    float f ) [inline], [static]
```

Sets the tooltip hover delay, the delay between tooltips.
The default delay is 0.2 seconds.

9.142.2.14 margin_height() [1/2]

```
static int Fl_Tooltip::margin_height ( ) [inline], [static]
```

Gets the amount of extra space above and below the tooltip's text.
Default is 3.

9.142.2.15 margin_height() [2/2]

```
static void Fl_Tooltip::margin_height (
    int v ) [inline], [static]
```

Sets the amount of extra space above and below the tooltip's text.
Default is 3.

9.142.2.16 margin_width() [1/2]

```
static int Fl_Tooltip::margin_width ( ) [inline], [static]
```

Gets the amount of extra space left/right of the tooltip's text.
Default is 3.

9.142.2.17 margin_width() [2/2]

```
static void Fl_Tooltip::margin_width (
    int v ) [inline], [static]
```

Sets the amount of extra space left/right of the tooltip's text.
Default is 3.

9.142.2.18 size() [1/2]

```
static Fl_Fontsize Fl_Tooltip::size ( ) [inline], [static]
```

Gets the size of the tooltip text.

9.142.2.19 size() [2/2]

```
static void Fl_Tooltip::size (
    Fl_Fontsize s ) [inline], [static]
```

Sets the size of the tooltip text.

9.142.2.20 textcolor() [1/2]

```
static Fl_Color Fl_Tooltip::textcolor ( ) [inline], [static]
```

Gets the color of the text in the tooltip.
The default is black.

9.142.2.21 textcolor() [2/2]

```
static void Fl_Tooltip::textcolor (
    Fl_Color c ) [inline], [static]
```

Sets the color of the text in the tooltip.
The default is black.

9.142.2.22 wrap_width() [1/2]

```
static int Fl_Tooltip::wrap_width ( ) [inline], [static]
```

Gets the maximum width for tooltip's text before it word wraps.
Default is 400.

9.142.2.23 wrap_width() [2/2]

```
static void Fl_Tooltip::wrap_width (
    int v ) [inline], [static]
```

Sets the maximum width for tooltip's text before it word wraps.
Default is 400.

The documentation for this class was generated from the following files:

- Fl_Tooltip.H
- Fl.cxx
- Fl_Tooltip.cxx

9.143 Fl_Tree Class Reference

Tree widget.

```
#include <Fl_Tree.H>
```

Inheritance diagram for Fl_Tree:

Public Member Functions

- `FI_Tree_Item * add` (const char *path, `FI_Tree_Item *newitem=0`)
Adds a new item, given a menu style 'path'.
- `FI_Tree_Item * add` (`FI_Tree_Item *parent_item`, const char *name)
Add a new child item labeled 'name' to the specified 'parent_item'.
- void `calc_dimensions` ()
Recalculate widget dimensions and scrollbar visibility, normally managed automatically.
- void `calc_tree` ()
Recalculates the tree's sizes and scrollbar visibility, normally managed automatically.
- `FI_Tree_Item * callback_item` ()
Gets the item that caused the callback.
- void `callback_item` (`FI_Tree_Item *item`)
Sets the item that was changed for this callback.
- `FI_Tree_Reason callback_reason` () const
Gets the reason for this callback.
- void `callback_reason` (`FI_Tree_Reason reason`)
Sets the reason for this callback.
- void `clear` ()
Clear the entire tree's children, including the root.
- void `clear_children` (`FI_Tree_Item *item`)
Clear all the children for 'item'.
- int `close` (const char *path, int docallback=1)
Closes the item specified by 'path'.
- int `close` (`FI_Tree_Item *item`, int docallback=1)
Closes the specified 'item'.
- `FI_Image * closeicon` () const
Returns the icon to be used as the 'close' icon.
- void `closeicon` (`FI_Image *val`)
Sets the icon to be used as the 'close' icon.
- `FI_Color connectorcolor` () const
Get the connector color used for tree connection lines.
- void `connectorcolor` (`FI_Color val`)
Set the connector color used for tree connection lines.
- `FI_Tree_Connector connectorstyle` () const
Returns the line drawing style for inter-connecting items.
- void `connectorstyle` (`FI_Tree_Connector val`)
Sets the line drawing style for inter-connecting items.
- int `connectorwidth` () const
Gets the width of the horizontal connection lines (in pixels) that appear to the left of each tree item's label.
- void `connectorwidth` (int val)
Sets the width of the horizontal connection lines (in pixels) that appear to the left of each tree item's label.
- int `deselect` (const char *path, int docallback=1)
Deselect an item specified by 'path'.
- int `deselect` (`FI_Tree_Item *item`, int docallback=1)
Deselect the specified item.
- int `deselect_all` (`FI_Tree_Item *item=0`, int docallback=1)
Deselect 'item' and all its children.
- void `display` (`FI_Tree_Item *item`)
Displays 'item', scrolling the tree as necessary.
- int `displayed` (`FI_Tree_Item *item`)

- See if *'item'* is currently displayed on-screen (visible within the widget).
- void `draw ()`
Standard FLTK `draw()` method, handles drawing the tree widget.
 - int `extend_selection (FI_Tree_Item *from, FI_Tree_Item *to, int val=1, bool visible=false)`
Extend a selection between *'from'* and *'to'* depending on *'visible'*.
 - int `extend_selection_dir (FI_Tree_Item *from, FI_Tree_Item *to, int dir, int val, bool visible)`
Extend the selection between and including *'from'* and *'to'* depending on direction *'dir'*, *'val'*, and *'visible'*.
 - `FI_Tree_Item * find_clicked (int yonly=0)`
Non-const version of `FI_Tree::find_clicked(int yonly) const`.
 - const `FI_Tree_Item * find_clicked (int yonly=0) const`
Find the item that was last clicked on.
 - `FI_Tree_Item * find_item (const char *path)`
Non-const version of `FI_Tree::find_item(const char *path) const`.
 - const `FI_Tree_Item * find_item (const char *path) const`
Find the item, given a menu style path, e.g.
 - `FI_Tree_Item * first ()`
Returns the first item in the tree, or 0 if none.
 - `FI_Tree_Item * first_selected_item ()`
Returns the first selected item in the tree.
 - `FI_Tree_Item * first_visible ()`
Returns the first `open()`, visible item in the tree, or 0 if none.
 - `FI_Tree_Item * first_visible_item ()`
Returns the first `open()`, visible item in the tree, or 0 if none.
 - `FI_Tree (int X, int Y, int W, int H, const char *L=0)`
Constructor.
 - `FI_Tree_Item * get_item_focus () const`
Get the item that currently has keyboard focus.
 - int `get_selected_items (FI_Tree_Item_Array &ret_items)`
Returns the currently selected items as an array of *'ret_items'*.
 - int `handle (int e)`
Standard FLTK event handler for this widget.
 - int `hposition () const`
Returns the horizontal scroll position as a pixel offset.
 - void `hposition (int pos)`
Sets the horizontal scroll offset to position *'pos'*.
 - `FI_Tree_Item * insert (FI_Tree_Item *item, const char *name, int pos)`
Insert a new item *'name'* into *'item'*'s children at position *'pos'*.
 - `FI_Tree_Item * insert_above (FI_Tree_Item *above, const char *name)`
Inserts a new item *'name'* above the specified `FI_Tree_Item` *'above'*.
 - int `is_close (const char *path) const`
See if item specified by *'path'* is closed.
 - int `is_close (FI_Tree_Item *item) const`
See if the specified *'item'* is closed.
 - int `is_hscroll_visible () const`
See if the horizontal scrollbar is currently visible.
 - int `is_open (const char *path) const`
See if item specified by *'path'* is open.
 - int `is_open (FI_Tree_Item *item) const`
See if *'item'* is open.
 - int `is_scrollbar (FI_Widget *w)`

- See if widget 'w' is one of the FI_Tree widget's scrollbars.*

 - int **is_selected** (const char *path)
 - See if item specified by 'path' is selected.*
 - int **is_selected** (FI_Tree_Item *item) const
 - See if the specified 'item' is selected.*
 - int **is_vscroll_visible** () const
 - See if the vertical scrollbar is currently visible.*
 - FI_Tree_Item * **item_clicked** ()
 - Return the item that was last clicked.*
 - FI_Tree_Item_Draw_Mode **item_draw_mode** () const
 - Get the 'item draw mode' used for the tree.*
 - void **item_draw_mode** (FI_Tree_Item_Draw_Mode mode)
 - Set the 'item draw mode' used for the tree to 'mode'.*
 - void **item_draw_mode** (int mode)
 - Set the 'item draw mode' used for the tree to integer 'mode'.*
 - void **item_labelbgcolor** (FI_Color val)
 - Set the default label background color used for creating new items.*
 - FI_Color **item_labelbgcolor** (void) const
 - Get the default label background color used for creating new items.*
 - void **item_labelfgcolor** (FI_Color val)
 - Set the default label foreground color used for creating new items.*
 - FI_Color **item_labelfgcolor** (void) const
 - Get the default label foreground color used for creating new items.*
 - FI_Font **item_labelfont** () const
 - Get the default font face used for creating new items.*
 - void **item_labelfont** (FI_Font val)
 - Set the default font face used for creating new items.*
 - FI_Fontsize **item_labelsize** () const
 - Get the default label fontsize used for creating new items.*
 - void **item_labelsize** (FI_Fontsize val)
 - Set the default label font size used for creating new items.*
 - int **item_pathname** (char *pathname, int pathnamelen, const FI_Tree_Item *item) const
 - Return 'pathname' of size 'pathnamelen' for the specified 'item'.*
 - FI_Tree_Item_Reselect_Mode **item_reselect_mode** () const
 - Returns the current item re/selection mode.*
 - void **item_reselect_mode** (FI_Tree_Item_Reselect_Mode mode)
 - Sets the item re/selection mode.*
 - int **labelmarginleft** () const
 - Get the amount of white space (in pixels) that should appear to the left of the label text.*
 - void **labelmarginleft** (int val)
 - Set the amount of white space (in pixels) that should appear to the left of the label text.*
 - FI_Tree_Item * **last** ()
 - Returns the last item in the tree.*
 - FI_Tree_Item * **last_selected_item** ()
 - Returns the last selected item in the tree.*
 - FI_Tree_Item * **last_visible** ()
 - Returns the last open(), visible item in the tree.*
 - FI_Tree_Item * **last_visible_item** ()
 - Returns the last open(), visible item in the tree.*
 - int **linespacing** () const
 - Get the amount of white space (in pixels) that should appear between items in the tree.*

- void **linespacing** (int val)

Sets the amount of white space (in pixels) that should appear between items in the tree.
- void **load** (class [FI_Preferences](#) &)

Load FLTK preferences.
- int **marginbottom** () const

Get the amount of white space (in pixels) that should appear below the last visible item when the vertical scroller is scrolled to the bottom.
- void **marginbottom** (int val)

Sets the amount of white space (in pixels) that should appear below the last visible item when the vertical scroller is scrolled to the bottom.
- int **marginleft** () const

Get the amount of white space (in pixels) that should appear between the widget's left border and the tree's contents.
- void **marginleft** (int val)

Set the amount of white space (in pixels) that should appear between the widget's left border and the left side of the tree's contents.
- int **margin** () const

Get the amount of white space (in pixels) that should appear between the widget's top border and the top of the tree's contents.
- void **margin** (int val)

Sets the amount of white space (in pixels) that should appear between the widget's top border and the top of the tree's contents.
- [FI_Tree_Item](#) * **next** ([FI_Tree_Item](#) *item=0)

Return the next item after 'item', or 0 if no more items.
- [FI_Tree_Item](#) * **next_item** ([FI_Tree_Item](#) *item, int dir=[FL_Down](#), bool visible=false)

Returns next item after 'item' in direction 'dir' depending on 'visible'.
- [FI_Tree_Item](#) * **next_selected_item** ([FI_Tree_Item](#) *item=0, int dir=[FL_Down](#))

Returns the next selected item above or below 'item', depending on 'dir'.
- [FI_Tree_Item](#) * **next_visible_item** ([FI_Tree_Item](#) *start, int dir)

Returns next [open\(\)](#), visible item above (dir==[FL_Up](#)) or below (dir==[FL_Down](#)) the specified 'item', or 0 if no more items.
- int **open** (const char *path, int docallback=1)

Opens the item specified by 'path'.
- int **open** ([FI_Tree_Item](#) *item, int docallback=1)

Open the specified 'item'.
- void **open_toggle** ([FI_Tree_Item](#) *item, int docallback=1)

Toggle the open state of 'item'.
- int **openchild_marginbottom** () const

Get the amount of white space (in pixels) that should appear below an open child tree's contents.
- void **openchild_marginbottom** (int val)

Set the amount of white space (in pixels) that should appear below an open child tree's contents.
- [FI_Image](#) * **openicon** () const

Returns the icon to be used as the 'open' icon.
- void **openicon** ([FI_Image](#) *val)

Sets the icon to be used as the 'open' icon.
- const [FI_Tree_Prefs](#) & **prefs** () const
- [FI_Tree_Item](#) * **prev** ([FI_Tree_Item](#) *item=0)

Return the previous item before 'item', or 0 if no more items.
- void **recalc_tree** ()

Schedule tree to recalc the entire tree size.
- int **remove** ([FI_Tree_Item](#) *item)

Remove the specified 'item' from the tree.
- void **resize** (int, int, int, int)

- Resizes the [FI_Group](#) widget and all of its children.*

 - [FI_Tree_Item](#) * **root** ()

Returns the root item.
- void [root](#) ([FI_Tree_Item](#) *newitem)

Sets the root item to 'newitem'.
- void [root_label](#) (const char *new_label)

Set the label for the root item to 'new_label'.
- int [scrollbar_size](#) () const

Gets the default size of scrollbars' troughs for this widget in pixels.
- void [scrollbar_size](#) (int size)

Sets the pixel size of the scrollbars' troughs to 'size' for this widget, in pixels.
- int [select](#) (const char *path, int docallback=1)

Select the item specified by 'path'.
- int [select](#) ([FI_Tree_Item](#) *item, int docallback=1)

Select the specified 'item'.
- int [select_all](#) ([FI_Tree_Item](#) *item=0, int docallback=1)

Select 'item' and all its children.
- int [select_only](#) ([FI_Tree_Item](#) *selitem, int docallback=1)

Select only the specified item, deselecting all others that might be selected.
- void [select_toggle](#) ([FI_Tree_Item](#) *item, int docallback=1)

Toggle the select state of the specified 'item'.
- [FI_Boxtype](#) [selectbox](#) () const

Sets the style of box used to draw selected items.
- void [selectbox](#) ([FI_Boxtype](#) val)

Gets the style of box used to draw selected items.
- [FI_Tree_Select](#) [selectmode](#) () const

Gets the tree's current selection mode.
- void [selectmode](#) ([FI_Tree_Select](#) val)

Sets the tree's selection mode.
- void [set_item_focus](#) ([FI_Tree_Item](#) *item)

Set the item that currently should have keyboard focus.
- void [show_item](#) ([FI_Tree_Item](#) *item)

Adjust the vertical scrollbar to show 'item' at the top of the display IF it is currently off-screen (for instance [show_item_top\(\)](#)).
- void [show_item](#) ([FI_Tree_Item](#) *item, int yoff)

Adjust the vertical scrollbar so that 'item' is visible 'yoff' pixels from the top of the [FI_Tree](#) widget's display.
- void [show_item_bottom](#) ([FI_Tree_Item](#) *item)

Adjust the vertical scrollbar so that 'item' is at the bottom of the display.
- void [show_item_middle](#) ([FI_Tree_Item](#) *item)

Adjust the vertical scrollbar so that 'item' is in the middle of the display.
- void [show_item_top](#) ([FI_Tree_Item](#) *item)

Adjust the vertical scrollbar so that 'item' is at the top of the display.
- void [show_self](#) ()

Print the tree as 'ascii art' to stdout.
- int [showcollapse](#) () const

Returns 1 if the collapse icon is enabled, 0 if not.
- void [showcollapse](#) (int val)

Set if we should show the collapse icon or not.
- int **showroot** () const

Returns 1 if the root item is to be shown, or 0 if not.
- void [showroot](#) (int val)

- Set if the root item should be shown or not.*
- [FL_Tree_Sort](#) `sortorder` () const
 - Set the default sort order used when items are added to the tree.*
- void `sortorder` ([FL_Tree_Sort](#) val)
 - Gets the sort order used to add items to the tree.*
- [FL_Image](#) * `usericon` () const
 - Returns the [FL_Image](#) being used as the default user icon for all newly created items.*
- void `usericon` ([FL_Image](#) *val)
 - Sets the [FL_Image](#) to be used as the default user icon for all newly created items.*
- int `usericonmarginleft` () const
 - Get the amount of white space (in pixels) that should appear to the left of the usericon.*
- void `usericonmarginleft` (int val)
 - Set the amount of white space (in pixels) that should appear to the left of the usericon.*
- int `vposition` () const
 - Returns the vertical scroll position as a pixel offset.*
- void `vposition` (int pos)
 - Sets the vertical scroll offset to position 'pos'.*
- int `widgetmarginleft` () const
 - Get the amount of white space (in pixels) that should appear to the left of the child fltk widget (if any).*
- void `widgetmarginleft` (int val)
 - Set the amount of white space (in pixels) that should appear to the left of the child fltk widget (if any).*
- `~FL_Tree` ()
 - Destructor.*

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& `_ddfdesign_kludge` ()
 - This is for forms compatibility only.*
- void `add` ([FL_Widget](#) &)
 - The widget is removed from its current group (if any) and then added to the end of this group.*
- void `add` ([FL_Widget](#) *o)
 - See void [FL_Group::add\(FL_Widget &w\)](#)*
- void `add_resizable` ([FL_Widget](#) &o)
 - Adds a widget to the group and makes it the resizable widget.*
- [FL_Widget](#) *const * `array` () const
 - Returns a pointer to the array of children.*
- virtual [FL_Group](#) * `as_group` ()
 - Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).*
- void `begin` ()
 - Sets the current group so you can build the widget tree by just constructing the widgets.*
- [FL_Widget](#) * `child` (int n) const
 - Returns array()[n].*
- int `children` () const
 - Returns how many child widgets the group has.*
- void `clear` ()
 - Deletes all child widgets from memory recursively.*
- unsigned int `clip_children` ()
 - Returns the current clipping mode.*
- void `clip_children` (int c)
 - Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- void `end` ()

- Exactly the same as `current(this->parent())`.*
- int **find** (const [FI_Widget](#) &o) const

*See `int FI_Group::find(const FI_Widget *w) const`.*
- int **find** (const [FI_Widget](#) *) const

Searches the child array for the widget and returns the index.
- [FI_Group](#) (int, int, int, int, const char *s=0)

Creates a new [FI_Group](#) widget using the given position, size, and label string.
- void **focus** ([FI_Widget](#) *W)
- void **forms_end** ()

This is for forms compatibility only.
- void **init_sizes** ()

Resets the internal array of widget sizes and positions.
- void **insert** ([FI_Widget](#) &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** ([FI_Widget](#) &o, [FI_Widget](#) *before)

This does `insert(w, find(before))`.
- void **remove** ([FI_Widget](#) &)

Removes a widget from the group but does not delete it.
- void **remove** ([FI_Widget](#) *o)

Removes the widget o from the group.
- void **remove** (int index)

Removes the widget at index from the group but does not delete it.
- [FI_Widget](#) * **resizable** () const

*See `void FI_Group::resizable(FI_Widget *box)`*
- void **resizable** ([FI_Widget](#) &o)

*See `void FI_Group::resizable(FI_Widget *box)`*
- void **resizable** ([FI_Widget](#) *o)

The resizable widget defines the resizing box for the group.
- virtual **~FI_Group** ()

The destructor also deletes all the children.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()

Activates the widget.
- unsigned int **active** () const

Returns whether the widget is active.
- int **active_r** () const

Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const

Gets the label alignment.
- void **align** ([FI_Align](#) alignment)

Sets the label alignment.
- long **argument** () const

Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()

Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).

- virtual `FI_Window * as_window ()`
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype box () const`
Gets the box type of the widget.
- void `box (FI_Boxtype new_box)`
Sets the box type for the widget.
- `FI_Callback_p callback () const`
Gets the current callback function for the widget.
- void `callback (FI_Callback *cb)`
Sets the current callback function for the widget.
- void `callback (FI_Callback *cb, void *p)`
Sets the current callback function for the widget.
- void `callback (FI_Callback0 *cb)`
Sets the current callback function for the widget.
- void `callback (FI_Callback1 *cb, long p=0)`
Sets the current callback function for the widget.
- unsigned int `changed () const`
Checks if the widget value changed since the last callback.
- void `clear_active ()`
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed ()`
Marks the value of the widget as unchanged.
- void `clear_damage (uchar c=0)`
Clears or sets the damage flags.
- void `clear_output ()`
Sets a widget to accept input.
- void `clear_visible ()`
Hides the widget.
- void `clear_visible_focus ()`
Disables keyboard focus navigation with this widget.
- `FI_Color color () const`
Gets the background color of the widget.
- void `color (FI_Color bg)`
Sets the background color of the widget.
- void `color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
- `FI_Color color2 () const`
For back compatibility only.
- void `color2 (unsigned a)`
For back compatibility only.
- int `contains (const FI_Widget *w) const`
Checks if `w` is a child of this widget.
- void `copy_label (const char *new_label)`
Sets the current label.
- void `copy_tooltip (const char *text)`
Sets the current tooltip text.
- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- void `damage (uchar c)`
Sets the damage bits for the widget.
- void `damage (uchar c, int x, int y, int w, int h)`

- Sets the damage bits for an area inside the widget.*

 - int **damage_resize** (int, int, int, int)

Internal use only.
- void **deactivate** ()

Deactivates the widget.
- **FL_Image * deimage** ()

Gets the image that is used as part of the widget label.
- const **FL_Image * deimage** () const
- void **deimage** (**FL_Image** &img)

Sets the image to use as part of the widget label.
- void **deimage** (**FL_Image** *img)

Sets the image to use as part of the widget label.
- void **do_callback** ()

Calls the widget callback.
- void **do_callback** (**FL_Widget** *o, long arg)

Calls the widget callback.
- void **do_callback** (**FL_Widget** *o, void *arg=0)

Calls the widget callback.
- void **draw_label** (int, int, int, int, **FL_Align**) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int **h** () const

Gets the widget height.
- virtual void **hide** ()

Makes a widget invisible.
- **FL_Image * image** ()

Gets the image that is used as part of the widget label.
- const **FL_Image * image** () const
- void **image** (**FL_Image** &img)

Sets the image to use as part of the widget label.
- void **image** (**FL_Image** *img)

Sets the image to use as part of the widget label.
- int **inside** (const **FL_Widget** *wgt) const

Checks if this widget is a child of wgt.
- int **is_label_copied** () const

Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * **label** () const

Gets the current label text.
- void **label** (const char *text)

Sets the current label pointer.
- void **label** (**FL_Labeltype** a, const char *b)

Shortcut to set the label text and type in one call.
- **FL_Color labelcolor** () const

Gets the label color.
- void **labelcolor** (**FL_Color** c)

Sets the label color.
- **FL_Font labelfont** () const

Gets the font to use.
- void **labelfont** (**FL_Font** f)

Sets the font to use.
- **FL_Fontsize labelsize** () const

Gets the font size in pixels.

- void `labelsize` (`FI_Fontsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color` `selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color` a)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window` * `top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window` * `top_window_offset` (int &xoff, int &yoff) const

- Finds the x/y offset of the current widget relative to the top-level window.*

 - `uchar type () const`
Gets the widget type.
 - `void type (uchar t)`
Sets the widget type.
 - `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
 - `void * user_data () const`
Gets the user data for this widget.
 - `void user_data (void *v)`
Sets the user data for this widget.
 - `unsigned int visible () const`
Returns whether a widget is visible.
 - `unsigned int visible_focus ()`
Checks whether this widget has a visible focus.
 - `void visible_focus (int v)`
Modifies keyboard focus navigation.
 - `int visible_r () const`
Returns whether a widget and all its parents are visible.
 - `int w () const`
Gets the widget width.
 - `FI_When when () const`
Returns the conditions under which the callback is called.
 - `void when (uchar i)`
Sets the flags used to decide when a callback is called.
 - `FI_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
 - `int x () const`
Gets the widget position in its window.
 - `int y () const`
Gets the widget position in its window.
 - `virtual ~FI_Widget ()`
Destroys the widget.

Protected Member Functions

- `void do_callback_for_item (FI_Tree_Item *item, FI_Tree_Reason reason)`
Do the callback for the specified 'item' using 'reason', setting the `callback_item()` and `callback_reason()`.
- `void item_clicked (FI_Tree_Item *val)`
Set the item that was last clicked.

Protected Member Functions inherited from FI_Group

- `void draw_child (FI_Widget &widget) const`
Forces a child to redraw.
- `void draw_children ()`
Draws all children of the group.
- `void draw_outside_label (const FI_Widget &widget) const`
Parents normally call this to draw outside labels of child widgets.
- `int * sizes ()`
Returns the internal array of widget sizes and positions.
- `void update_child (FI_Widget &widget) const`
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Protected Attributes

- [FI_Scrollbar](#) * **_hscroll**
Horizontal scrollbar.
- int **_tih**
Tree widget inner xywh dimension: inside borders + scrollbars.
- int **_tiw**
- int **_tix**
- int **_tiy**
- int **_toh**
Tree widget outer xywh dimension: outside scrollbars, inside widget border.
- int **_tow**
- int **_tox**
- int **_toy**
- int **_tree_h**
the calculated height of the entire tree hierarchy. See [calc_tree\(\)](#)
- int **_tree_w**
the calculated width of the entire tree hierarchy. See [calc_tree\(\)](#)
- [FI_Scrollbar](#) * **_vscroll**
Vertical scrollbar.

Friends

- class `Fl_Tree_Item`

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Group`

- static `Fl_Group * current ()`
Returns the currently active group.
- static void `current (Fl_Group *g)`
Sets the current group.

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback (Fl_Widget *cb, void *d)`
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut (const char *t)`
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut (const char *, const bool require_alt=false)`
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE = 1<<0`, `INVISIBLE = 1<<1`, `OUTPUT = 1<<2`, `NOBORDER = 1<<3`,

9.143.1 Detailed Description

Tree widget.

```
\image html tree-simple.png "Fl_Tree example program"
\image latex tree-simple.png "Fl_Tree example program" width=4cm
```

```
Fl_Tree // Top level widget
|--- Fl_Tree_Item // Items in the tree
|--- Fl_Tree_Prefs // Preferences for the tree
|   |--- Fl_Tree_Connector (enum) // Connection modes
|   |--- Fl_Tree_Select (enum) // Selection modes
|   |--- Fl_Tree_Sort (enum) // Sort behavior
```

Similar to `Fl_Browser`, `Fl_Tree` is a browser of `Fl_Tree_Item`'s arranged in a parented hierarchy, or 'tree'. Subtrees can be expanded or closed. Items can be added, deleted, inserted, sorted and re-ordered.

The tree items may also contain other FLTK widgets, like buttons, input fields, or even "custom" widgets.

The `callback()` is invoked depending on the value of `when()`:

- `FL_WHEN_RELEASE` -- callback invoked when left mouse button is released on an item
- `FL_WHEN_CHANGED` -- callback invoked when left mouse changes selection state

The simple way to define a tree:

```
#include <FL/Fl_Tree.H>
[... ]
Fl_Tree tree(X, Y, W, H);
```

```
tree.begin();
tree.add("Flintstones/Fred");
tree.add("Flintstones/Wilma");
tree.add("Flintstones/Pebbles");
tree.add("Simpsons/Homer");
tree.add("Simpsons/Marge");
tree.add("Simpsons/Bart");
tree.add("Simpsons/Lisa");
tree.end();
```

FEATURES

Items can be added with [add\(\)](#), removed with [remove\(\)](#), completely cleared with [clear\(\)](#), inserted with [insert\(\)](#) and [insert_above\(\)](#), selected/deselected with [select\(\)](#) and [deselect\(\)](#), open/closed with [open\(\)](#) and [close\(\)](#), positioned on the screen with [show_item_top\(\)](#), [show_item_middle\(\)](#) and [show_item_bottom\(\)](#), item children can be swapped around with [FI_Tree_Item::swap_children\(\)](#), sorting can be controlled when items are [add\(\)](#)ed via [sortorder\(\)](#). You can walk the entire tree with [first\(\)](#) and [next\(\)](#). You can walk visible items with [first_visible_item\(\)](#) and [next_visible_item\(\)](#). You can walk selected items with [first_selected_item\(\)](#) and [next_selected_item\(\)](#). Items can be found by their pathname using [find_item\(const char*\)](#), and an item's pathname can be found with [item_pathname\(\)](#). The selected items' colors are controlled by [selection_color\(\)](#) (inherited from [FI_Widget](#)). A hook is provided to allow you to redefine how item's labels are drawn via [FI_Tree::item_draw_callback\(\)](#).

SELECTION OF ITEMS

The tree can have different selection behaviors controlled by [selectmode\(\)](#). The background color used for selected items is the [FI_Tree::selection_color\(\)](#). The foreground color for selected items is controlled internally with [fl_contrast\(\)](#).

CHILD WIDGETS

FLTK widgets (including custom widgets) can be assigned to tree items via [FI_Tree_Item::widget\(\)](#).

When an [FI_Tree_Item::widget\(\)](#) is defined, the default behavior is for the [widget\(\)](#) to be shown in place of the item's label (if it has one). Only the [widget\(\)](#)'s width will be used; the [widget\(\)](#)'s x() and y() position will be managed by the tree, and the h() will track the item's height. This default behavior can be altered (ABI 1.3.1): Setting [FI_Tree::item_draw_mode\(\)](#)'s `FL_TREE_ITEM_DRAW_LABEL_AND_WIDGET` flag causes the label + widget to be displayed together in that order, and adding the `FL_TREE_ITEM_HEIGHT_FROM_WIDGET` flag causes widget's height to define the [widget\(\)](#)'s height.

ICONS

The tree's open/close icons can be redefined with [FI_Tree::openicon\(\)](#), [FI_Tree::closeicon\(\)](#). User icons can either be changed globally with [FI_Tree::usericon\(\)](#), or on a per-item basis with [FI_Tree_Item::usericon\(\)](#).

Various default preferences can be globally manipulated via [FI_Tree_Prefs](#), including colors, margins, icons, connection lines, etc.

FONTS AND COLORS

When adding new items to the tree, the new items get the defaults for fonts and colors from:

- `Fl_Tree::item_labelfont()` – The default item label font (default: `FL_HELVETICA`)
- `Fl_Tree::item_labelsize()` – The default item label size (default: `FL_NORMAL_SIZE`)
- `Fl_Tree::item_labelfgcolor()` – The default item label foreground color (default: `FL_FOREGROUND_COLOR`)
- `Fl_Tree::item_labelbgcolor()` – The default item label background color (default: `0xffffffff`, which tree uses as 'transparent')

Each item (`Fl_Tree_Item`) inherits a copy of these font/color attributes when created, and each item has its own methods to let the app change these values on a per-item basis using methods of the same name:

- `Fl_Tree_Item::labelfont()` – The item's label font (default: `FL_HELVETICA`)
- `Fl_Tree_Item::labelsizesize()` – The item's label size (default: `FL_NORMAL_SIZE`)
- `Fl_Tree_Item::labelfgcolor()` – The item's label foreground color (default: `FL_FOREGROUND_COLOR`)
- `Fl_Tree_Item::labelbgcolor()` – The item's label background color (default: `0xffffffff`, which uses the tree's own bg color)

CALLBACKS

The tree's `callback()` will be invoked when items change state or are open/closed. `when()` controls when mouse/keyboard events invoke the callback. `callback_item()` and `callback_reason()` can be used to determine the cause of the callback. e.g.

```
void MyTreeCallback(Fl_Widget *w, void *data) {
    Fl_Tree *tree = (Fl_Tree*)w;
    Fl_Tree_Item *item = (Fl_Tree_Item*)tree->callback_item(); // get selected item
    switch ( tree->callback_reason() ) {
        case FL_TREE_REASON_SELECTED: [...]
        case FL_TREE_REASON_DESELECTED: [...]
        case FL_TREE_REASON_RESELECTED: [...]
        case FL_TREE_REASON_OPENED: [...]
        case FL_TREE_REASON_CLOSED: [...]
    }
}
```

SIMPLE EXAMPLES

To find all the selected items:

```
for ( Fl_Tree_Item *i=first_selected_item(); i; i=next_selected_item(i) )
    printf("Item %s is selected\n", i->label());
```

To get an item's full menu pathname, use `Fl_Tree::item_pathname()`, e.g.

```
char pathname[256] = "???";
tree->item_pathname(pathname, sizeof(pathname), item); // eg. "Parent/Child/Item"
```

To walk all the items of the tree from top to bottom:

```
// Walk all the items in the tree, and print their labels
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) ) {
    printf("Item: %s\n", item->label());
}
```

To recursively walk all the children of a particular item, define a function that uses recursion:

```
// Find all of the item's children and print an indented report of their labels
void my_print_all_children(Fl_Tree_Item *item, int indent=0) {
    for ( int t=0; t<item->children(); t++ ) {
        printf("%*s Item: %s\n", indent, "", item->child(t)->label());
        my_print_all_children(item->child(t), indent+4); // recurse
    }
}
```

To change the default label font and color when creating new items:

```
tree = new Fl_Tree(..);
tree->item_labelfont(FL_COURIER); // Use Courier font for all new items
tree->item_labelcolor(FL_RED); // Use red color for labels of all new items
[...]
```

// Now create the items in the tree using the above defaults.

```
tree->add("Aaa");
tree->add("Bbb");
[...]
```

To change the font and color of all existing items in the tree:

```
// Change the font and color of all items currently in the tree
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) ) {
    item->labelfont(FL_COURIER);
    item->labelcolor(FL_RED);
}
```

DISPLAY DESCRIPTION

The following image shows the tree's various visual elements and the methods that control them:

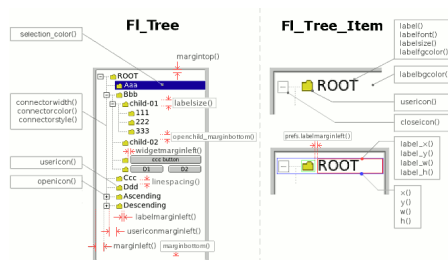

Figure 9.45 Fl_Tree elements

The following shows the protected dimension variables 'tree inner' (tix..) and 'tree outer' (tox..):

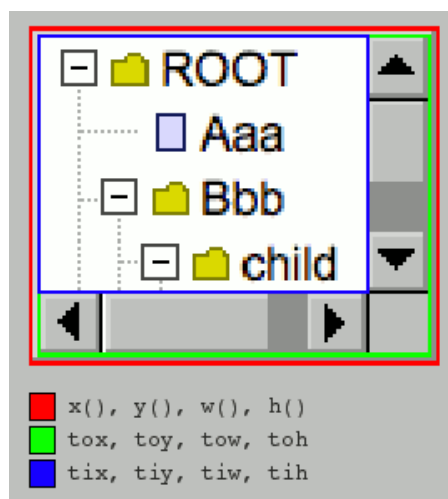

Figure 9.46 Fl_Tree inner/outer dimensions

KEYBOARD BINDINGS

The following table lists keyboard bindings for navigating the tree:

Table 9.466 Keyboard bindings.

Keyboard	FL_TREE_SELECT_↔ MULTI	FL_TREE_SELECT_↔ SINGLE	FL_TREE_SELECT_↔ NONE
Ctrl-A (Linux/Windows) Command-A (Mac)	Select all items.	N/A	N/A
Space	Selects item.	Selects item.	N/A
Ctrl-Space	Toggle item.	Toggle item.	N/A
Shift-Space	Extends selection from last item.	Selects item.	N/A
Enter, Ctrl-Enter, Shift-Enter	Toggles open/close	Toggles open/close	Toggles open/close
Right / Left	Open/Close item.	Open/Close item.	Open/Close item.
Up / Down	Move focus box up/down.	Move focus box up/down.	N/A
Shift-Up / Shift-Down	Extend selection up/down.	Move focus up/down.	N/A
Home / End	Move to top/bottom of tree.	Move to top/bottom of tree.	Move to top/bottom of tree.
PageUp / PageDown	Page up/down.	Page up/down.	Page up/down.

9.143.2 Member Function Documentation

9.143.2.1 add() [1/2]

```
Fl_Tree_Item * Fl_Tree::add (
    const char * path,
    Fl_Tree_Item * item = 0 )
```

Adds a new item, given a menu style 'path'.

Any parent nodes that don't already exist are created automatically. Adds the item based on the value of [sortorder\(\)](#).

If 'item' is NULL, a new item is created.

To specify items or submenus that contain slashes ('/' or '\') use an escape character to protect them, e.g.

```
tree->add("/Holidays/Photos/12\\25\\2010"); // Adds item "12/25/2010"
tree->add("/Pathnames/c:\\\\Program Files\\\\MyApp"); // Adds item "c:\Program Files\MyApp"
```

Parameters

in	<i>path</i>	The path to the item, e.g. "Flintstone/Fred".
in	<i>item</i>	The new item to be added. If NULL, a new item is created with a name that is the last element in 'path'.

Returns

The new item added, or 0 on error.

Version

1.3.3

9.143.2.2 add() [2/2]

```
Fl_Tree_Item * Fl_Tree::add (
    Fl_Tree_Item * parent_item,
    const char * name )
```

Add a new child item labeled 'name' to the specified 'parent_item'.

Parameters

in	<i>parent_item</i>	The parent item the new child item will be added to. Must not be NULL.
in	<i>name</i>	The label for the new item

Returns

The new item added.

Version

1.3.0 release

9.143.2.3 calc_dimensions()

```
void Fl_Tree::calc_dimensions ( )
```

Recalculate widget dimensions and scrollbar visibility, normally managed automatically.

Low overhead way to update the tree widget's outer/inner dimensions and re-determine scrollbar visibility based on these changes without recalculating the entire size of the tree data.

Assumes that either the tree's size in `_tree_w/_tree_h` are correct so that scrollbar visibility can be calculated easily, or are both zero indicating scrollbar visibility can't be calculated yet.

This method is called when the widget is `resize()`ed or if the scrollbar's sizes are changed (affects tree widget's inner dimensions `tix/y/w/h`), and also used by `calc_tree()`.

Version

1.3.3 ABI feature

9.143.2.4 calc_tree()

```
void Fl_Tree::calc_tree ( )
```

Recalculates the tree's sizes and scrollbar visibility, normally managed automatically.

On return:

- `_tree_w` will be the overall pixel width of the entire viewable tree
- `_tree_h` will be the overall pixel height "
- scrollbar visibility and pan sizes are updated
- internal `_tix/_tiy/_tiw/_tih` dimensions are updated

`_tree_w/_tree_h` include the tree's margins (e.g. `marginleft()`), whether items are open or closed, label contents and font sizes, etc.

The tree hierarchy's size is managed separately from the widget's size as an optimization; this way `resize()` on the widget doesn't involve recalculating the tree's hierarchy needlessly, as widget size has no bearing on the tree hierarchy.

The tree hierarchy's size only changes when items are added/removed, open/closed, label contents or font sizes changed, margins changed, etc.

This calculation involves walking the *entire* tree from top to bottom, potentially a slow calculation if the tree has many items (potentially hundreds of thousands), and should therefore be called sparingly.

For this reason, `recalc_tree()` is used as a way to /schedule/ calculation when changes affect the tree hierarchy's size.

Apps may want to call this method directly if the app makes changes to the tree's geometry, then immediately needs to work with the tree's new dimensions before an actual redraw (and recalc) occurs. (This use by an app should only rarely be needed)

9.143.2.5 callback_item() [1/2]

```
Fl_Tree_Item * Fl_Tree::callback_item ( )
```

Gets the item that caused the callback.

The `callback()` can use this value to see which item changed.

9.143.2.6 callback_item() [2/2]

```
void Fl_Tree::callback_item (
    Fl_Tree_Item * item )
```

Sets the item that was changed for this callback.
Used internally to pass the item that invoked the callback.

9.143.2.7 callback_reason() [1/2]

```
Fl_Tree_Reason Fl_Tree::callback_reason ( ) const
```

Gets the reason for this callback.

The [callback\(\)](#) can use this value to see why it was called. Example:

```
void MyTreeCallback(Fl_Widget *w, void *userdata) {
    Fl_Tree *tree = (Fl_Tree*)w;
    Fl_Tree_Item *item = tree->callback_item();    // the item changed (can be NULL if more than one item
    was changed!)
    switch ( tree->callback_reason() ) {           // reason callback was invoked
        case FL_TREE_REASON_OPENED: ..item was opened..
        case FL_TREE_REASON_CLOSED: ..item was closed..
        case FL_TREE_REASON_SELECTED: ..item was selected..
        case FL_TREE_REASON_RESELECTED: ..item was reselected (double-clicked, etc)..
        case FL_TREE_REASON_DESELECTED: ..item was deselected..
    }
}
```

See also

[item_reselect_mode\(\)](#) – enables `FL_TREE_REASON_RESELECTED` events

9.143.2.8 callback_reason() [2/2]

```
void Fl_Tree::callback_reason (
    Fl_Tree_Reason reason )
```

Sets the reason for this callback.
Used internally to pass the reason the callback was invoked.

9.143.2.9 clear()

```
void Fl_Tree::clear ( )
```

Clear the entire tree's children, including the root.
The tree will be left completely empty.

9.143.2.10 clear_children()

```
void Fl_Tree::clear_children (
    Fl_Tree_Item * item )
```

Clear all the children for 'item'.
Item may not be NULL.

9.143.2.11 close() [1/2]

```
int Fl_Tree::close (
    const char * path,
    int docallback = 1 )
```

Closes the item specified by 'path'.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes (/ or \) should be escaped, e.g. `close("Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
----	-------------	--

Parameters

in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_CLOSED</code>
----	-------------------	--

Returns

- 1 – OK: item closed
- 0 – OK: item was already closed, no change
- -1 – ERROR: item was not found

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

9.143.2.12 close() [2/2]

```
int Fl_Tree::close (
    Fl_Tree_Item * item,
    int docallback = 1 )
```

Closes the specified 'item'.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be closed. Must not be NULL.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_CLOSED</code>

Returns

- 1 – item was closed
- 0 – item was already closed, no change

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

9.143.2.13 closeicon() [1/2]

```
Fl_Image * Fl_Tree::closeicon ( ) const
```

Returns the icon to be used as the 'close' icon.

If none was set, the internal default is returned, a simple '[' icon.

9.143.2.14 closeicon() [2/2]

```
void Fl_Tree::closeicon (
    Fl_Image * val )
```

Sets the icon to be used as the 'close' icon.
This overrides the built in default '[-]' icon.

Parameters

in	<i>val</i>	– The new image, or zero to use the default '[-]' icon.
----	------------	---

9.143.2.15 connectorstyle()

```
void Fl_Tree::connectorstyle (
    Fl_Tree_Connector val )
```

Sets the line drawing style for inter-connecting items.
See [Fl_Tree_Connector](#) for possible values.

9.143.2.16 deselect() [1/2]

```
int Fl_Tree::deselect (
    const char * path,
    int docalback = 1 )
```

Deselect an item specified by 'path'.

Invokes the callback depending on the value of optional parameter 'docalback'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `deselect("← Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
in	<i>docalback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be <code>FL_TREE_REASON_DESELECTED</code>

Returns

- 1 - OK: item's state was changed
- 0 - OK: item was already deselected, no change was made
- -1 - ERROR: item was not found

9.143.2.17 deselect() [2/2]

```
int Fl_Tree::deselect (
    Fl_Tree_Item * item,
    int docalback = 1 )
```

Deselect the specified *item*.

Invokes the callback depending on the value of optional parameter 'docalback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be deselected. Must not be NULL.
in	<i>docalcallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be FL_TREE_REASON_DESELECTED

Returns

- 0 - item was already deselected, no change was made
- 1 - item's state was changed

9.143.2.18 `deselect_all()`

```
int Fl_Tree::deselect_all (
    Fl_Tree_Item * item = 0,
    int docalcallback = 1 )
```

Deselect '*item*' and all its children.

If item is NULL, [first\(\)](#) is used.

Invokes the callback depending on the value of optional parameter '*docalcallback*'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	The item that will be deselected (along with all its children). If NULL, first() is used.
in	<i>docalcallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked for each item that changed state (default), callback_reason() will be FL_TREE_REASON_DESELECTED

Returns

Count of how many items were actually changed to the deselected state.

9.143.2.19 `display()`

```
void Fl_Tree::display (
    Fl_Tree_Item * item )
```

Displays '*item*', scrolling the tree as necessary.

Parameters

in	<i>item</i>	The item to be displayed. If NULL, first() is used.
----	-------------	---

9.143.2.20 `displayed()`

```
int Fl_Tree::displayed (
    Fl_Tree_Item * item )
```

See if 'item' is currently displayed on-screen (visible within the widget).

This can be used to detect if the item is scrolled off-screen. Checks to see if the item's vertical position is within the top and bottom edges of the display window. This does NOT take into account the [hide\(\)](#) / [show\(\)](#) or [open\(\)](#) / [close\(\)](#) status of the item.

Parameters

in	<i>item</i>	The item to be checked. If NULL, first() is used.
----	-------------	---

Returns

1 if displayed, 0 if scrolled off screen or no items are in tree.

9.143.2.21 draw()

```
void Fl_Tree::draw (
    void ) [virtual]
```

Standard FLTK [draw\(\)](#) method, handles drawing the tree widget.

Reimplemented from [Fl_Group](#).

9.143.2.22 extend_selection()

```
int Fl_Tree::extend_selection (
    Fl_Tree_Item * from,
    Fl_Tree_Item * to,
    int val = 1,
    bool visible = false )
```

Extend a selection between 'from' and 'to' depending on 'visible'.

Similar to the more efficient [extend_selection_dir\(Fl_Tree_Item*,Fl_Tree_Item*,int dir,int val,bool vis\)](#) method, but direction (up or down) doesn't need to be known.

We're less efficient because we search the tree for to/from, then operate on items in between. The more efficient method avoids the "search", but necessitates a direction to be specified to find 'to'.

Used by SHIFT-click to extend a selection between two items inclusive.

Handles calling [redraw\(\)](#) if anything changed.

Parameters

in	<i>from</i>	Starting item
in	<i>to</i>	Ending item
in	<i>val</i>	Select or deselect items (0=deselect, 1=select, 2=toggle)
in	<i>visible</i>	true=affect only open() , visible items, false=affect open or closed items (default)

Returns

The number of items whose selection states were changed, if any.

Version

1.3.3 ABI feature

9.143.2.23 extend_selection_dir()

```
int Fl_Tree::extend_selection_dir (
    Fl_Tree_Item * from,
    Fl_Tree_Item * to,
```

```

    int dir,
    int val,
    bool visible )

```

Extend the selection between and including 'from' and 'to' depending on direction 'dir', 'val', and 'visible'.

Efficient: does not walk entire tree; starts with 'from' and stops at 'to' while moving in direction 'dir'. Dir must be specified though. If dir cannot be known in advance, such as during SHIFT-click operations, the method [extend_selection\(Fl_Tree_Item*,Fl_Tree_Item*,int,bool\)](#) should be used. Handles calling [redraw\(\)](#) if anything changed.

Parameters

in	<i>from</i>	Starting item
in	<i>to</i>	Ending item
in	<i>dir</i>	Direction to extend selection (FL_Up or FL_Down)
in	<i>val</i>	0=deselect, 1=select, 2=toggle
in	<i>visible</i>	true=affect only open() , visible items, false=affect open or closed items (default)

Returns

The number of items whose selection states were changed, if any.

Version

1.3.3

9.143.2.24 find_clicked()

```

const Fl_Tree_Item * Fl_Tree::find_clicked (
    int yonly = 0 ) const

```

Find the item that was last clicked on.

You should use [callback_item\(\)](#) instead, which is fast, and is meant to be used within a callback to determine the item clicked.

This method walks the entire tree looking for the first item that is under the mouse. (The value of the 'yonly' flag affects whether both x and y events are checked, or just y)

Use this method /only/ if you've subclassed [Fl_Tree](#), and are receiving events before [Fl_Tree](#) has been able to process and update [callback_item\(\)](#).

Parameters

in	<i>yonly</i>	- 0: check both event's X and Y values. - 1: only check event's Y value, don't care about X.
----	--------------	--

Returns

The item clicked, or NULL if no item was under the current event.

Version

1.3.0

1.3.3 ABI feature: added yonly parameter

9.143.2.25 find_item()

```

const Fl_Tree_Item * Fl_Tree::find_item (
    const char * path ) const

```

Find the item, given a menu style path, e.g.

"/Parent/Child/item". There is both a const and non-const version of this method. Const version allows pure const methods to use this method to do lookups without causing compiler errors.

To specify items or submenus that contain slashes ('/' or '\') use an escape character to protect them, e.g.

```
tree->add("/Holidays/Photos/12\\25\\2010"); // Adds item "12/25/2010"
tree->add("/Pathnames/c:\\\\Program Files\\\\MyApp"); // Adds item "c:\Program Files\MyApp"
```

Parameters

<code>in</code>	<code>path</code>	– the tree item's pathname to be found (e.g. "Flintstones/Fred")
-----------------	-------------------	--

Returns

The item, or NULL if not found.

See also

[item_pathname\(\)](#)

9.143.2.26 first()

```
Fl_Tree_Item * Fl_Tree::first ( )
```

Returns the first item in the tree, or 0 if none.

Use this to walk the tree in the forward direction, e.g.

```
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) )
    printf("Item: %s\n", item->label());
```

Returns

First item in tree, or 0 if none (tree empty).

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

9.143.2.27 first_selected_item()

```
Fl_Tree_Item * Fl_Tree::first_selected_item ( )
```

Returns the first selected item in the tree.

Use this to walk the tree from top to bottom looking for all the selected items, e.g.

```
// Walk tree forward, from top to bottom
for ( Fl_Tree_Item *i=tree->first_selected_item(); i; i=tree->next_selected_item(i) )
    printf("Selected item: %s\n", i->label());
```

Returns

The first selected item, or 0 if none.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

9.143.2.28 first_visible()

```
Fl_Tree_Item * Fl_Tree::first_visible ( )
```

Returns the first [open\(\)](#), visible item in the tree, or 0 if none.

Deprecated in 1.3.3 ABI – use [first_visible_item\(\)](#) instead.

9.143.2.29 first_visible_item()

`Fl_Tree_Item * Fl_Tree::first_visible_item ()`
 Returns the first [open\(\)](#), visible item in the tree, or 0 if none.

Returns

First visible item in tree, or 0 if none.

See also

[first_visible_item\(\)](#), [last_visible_item\(\)](#), [next_visible_item\(\)](#)

Version

1.3.3

9.143.2.30 get_selected_items()

```
int Fl_Tree::get_selected_items (
    Fl_Tree_Item_Array & ret_items )
```

Returns the currently selected items as an array of 'ret_items'.

Example:

```
// Get selected items as an array
Fl_Tree_Item_Array items;
tree->get_selected_items(items);
// Manipulate the returned array
for ( int t=0; t<items.total(); t++ ) {
    Fl_Tree_Item &item = items[t];
    ..do stuff with each selected item..
}
```

Parameters

out	<i>ret_items</i>	The returned array of selected items.
-----	------------------	---------------------------------------

Returns

The number of items in the returned array.

See also

[first_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3 ABI feature

9.143.2.31 handle()

```
int Fl_Tree::handle (
    int e ) [virtual]
```

Standard FLTK event handler for this widget.

Todo add [Fl_Widget_Tracker](#) (see [Fl_Browser_.cxx::handle\(\)](#))

Reimplemented from [Fl_Group](#).

9.143.2.32 hposition() [1/2]

```
int Fl_Tree::hposition ( ) const
```

Returns the horizontal scroll position as a pixel offset.

The position returned is how many pixels of the tree are scrolled off the left edge of the screen.

See also

[hposition\(int\)](#), [vposition\(\)](#), [vposition\(int\)](#)

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

9.143.2.33 hposition() [2/2]

```
void Fl_Tree::hposition (
    int pos )
```

Sets the horizontal scroll offset to position 'pos'.

The position is how many pixels of the tree are scrolled off the left edge of the screen.

Parameters

in	<i>pos</i>	The vertical position (in pixels) to scroll the tree to.
----	------------	--

See also

[hposition\(\)](#), [vposition\(\)](#), [vposition\(int\)](#)

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

9.143.2.34 insert()

```
Fl_Tree_Item * Fl_Tree::insert (
    Fl_Tree_Item * item,
    const char * name,
    int pos )
```

Insert a new item 'name' into 'item's children at position 'pos'.

If pos is out of range the new item is

- prepended if `pos < 0` or
- appended if `pos > item->children()`.

Note: `pos == children()` is not considered out of range: the item is appended to the child list. Example:

```
tree->add("Aaa/000"); // "000" is index 0 in Aaa's children
tree->add("Aaa/111"); // "111" is index 1 in Aaa's children
tree->add("Aaa/222"); // "222" is index 2 in Aaa's children
..
// How to use insert() to insert a new item between Aaa/111 + Aaa/222
Fl_Tree_Item *item = tree->find_item("Aaa"); // get parent item Aaa
if (item) tree->insert(item, "New item", 2); // insert as a child of Aaa at index #2
```

Parameters

in	<i>item</i>	The existing item to insert new child into. Must not be NULL.
in	<i>name</i>	The label for the new item
in	<i>pos</i>	The position of the new item in the child list

Returns

The new item added.

See also

[insert_above\(\)](#)

9.143.2.35 insert_above()

```
Fl_Tree_Item * Fl_Tree::insert_above (
    Fl_Tree_Item * above,
    const char * name )
```

Inserts a new item 'name' above the specified [Fl_Tree_Item](#) 'above'.

Example:

```
tree->add("Aaa/000"); // "000" is index 0 in Aaa's children
tree->add("Aaa/111"); // "111" is index 1 in Aaa's children
tree->add("Aaa/222"); // "222" is index 2 in Aaa's children
..
// How to use insert_above() to insert a new item above Aaa/222
Fl_Tree_Item *item = tree->find_item("Aaa/222"); // get item Aaa/222
if (item) tree->insert_above(item, "New item"); // insert new item above it
```

Parameters

in	<i>above</i>	– the item above which to insert the new item. Must not be NULL.
in	<i>name</i>	– the name of the new item

Returns

The new item added, or 0 if 'above' could not be found.

See also

[insert\(\)](#)

9.143.2.36 is_close() [1/2]

```
int Fl_Tree::is_close (
    const char * path ) const
```

See if item specified by 'path' is closed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_close("← Holidays/12\25\2010")`.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
----	-------------	--

Returns

- 1 - OK: item is closed
- 0 - OK: item is open
- -1 - ERROR: item was not found

9.143.2.37 is_close() [2/2]

```
int Fl_Tree::is_close (
    Fl_Tree_Item * item ) const
```

See if the specified 'item' is closed.

Parameters

in	<i>item</i>	– the item to be tested. Must not be NULL.
----	-------------	--

Returns

- 1 : item is closed
- 0 : item is open

9.143.2.38 is_hscroll_visible()

```
int Fl_Tree::is_hscroll_visible ( ) const
```

See if the horizontal scrollbar is currently visible.

Returns

1 if scrollbar visible, 0 if not.

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

9.143.2.39 is_open() [1/2]

```
int Fl_Tree::is_open (
    const char * path ) const
```

See if item specified by 'path' is open.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_open("← Holidays/12\25\2010")`.

Items that are 'open' are themselves not necessarily visible; one of the item's parents might be closed.

Parameters

<code>in</code>	<code>path</code>	– the tree item's pathname (e.g. "Flintstones/Fred")
-----------------	-------------------	--

Returns

- 1 - OK: item is open
- 0 - OK: item is closed
- -1 - ERROR: item was not found

See also

[Fl_Tree_Item::visible_r\(\)](#)

9.143.2.40 is_open() [2/2]

```
int Fl_Tree::is_open (
    Fl_Tree_Item * item ) const
```

See if 'item' is open.

Items that are 'open' are themselves not necessarily visible; one of the item's parents might be closed.

Parameters

<code>in</code>	<code>item</code>	– the item to be tested. Must not be NULL.
-----------------	-------------------	--

Returns

- 1 : item is open
- 0 : item is closed

9.143.2.41 is_scrollbar()

```
int Fl_Tree::is_scrollbar (
    Fl_Widget * w )
```

See if widget 'w' is one of the [Fl_Tree](#) widget's scrollbars.

Use this to skip over the scrollbars when walking the [child\(\)](#) array. Example:

```
for ( int i=0; i<tree->children(); i++ ) { // walk children
    Fl_Widget *w = tree->child(i);
    if ( tree->is_scrollbar(w) ) continue; // skip scrollbars
    ..do work here..
}
```

Parameters

in	w	Widget to test
----	---	----------------

Returns

1 if w is a scrollbar, 0 if not.

Todo should be const

9.143.2.42 is_selected() [1/2]

```
int Fl_Tree::is_selected (
    const char * path )
```

See if item specified by 'path' is selected.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_selected("← Holidays/12\25\2010")`.

Parameters

in	path	– the tree item's pathname (e.g. "Flintstones/Fred")
----	------	--

Returns

- 1 : item selected
- 0 : item deselected
- -1 : item was not found

9.143.2.43 is_selected() [2/2]

```
int Fl_Tree::is_selected (
    Fl_Tree_Item * item ) const
```

See if the specified 'item' is selected.

Parameters

in	item	– the item to be tested. Must not be NULL.
----	------	--

Returns

- 1 : item selected
- 0 : item deselected

9.143.2.44 is_vscroll_visible()

```
int Fl_Tree::is_vscroll_visible ( ) const
```

See if the vertical scrollbar is currently visible.

Returns

1 if scrollbar visible, 0 if not.

9.143.2.45 `item_clicked()` [1/2]

```
Fl_Tree_Item * Fl_Tree::item_clicked ( )
```

Return the item that was last clicked.

Valid only from within the `callback()`.

Returns

The item clicked, or 0 if none. 0 may also be used to indicate several items were clicked/changed.

Deprecated in 1.3.3 ABI – use `callback_item()` instead.

9.143.2.46 `item_clicked()` [2/2]

```
void Fl_Tree::item_clicked (
    Fl_Tree_Item * item ) [protected]
```

Set the item that was last clicked.

Should only be used by subclasses needing to change this value. Normally `Fl_Tree` manages this value.

Deprecated in 1.3.3 ABI – use `callback_item()` instead.

9.143.2.47 `item_draw_mode()` [1/3]

```
Fl_Tree_Item_Draw_Mode Fl_Tree::item_draw_mode ( ) const
```

Get the 'item draw mode' used for the tree.

Version

1.3.1 ABI feature

9.143.2.48 `item_draw_mode()` [2/3]

```
void Fl_Tree::item_draw_mode (
    Fl_Tree_Item_Draw_Mode mode )
```

Set the 'item draw mode' used for the tree to 'mode'.

This affects how items in the tree are drawn, such as when a `widget()` is defined. See `Fl_Tree_Item_Draw_Mode` for possible values.

Version

1.3.1 ABI feature

9.143.2.49 `item_draw_mode()` [3/3]

```
void Fl_Tree::item_draw_mode (
    int mode )
```

Set the 'item draw mode' used for the tree to integer 'mode'.

This affects how items in the tree are drawn, such as when a `widget()` is defined. See `Fl_Tree_Item_Draw_Mode` for possible values.

Version

1.3.1 ABI feature

9.143.2.50 item_labelbgcolor() [1/2]

```
void Fl_Tree::item_labelbgcolor (
    Fl_Color val )
```

Set the default label background color used for creating new items.

A special case is made for color 0xffffffff (default) which is treated as 'transparent'. To change the background color on a per-item basis, use [Fl_Tree_Item::labelbgcolor\(Fl_Color\)](#)

9.143.2.51 item_labelbgcolor() [2/2]

```
Fl_Color Fl_Tree::item_labelbgcolor (
    void ) const
```

Get the default label background color used for creating new items.

If the color is 0xffffffff, it is 'transparent'.

9.143.2.52 item_labelfgcolor()

```
void Fl_Tree::item_labelfgcolor (
    Fl_Color val )
```

Set the default label foreground color used for creating new items.

To change the foreground color on a per-item basis, use [Fl_Tree_Item::labelfgcolor\(Fl_Color\)](#)

9.143.2.53 item_labelfont()

```
void Fl_Tree::item_labelfont (
    Fl_Font val )
```

Set the default font face used for creating new items.

To change the font face on a per-item basis, use [Fl_Tree_Item::labelfont\(Fl_Font\)](#)

9.143.2.54 item_labelsize()

```
void Fl_Tree::item_labelsize (
    Fl_Fontsize val )
```

Set the default label font size used for creating new items.

To change the font size on a per-item basis, use [Fl_Tree_Item::labelsizes\(Fl_Fontsize\)](#)

9.143.2.55 item_pathname()

```
int Fl_Tree::item_pathname (
    char * pathname,
    int pathnamelen,
    const Fl_Tree_Item * item ) const
```

Return 'pathname' of size 'pathnamelen' for the specified 'item'.

If 'item' is NULL, [root\(\)](#) is used.

The tree's root will be included in the pathname if [showroot\(\)](#) is on.

Menu items or submenus that contain slashes ('/' or '\') in their names will be escaped with a backslash. This is symmetrical with the [add\(\)](#) function which uses the same escape pattern to set names.

Parameters

out	<i>pathname</i>	The string to use to return the pathname
in	<i>pathnamelen</i>	The maximum length of the string (including NULL). Must not be zero.
in	<i>item</i>	The item whose pathname is to be returned.

Returns

- 0 : OK (*pathname* returns the item's pathname)
- -1 : item not found (*pathname*="")
- -2 : *pathname* not large enough (*pathname*="")

See also

[find_item\(\)](#)

9.143.2.56 item_reselect_mode() [1/2]

`Fl_Tree_Item_Reselect_Mode` `Fl_Tree::item_reselect_mode () const`
Returns the current item re/selection mode.

Version

1.3.1 ABI feature

9.143.2.57 item_reselect_mode() [2/2]

```
void Fl_Tree::item_reselect_mode (
    Fl_Tree_Item_Reselect_Mode mode )
```

Sets the item re/selection mode.

See [Fl_Tree_Item_Reselect_Mode](#) for possible values.

Version

1.3.1 ABI feature

9.143.2.58 last()

```
Fl_Tree_Item * Fl_Tree::last ( )
```

Returns the last item in the tree.

This can be used to walk the tree in reverse, e.g.

```
for ( Fl_Tree_Item *item = tree->last(); item; item = tree->prev() )
    printf("Item: %s\n", item->label());
```

Returns

Last item in the tree, or 0 if none (tree empty).

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

9.143.2.59 last_selected_item()

```
Fl_Tree_Item * Fl_Tree::last_selected_item ( )
```

Returns the last selected item in the tree.

Use this to walk the tree in reverse from bottom to top looking for all the selected items, e.g.

```
// Walk tree in reverse, from bottom to top
for ( Fl_Tree_Item *i=tree->last_selected_item(); i; i=tree->next_selected_item(i, FL_Up) )
    printf("Selected item: %s\n", i->label());
```

Returns

The last selected item, or 0 if none.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

9.143.2.60 last_visible()

`Fl_Tree_Item * Fl_Tree::last_visible ()`
 Returns the last `open()`, visible item in the tree.

Deprecated in 1.3.3 – use `last_visible_item()` instead.

9.143.2.61 last_visible_item()

`Fl_Tree_Item * Fl_Tree::last_visible_item ()`
 Returns the last `open()`, visible item in the tree.

Returns

Last visible item in the tree, or 0 if none.

See also

`first_visible_item()`, `last_visible_item()`, `next_visible_item()`

Version

1.3.3

9.143.2.62 load()

```
void Fl_Tree::load (
    class Fl_Preferences & prefs )
```

Load FLTK preferences.

Read a preferences database into the tree widget.

A preferences database is a hierarchical collection of data which can be directly loaded into the tree view for inspection.

Parameters

<code>in</code>	<code>prefs</code>	the <code>Fl_Preferences</code> database
-----------------	--------------------	--

9.143.2.63 next()

```
Fl_Tree_Item * Fl_Tree::next (
    Fl_Tree_Item * item = 0 )
```

Return the next item after '`item`', or 0 if no more items.

Use this code to walk the entire tree:

```
for ( Fl_Tree_Item *i = tree->first(); i; i = tree->next(i) )
    printf("Item: %s\n", i->label());
```

Parameters

<code>in</code>	<code>item</code>	The item to use to find the next item. If NULL, returns 0.
-----------------	-------------------	--

Returns

Next item in tree, or 0 if at last item.

See also

`first()`, `next()`, `last()`, `prev()`

9.143.2.64 next_item()

```
Fl_Tree_Item * Fl_Tree::next_item (
    Fl_Tree_Item * item,
    int dir = FL_Down,
    bool visible = false )
```

Returns next item after 'item' in direction 'dir' depending on 'visible'.

Next item will be above (if dir==FL_Up) or below (if dir==FL_Down). If 'visible' is true, only items whose parents are [open\(\)](#) will be returned. If 'visible' is false, even items whose parents are [close\(\)](#)ed will be returned.

If item is 0, the return value will be the result of this truth table:

	visible=true	visible=false
dir=FL_Up:	last_visible_item()	last()
dir=FL_Down:	first_visible_item()	first()

Example use:

```
// Walk down the tree showing open(), visible items
for ( Fl_Tree_Item *i=tree->first_visible_item(); i; i=tree->next_item(i, FL_Down, true) )
    printf("Item: %s\n", i->label());

// Walk up the tree showing open(), visible items
for ( Fl_Tree_Item *i=tree->last_visible_item(); i; i=tree->next_item(i, FL_Up, true) )
    printf("Item: %s\n", i->label());

// Walk down the tree showing all items (open or closed)
for ( Fl_Tree_Item *i=tree->first(); i; i=tree->next_item(i, FL_Down, false) )
    printf("Item: %s\n", i->label());

// Walk up the tree showing all items (open or closed)
for ( Fl_Tree_Item *i=tree->last(); i; i=tree->next_item(i, FL_Up, false) )
    printf("Item: %s\n", i->label());
```

Parameters

in	<i>item</i>	The item to use to find the next item. If NULL, returns 0.
in	<i>dir</i>	Can be FL_Up or FL_Down (default=FL_Down or 'next')
in	<i>visible</i>	true=return only open() , visible items, false=return open or closed items (default)

Returns

Next item in tree in the direction and visibility specified, or 0 if no more items of specified visibility in that direction.

See also

[first\(\)](#), [last\(\)](#), [next\(\)](#),
[first_visible_item\(\)](#), [last_visible_item\(\)](#), [next_visible_item\(\)](#),
[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

9.143.2.65 next_selected_item()

```
Fl_Tree_Item * Fl_Tree::next_selected_item (
    Fl_Tree_Item * item = 0,
    int dir = FL_Down )
```

Returns the next selected item above or below 'item', depending on 'dir'.

If 'item' is 0, search starts at either [first\(\)](#) or [last\(\)](#), depending on 'dir': [first\(\)](#) if 'dir' is FL_Down (default), [last\(\)](#) if 'dir' is FL_Up.

Use this to walk the tree looking for all the selected items, e.g.

```
// Walk down the tree (forwards)
for ( Fl_Tree_Item *i=tree->first_selected_item(); i; i=tree->next_selected_item(i, FL_Down) )
    printf("Item: %s\n", i->label());

// Walk up the tree (backwards)
for ( Fl_Tree_Item *i=tree->last_selected_item(); i; i=tree->next_selected_item(i, FL_Up) )
    printf("Item: %s\n", i->label());
```

Parameters

in	<i>item</i>	The item above or below which we'll find the next selected item. If NULL, first() is used if FL_Down, last() if FL_Up. (default=NULL)
in	<i>dir</i>	The direction to go. FL_Up for moving up the tree, FL_Down for down the tree (default)

Returns

The next selected item, or 0 if there are no more selected items.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

9.143.2.66 next_visible_item()

```
Fl_Tree_Item * Fl_Tree::next_visible_item (
    Fl_Tree_Item * item,
    int dir )
```

Returns next [open\(\)](#), visible item above (dir==FL_Up) or below (dir==FL_Down) the specified 'item', or 0 if no more items.

If 'item' is 0, returns [last\(\)](#) if 'dir' is FL_Up, or [first\(\)](#) if dir is FL_Down.

```
// Walk down the tree (forwards)
for ( Fl_Tree_Item *i=tree->first_visible_item(); i; i=tree->next_visible_item(i, FL_Down) )
    printf("Item: %s\n", i->label());

// Walk up the tree (backwards)
for ( Fl_Tree_Item *i=tree->last_visible_item(); i; i=tree->next_visible_item(i, FL_Up) )
    printf("Item: %s\n", i->label());
```

Parameters

in	<i>item</i>	The item above/below which we'll find the next visible item
in	<i>dir</i>	The direction to search. Can be FL_Up or FL_Down.

Returns

The item found, or 0 if there's no visible items above/below the specified item.

Version

1.3.3

9.143.2.67 open() [1/2]

```
int Fl_Tree::open (
    const char * path,
    int docallback = 1 )
```

Opens the item specified by 'path'.

This causes the item's children (if any) to be shown.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `open("Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_OPENED</code>

Returns

- 1 – OK: item opened
- 0 – OK: item was already open, no change
- -1 – ERROR: item was not found

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

9.143.2.68 `open()` [2/2]

```
int Fl_Tree::open (
    Fl_Tree_Item * item,
    int docallback = 1 )
```

Open the specified 'item'.

This causes the item's children (if any) to be shown.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be opened. Must not be NULL.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_OPENED</code>

Returns

- 1 – item was opened
- 0 – item was already open, no change

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

9.143.2.69 open_toggle()

```
void Fl_Tree::open_toggle (
    Fl_Tree_Item * item,
    int docalback = 1 )
```

Toggle the open state of 'item'.

Invokes the callback depending on the value of optional parameter 'docalback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item whose open state is to be toggled. Must not be NULL.
in	<i>docalback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked (default), callback_reason() will be either FL_TREE_REASON_OPENED or FL_TREE_REASON_CLOSED

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

9.143.2.70 openicon() [1/2]

```
Fl_Image * Fl_Tree::openicon ( ) const
```

Returns the icon to be used as the 'open' icon.

If none was set, the internal default is returned, a simple '[+]' icon.

9.143.2.71 openicon() [2/2]

```
void Fl_Tree::openicon (
    Fl_Image * val )
```

Sets the icon to be used as the 'open' icon.

This overrides the built in default '[+]' icon.

Parameters

in	<i>val</i>	– The new image, or zero to use the default '[+]' icon.
----	------------	---

9.143.2.72 prev()

```
Fl_Tree_Item * Fl_Tree::prev (
    Fl_Tree_Item * item = 0 )
```

Return the previous item before 'item', or 0 if no more items.

This can be used to walk the tree in reverse, e.g.

```
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->prev(item) )
    printf("Item: %s\n", item->label());
```

Parameters

in	<i>item</i>	The item to use to find the previous item. If NULL, returns 0.
----	-------------	--

Returns

Previous item in tree, or 0 if at first item.

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

9.143.2.73 recalc_tree()

```
void Fl_Tree::recalc_tree ( )
```

Schedule tree to recalc the entire tree size.

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

9.143.2.74 remove()

```
int Fl_Tree::remove (
    Fl_Tree_Item * item )
```

Remove the specified 'item' from the tree.

item may not be NULL. If it has children, all those are removed too. If item being removed has focus, no item will have focus.

Returns

0 if done, -1 if 'item' not found.

9.143.2.75 resize()

```
void Fl_Tree::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Resizes the [Fl_Group](#) widget and all of its children.

The [Fl_Group](#) widget first resizes itself, and then it moves and resizes all its children according to the rules documented for [Fl_Group::resizable\(Fl_Widget*\)](#)

See also

[Fl_Group::resizable\(Fl_Widget*\)](#)

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

9.143.2.76 root()

```
void Fl_Tree::root (
    Fl_Tree_Item * newitem )
```

Sets the root item to 'newitem'.

If a root item already exists, [clear\(\)](#) is called first to clear it before replacing it with newitem. Use this to install a custom item (derived from [Fl_Tree_Item](#)) as the root of the tree. This allows the derived class to implement custom drawing by overriding [Fl_Tree_Item::draw_item_content\(\)](#).

Version

1.3.3

9.143.2.77 root_label()

```
void Fl_Tree::root_label (
    const char * new_label )
```

Set the label for the root item to 'new_label'.
Makes an internally managed copy of 'new_label'.

9.143.2.78 scrollbar_size() [1/2]

```
int Fl_Tree::scrollbar_size ( ) const
```

Gets the default size of scrollbars' troughs for this widget in pixels.
If this value is zero (default), this widget will use the global [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

9.143.2.79 scrollbar_size() [2/2]

```
void Fl_Tree::scrollbar_size (
    int size )
```

Sets the pixel size of the scrollbars' troughs to 'size' for this widget, in pixels.
Normally you should not need this method, and should use the global [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, and is the default behavior. Normally this is what you want.
Only use this method if you really need to override just THIS instance of the widget's scrollbar size. (This need should be rare.)
Setting *size* to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

<i>in</i>	<i>size</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
-----------	-------------	---

See also

[Fl::scrollbar_size\(\)](#)

9.143.2.80 select() [1/2]

```
int Fl_Tree::select (
    const char * path,
    int docallback = 1 )
```

Select the item specified by 'path'.
Invokes the callback depending on the value of optional parameter 'docallback'.
Handles calling [redraw\(\)](#) if anything changed.
Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `select("← Holidays/12\25\2010")`.
The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

<i>in</i>	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
-----------	-------------	--

Parameters

in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be <code>FL_TREE_REASON_SELECTED</code>
----	-------------------	--

Returns

- 1 : OK: item's state was changed
- 0 : OK: item was already selected, no change was made
- -1 : ERROR: item was not found

9.143.2.81 select() [2/2]

```
int Fl_Tree::select (
    Fl_Tree_Item * item,
    int docallback = 1 )
```

Select the specified 'item'.

Use '[deselect\(\)](#)' to deselect it.

Invokes the callback depending on the value of optional parameter *docallback*.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be selected. Must not be NULL.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state, callback_reason() will be <code>FL_TREE_REASON_SELECTED</code>

Returns

- 1 - item's state was changed
- 0 - item was already selected, no change was made

9.143.2.82 select_all()

```
int Fl_Tree::select_all (
    Fl_Tree_Item * item = 0,
    int docallback = 1 )
```

Select 'item' and all its children.

If item is NULL, [first\(\)](#) is used.

Invokes the callback depending on the value of optional parameter '*docallback*'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	The item that will be selected (along with all its children). If NULL, first() is used.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked for each item that changed state (default), callback_reason() will be FL_TREE_REASON_SELECTED

Returns

Count of how many items were actually changed to the selected state.

9.143.2.83 select_only()

```
int Fl_Tree::select_only (
    Fl_Tree_Item * selitem,
    int docallback = 1 )
```

Select only the specified item, deselecting all others that might be selected.

If 'selitem' is 0, [first\(\)](#) is used.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>selitem</i>	The item to be selected. If NULL, first() is used.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked for each item that changed state (default), callback_reason() will be either FL_TREE_REASON_SELECTED or FL_TREE_REASON_DESELECTED

Returns

The number of items whose selection states were changed, if any.

9.143.2.84 select_toggle()

```
void Fl_Tree::select_toggle (
    Fl_Tree_Item * item,
    int docallback = 1 )
```

Toggle the select state of the specified 'item'.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be selected. Must not be NULL.
----	-------------	--

Parameters

<code>in</code>	<code>docalback</code>	<p>– A flag that determines if the callback() is invoked or not:</p> <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked (default), callback_reason() will be either <code>FL_TREE_REASON_SELECTED</code> or <code>FL_TREE_REASON_DESELECTED</code>
-----------------	------------------------	--

9.143.2.85 selectbox() [1/2]

```
Fl_Boxtype Fl_Tree::selectbox ( ) const
```

Sets the style of box used to draw selected items.

This is an fltk [Fl_Boxtype](#). The default is influenced by FLTK's current [Fl::scheme\(\)](#)

9.143.2.86 selectbox() [2/2]

```
void Fl_Tree::selectbox (
    Fl_Boxtype val )
```

Gets the style of box used to draw selected items.

This is an fltk [Fl_Boxtype](#). The default is influenced by FLTK's current [Fl::scheme\(\)](#)

9.143.2.87 selectmode() [1/2]

```
Fl_Tree_Select Fl_Tree::selectmode ( ) const
```

Gets the tree's current selection mode.

See [Fl_Tree_Select](#) for possible values.

9.143.2.88 selectmode() [2/2]

```
void Fl_Tree::selectmode (
    Fl_Tree_Select val )
```

Sets the tree's selection mode.

See [Fl_Tree_Select](#) for possible values.

9.143.2.89 set_item_focus()

```
void Fl_Tree::set_item_focus (
    Fl_Tree_Item * item )
```

Set the item that currently should have keyboard focus.

Handles calling [redraw\(\)](#) to update the focus box (if it is visible).

Parameters

<code>in</code>	<code>item</code>	The item that should take focus. If NULL, none will have focus.
-----------------	-------------------	---

9.143.2.90 show_item() [1/2]

```
void Fl_Tree::show_item (
    Fl_Tree_Item * item )
```

Adjust the vertical scrollbar to show 'item' at the top of the display IF it is currently off-screen (for instance [show_item_top\(\)](#)).

If it is already on-screen, no change is made.

Parameters

<code>in</code>	<code>item</code>	The item to be shown. If NULL, first() is used.
-----------------	-------------------	---

See also

[show_item_top\(\)](#), [show_item_middle\(\)](#), [show_item_bottom\(\)](#)

9.143.2.91 show_item() [2/2]

```
void Fl_Tree::show_item (
    Fl_Tree_Item * item,
    int yoff )
```

Adjust the vertical scrollbar so that 'item' is visible 'yoff' pixels from the top of the [Fl_Tree](#) widget's display. For instance, yoff=0 will position the item at the top.

If yoff is larger than the vertical scrollbar's limit, the value will be clipped. So if yoff=100, but scrollbar's max is 50, then 50 will be used.

Parameters

in	<i>item</i>	The item to be shown. If NULL, first() is used.
in	<i>yoff</i>	The pixel offset from the top for the displayed position.

See also

[show_item_top\(\)](#), [show_item_middle\(\)](#), [show_item_bottom\(\)](#)

9.143.2.92 show_item_bottom()

```
void Fl_Tree::show_item_bottom (
    Fl_Tree_Item * item )
```

Adjust the vertical scrollbar so that 'item' is at the bottom of the display.

Parameters

in	<i>item</i>	The item to be shown. If NULL, first() is used.
----	-------------	---

9.143.2.93 show_item_middle()

```
void Fl_Tree::show_item_middle (
    Fl_Tree_Item * item )
```

Adjust the vertical scrollbar so that 'item' is in the middle of the display.

Parameters

in	<i>item</i>	The item to be shown. If NULL, first() is used.
----	-------------	---

9.143.2.94 show_item_top()

```
void Fl_Tree::show_item_top (
    Fl_Tree_Item * item )
```

Adjust the vertical scrollbar so that 'item' is at the top of the display.

Parameters

in	<i>item</i>	The item to be shown. If NULL, first() is used.
----	-------------	---

9.143.2.95 show_self()

```
void Fl_Tree::show_self ( )
```

Print the tree as 'ascii art' to stdout.
Used mainly for debugging.

Todo should be const

Version

1.3.0

9.143.2.96 showcollapse() [1/2]

```
int Fl_Tree::showcollapse ( ) const
```

Returns 1 if the collapse icon is enabled, 0 if not.

See also

[showcollapse\(int\)](#)

9.143.2.97 showcollapse() [2/2]

```
void Fl_Tree::showcollapse (
    int val )
```

Set if we should show the collapse icon or not.
If collapse icons are disabled, the user will not be able to interactively collapse items in the tree, unless the application provides some other means via [open\(\)](#) and [close\(\)](#).

Parameters

in	val	
		1: shows collapse icons (default), 0: hides collapse icons.

9.143.2.98 showroot()

```
void Fl_Tree::showroot (
    int val )
```

Set if the root item should be shown or not.

Parameters

in	val	
		1 – show the root item (default) 0 – hide the root item.

9.143.2.99 sortorder()

```
Fl_Tree_Sort Fl_Tree::sortorder ( ) const
```

Set the default sort order used when items are added to the tree.
See [Fl_Tree_Sort](#) for possible values.

9.143.2.100 usericon() [1/2]

```
Fl_Image * Fl_Tree::usericon ( ) const
```

Returns the [Fl_Image](#) being used as the default user icon for all newly created items.
Returns zero if no icon has been set, which is the default.

9.143.2.101 usericon() [2/2]

```
void Fl_Tree::usericon (
    Fl_Image * val )
```

Sets the [Fl_Image](#) to be used as the default user icon for all newly created items. If you want to specify user icons on a per-item basis, use [Fl_Tree_Item::usericon\(\)](#) instead.

Parameters

in	<i>val</i>	– The new image to be used, or zero to disable user icons.
----	------------	--

9.143.2.102 vposition() [1/2]

```
int Fl_Tree::vposition ( ) const
```

Returns the vertical scroll position as a pixel offset. The position returned is how many pixels of the tree are scrolled off the top edge of the screen.

See also

[vposition\(int\)](#), [hposition\(\)](#), [hposition\(int\)](#)

9.143.2.103 vposition() [2/2]

```
void Fl_Tree::vposition (
    int pos )
```

Sets the vertical scroll offset to position '*pos*'. The position is how many pixels of the tree are scrolled off the top edge of the screen.

Parameters

in	<i>pos</i>	The vertical position (in pixels) to scroll the tree to.
----	------------	--

See also

[vposition\(\)](#), [hposition\(\)](#), [hposition\(int\)](#)

The documentation for this class was generated from the following files:

- [Fl_Tree.H](#)
- [Fl_Tree.cxx](#)

9.144 Fl_Tree_Item Class Reference

Tree widget item.

```
#include <Fl_Tree_Item.H>
```

Public Member Functions

- void [activate](#) (int val=1)
 - Change the item's activation state to the optionally specified 'val'.*
- [Fl_Tree_Item * add](#) (const [Fl_Tree_Prefs](#) &prefs, char **arr)
 - Descend into the path specified by 'arr', and add a new child there.*
- [Fl_Tree_Item * add](#) (const [Fl_Tree_Prefs](#) &prefs, char **arr, [Fl_Tree_Item](#) *newitem)
 - Descend into path specified by 'arr' and add 'newitem' there.*
- [Fl_Tree_Item * add](#) (const [Fl_Tree_Prefs](#) &prefs, const char *new_label)
 - Add a new child to this item with the name 'new_label' and defaults from 'prefs'.*

- `FI_Tree_Item * add` (const `FI_Tree_Prefs &prefs`, const char *`new_label`, `FI_Tree_Item *newitem`)
Add 'item' as immediate child with 'new_label' and defaults from 'prefs'.
- `FI_Tree_Item * child` (int `index`)
Return the child item for the given 'index'.
- const `FI_Tree_Item * child` (int `t`) const
Return the const child item for the given 'index'.
- int `children` () const
Return the number of children this item has.
- void `clear_children` ()
Clear all the children for this item.
- void `close` ()
Close this item and all its children.
- void `deactivate` ()
Deactivate the item; the callback() won't be invoked when clicked.
- `FI_Tree_Item * deparent` (int `index`)
Deparent child at index position 'pos'.
- int `depth` () const
Returns how many levels deep this item is in the hierarchy.
- void `deselect` ()
Disable the item's selection state.
- int `deselect_all` ()
Deselect item and all its children.
- void `draw` (int X, int &Y, int W, `FI_Tree_Item *itemfocus`, int &`tree_item_xmax`, int `lastchild=1`, int `render=1`)
Draw this item and its children.
- virtual int `draw_item_content` (int `render`)
Draw the item content.
- int `event_on_collapse_icon` (const `FI_Tree_Prefs &prefs`) const
Was the event on the 'collapse' button of this item?
- int `event_on_label` (const `FI_Tree_Prefs &prefs`) const
Was event on the label() of this item?
- int `find_child` (const char *`name`)
Return the index of the immediate child of this item that has the label 'name'.
- int `find_child` (`FI_Tree_Item *item`)
Find the index number for the specified 'item' in the current item's list of children.
- `FI_Tree_Item * find_child_item` (char **`arr`)
*Non-const version of FI_Tree_Item::find_child_item(char **arr) const.*
- const `FI_Tree_Item * find_child_item` (char **`arr`) const
Find child item by descending array 'arr' of names.
- `FI_Tree_Item * find_child_item` (const char *`name`)
*Non-const version of FI_Tree_Item::find_child_item(const char *name) const.*
- const `FI_Tree_Item * find_child_item` (const char *`name`) const
Return the /immediate/ child of current item that has the label 'name'.
- `FI_Tree_Item * find_clicked` (const `FI_Tree_Prefs &prefs`, int `yonly=0`)
Non-const version of FI_Tree_Item::find_clicked(const FI_Tree_Prefs&,int) const.
- const `FI_Tree_Item * find_clicked` (const `FI_Tree_Prefs &prefs`, int `yonly=0`) const
Find the item that the last event was over.
- `FI_Tree_Item * find_item` (char **`arr`)
*Non-const version of FI_Tree_Item::find_item(char **names) const.*
- const `FI_Tree_Item * find_item` (char **`arr`) const
Find item by descending array of 'names'.
- `FI_Tree_Item` (const `FI_Tree_Item *o`)

- Copy constructor.*

 - [FI_Tree_Item](#) (const [FI_Tree_Prefs](#) &prefs)
- Constructor.*

 - [FI_Tree_Item](#) ([FI_Tree](#) *tree)
- Constructor.*

 - int **h** () const

The item's height.
- int **has_children** () const

See if this item has children.
- [FI_Tree_Item](#) * **insert** (const [FI_Tree_Prefs](#) &prefs, const char *new_label, int pos=0)

Insert a new item named 'new_label' into current item's children at a specified position 'pos'.
- [FI_Tree_Item](#) * **insert_above** (const [FI_Tree_Prefs](#) &prefs, const char *new_label)

Insert a new item named 'new_label' above this item.
- char **is_activated** () const

See if the item is activated.
- char **is_active** () const

See if the item is activated. Alias for [is_activated\(\)](#).
- int **is_close** () const

See if the item is 'closed'.
- int **is_open** () const

See if the item is 'open'.
- int **is_root** () const

Is this item the root of the tree?
- char **is_selected** () const

See if the item is selected.
- int **is_visible** () const

See if the item is visible.
- const char * **label** () const

Return the label.
- void **label** (const char *val)

Set the label to 'name'.
- int **label_h** () const

The item's label height.
- int **label_w** () const

The item's maximum label width to right edge of [FI_Tree](#)'s inner width within scrollbars.
- int **label_x** () const

The item's label x position relative to the window.
- int **label_y** () const

The item's label y position relative to the window.
- [FI_Color](#) **labelbgcolor** () const

Return item's label background text color.
- void **labelbgcolor** ([FI_Color](#) val)

Set item's label background color.
- [FI_Color](#) **labelcolor** () const

Return item's label text color. Alias for [labelfgcolor\(\)](#) const).
- void **labelcolor** ([FI_Color](#) val)

Set item's label text color. Alias for [labelfgcolor\(FI_Color\)](#).
- [FI_Color](#) **labelfgcolor** () const

Return item's label foreground text color.
- void **labelfgcolor** ([FI_Color](#) val)

Set item's label foreground text color.

- **FI_Font** **labelfont** () const
Get item's label font face.
- void **labelfont** (FI_Font val)
Set item's label font face.
- **FI_Fontsize** **labelsize** () const
Get item's label font size.
- void **labelsize** (FI_Fontsize val)
Set item's label font size.
- int **move** (FI_Tree_Item *item, int op=0, int pos=0)
Move the current item above/below/into the specified 'item', where 'op' determines the type of move:
- int **move** (int to, int from)
Move the item 'from' to sibling position of 'to'.
- int **move_above** (FI_Tree_Item *item)
Move the current item above the specified 'item'.
- int **move_below** (FI_Tree_Item *item)
Move the current item below the specified 'item'.
- int **move_into** (FI_Tree_Item *item, int pos=0)
Parent the current item as a child of the specified 'item'.
- FI_Tree_Item * **next** ()
Return the next item in the tree.
- FI_Tree_Item * **next_displayed** (FI_Tree_Prefs &prefs)
Same as next_visible().
- FI_Tree_Item * **next_sibling** ()
Return this item's next sibling.
- FI_Tree_Item * **next_visible** (FI_Tree_Prefs &prefs)
Return the next open(), visible() item.
- void **open** ()
Open this item and all its children.
- void **open_toggle** ()
Toggle the item's open/closed state.
- FI_Tree_Item * **parent** ()
Return the parent for this item. Returns NULL if we are the root.
- const FI_Tree_Item * **parent** () const
Return the const parent for this item. Returns NULL if we are the root.
- void **parent** (FI_Tree_Item *val)
Set the parent for this item.
- const FI_Tree_Prefs & **prefs** () const
Return the parent tree's prefs.
- FI_Tree_Item * **prev** ()
Return the previous item in the tree.
- FI_Tree_Item * **prev_displayed** (FI_Tree_Prefs &prefs)
Same as prev_visible().
- FI_Tree_Item * **prev_sibling** ()
Return this item's previous sibling.
- FI_Tree_Item * **prev_visible** (FI_Tree_Prefs &prefs)
Return the previous open(), visible() item.
- int **remove_child** (const char *new_label)
Remove immediate child (and its children) by its label 'name'.
- int **remove_child** (FI_Tree_Item *item)
Remove 'item' from the current item's children.
- int **reparent** (FI_Tree_Item *newchild, int index)

- Reparent specified item as a child of ourself at position 'pos'.*

 - `FI_Tree_Item * replace (FI_Tree_Item *new_item)`
Replace the current item with a new item.
 - `FI_Tree_Item * replace_child (FI_Tree_Item *olditem, FI_Tree_Item *newitem)`
Replace existing child 'olditem' with 'newitem'.
 - `void select (int val=1)`
Change the item's selection state to the optionally specified 'val'.
 - `int select_all ()`
Select item and all its children.
 - `void select_toggle ()`
Toggle the item's selection state.
 - `void show_self (const char *indent="") const`
Print the tree as 'ascii art' to stdout.
 - `int swap_children (FI_Tree_Item *a, FI_Tree_Item *b)`
Swap two of our immediate children, given item pointers.
 - `void swap_children (int ax, int bx)`
Swap two of our children, given two child index values 'ax' and 'bx'.
 - `FI_Tree * tree ()`
Return the tree for this item.
 - `const FI_Tree * tree () const`
Return the tree for this item.
 - `void update_prev_next (int index)`
Update our _prev_sibling and _next_sibling pointers to point to neighbors given index as being our current position in the parent's item array.
 - `void * user_data () const`
Retrieve the user-data value that has been assigned to the item.
 - `void user_data (void *data)`
Set a user-data value for the item.
 - `FI_Image * userdeicon () const`
Return the deactivated version of the user icon, if any.
 - `void userdeicon (FI_Image *val)`
Set the usericon to draw when the item is deactivated.
 - `FI_Image * usericon () const`
Get the item's user icon as an FI_Image. Returns '0' if disabled.
 - `void usericon (FI_Image *val)`
Set the item's user icon to an FI_Image.
 - `int visible () const`
See if the item is visible. Alias for is_visible().
 - `int visible_r () const`
See if item and all its parents are open() and visible().
 - `int w () const`
The entire item's width to right edge of FI_Tree's inner width within scrollbars.
 - `FI_Widget * widget () const`
Return FLTK widget assigned to this item.
 - `void widget (FI_Widget *val)`
Assign an FLTK widget to this item.
 - `int x () const`
The item's x position relative to the window.
 - `int y () const`
The item's y position relative to the window.

Protected Member Functions

- void `_Init` (const `Fl_Tree_Prefs` &prefs, `Fl_Tree` *tree)
- int `calc_item_height` (const `Fl_Tree_Prefs` &prefs) const
Return the item's 'visible' height.
- void `draw_horizontal_connector` (int x1, int x2, int y, const `Fl_Tree_Prefs` &prefs)
Internal: Horizontal connector line based on preference settings.
- void `draw_vertical_connector` (int x, int y1, int y2, const `Fl_Tree_Prefs` &prefs)
Internal: Vertical connector line based on preference settings.
- `Fl_Color` `drawbgcolor` () const
Returns the recommended background color used for drawing this item.
- `Fl_Color` `drawfgcolor` () const
Returns the recommended foreground color used for drawing this item.
- void `hide_widgets` ()
Internal: Hide the FLTK `widget()` for this item and all children.
- int `is_flag` (unsigned short val) const
See if flag set. Returns 0 or 1.
- void `recalc_tree` ()
Call this when our geometry is changed.
- void `set_flag` (unsigned short flag, int val)
Set a flag to an on or off value. val is 0 or 1.
- void `show_widgets` ()
Internal: Show the FLTK `widget()` for this item and all children.

9.144.1 Detailed Description

Tree widget item.

This class is a single tree item, and manages all of the item's attributes. `Fl_Tree_Item` is used by `Fl_Tree`, which is comprised of many instances of `Fl_Tree_Item`.

`Fl_Tree_Item` is hierarchical; it dynamically manages an `Fl_Tree_Item_Array` of children that are themselves instances of `Fl_Tree_Item`. Each item can have zero or more children. When an item has children, `close()` and `open()` can be used to hide or show them.

Items have their own attributes; font size, face, color. Items maintain their own hierarchy of children.

When you make changes to items, you'll need to tell the tree to `redraw()` for the changes to show up.

New 1.3.3 ABI feature: You can define custom items by either adding a custom widget to the item with `Fl_Tree_Item::widget()`, or override the `draw_item_content()` method if you want to just redefine how the label is drawn.

The following shows the `Fl_Tree_Item`'s dimensions, useful when overriding the `draw_item_content()` method:

Figure 9.47 `Fl_Tree_Item`'s internal dimensions.

9.144.2 Constructor & Destructor Documentation

9.144.2.1 `Fl_Tree_Item()` [1/2]

```
Fl_Tree_Item::Fl_Tree_Item (
    const Fl_Tree_Prefs & prefs )
```

Constructor.

Makes a new instance of `Fl_Tree_Item` using defaults from 'prefs'.

Deprecated in 1.3.3 ABI – you must use `Fl_Tree_Item(Fl_Tree*)` for proper horizontal scrollbar behavior.

9.144.2.2 Fl_Tree_Item() [2/2]

```
Fl_Tree_Item::Fl_Tree_Item (
    Fl_Tree * tree )
```

Constructor.

Makes a new instance of `Fl_Tree_Item` for 'tree'.

This must be used instead of the older, deprecated `Fl_Tree_Item(Fl_Tree_Prefs)` constructor for proper horizontal scrollbar calculation.

Version

1.3.3 ABI feature

9.144.3 Member Function Documentation

9.144.3.1 activate()

```
void Fl_Tree_Item::activate (
    int val = 1 ) [inline]
```

Change the item's activation state to the optionally specified 'val'.

When deactivated, the item will be 'grayed out'; the `callback()` won't be invoked if the user clicks on the label. If a `widget()` is associated with the item, its activation state will be changed as well.

If 'val' is not specified, the item will be activated.

9.144.3.2 add() [1/4]

```
Fl_Tree_Item * Fl_Tree_Item::add (
    const Fl_Tree_Prefs & prefs,
    char ** arr )
```

Descend into the path specified by 'arr', and add a new child there.

Should be used only by `Fl_Tree`'s internals. Adds the item based on the value of `prefs.sortorder()`.

Returns

the item added.

Version

1.3.0 release

9.144.3.3 add() [2/4]

```
Fl_Tree_Item * Fl_Tree_Item::add (
    const Fl_Tree_Prefs & prefs,
    char ** arr,
    Fl_Tree_Item * newitem )
```

Descend into path specified by 'arr' and add 'newitem' there.

Should be used only by `Fl_Tree`'s internals. If item is NULL, a new item is created. Adds the item based on the value of `prefs.sortorder()`.

Returns

the item added.

Version

1.3.3 ABI feature

9.144.3.4 add() [3/4]

```
Fl_Tree_Item * Fl_Tree_Item::add (
    const Fl_Tree_Prefs & prefs,
    const char * new_label )
```

Add a new child to this item with the name 'new_label' and defaults from 'prefs'.

An internally managed copy is made of the label string. Adds the item based on the value of prefs.sortorder().

Returns

the item added

Version

1.3.0 release

9.144.3.5 add() [4/4]

```
Fl_Tree_Item * Fl_Tree_Item::add (
    const Fl_Tree_Prefs & prefs,
    const char * new_label,
    Fl_Tree_Item * item )
```

Add 'item' as immediate child with 'new_label' and defaults from 'prefs'.

If 'item' is NULL, a new item is created. An internally managed copy is made of the label string. Adds the item based on the value of prefs.sortorder().

Returns

the item added

Version

1.3.3

9.144.3.6 calc_item_height()

```
int Fl_Tree_Item::calc_item_height (
    const Fl_Tree_Prefs & prefs ) const [protected]
```

Return the item's 'visible' height.

Takes into account the item's:

- visibility (if !is_visible(), returns 0)
- `labelfont()` height: if `label()` != NULL
- `widget()` height: if `widget()` != NULL
- `openicon()` height (if not NULL)
- `usericon()` height (if not NULL) Does NOT include `Fl_Tree::linespacing()`;

Returns

maximum pixel height

9.144.3.7 child()

```
const Fl_Tree_Item * Fl_Tree_Item::child (
    int t ) const
```

Return the const child item for the given 'index'.

Return const child item for the specified 'index'.

9.144.3.8 deactivate()

```
void Fl_Tree_Item::deactivate ( ) [inline]
```

Deactivate the item; the callback() won't be invoked when clicked.

Same as activate(0)

9.144.3.9 deparent()

```
Fl_Tree_Item * Fl_Tree_Item::deparent (
    int pos )
```

Deparent child at index position 'pos'.

This creates an "orphaned" item that is still allocated, but has no parent or siblings. Normally the caller would want to immediately reparent the orphan elsewhere.

A successfully orphaned item will have its [parent\(\)](#) and [prev_sibling\(\)/next_sibling\(\)](#) set to NULL.

Returns

- pointer to orphaned item on success
- NULL on error (could not deparent the item)

9.144.3.10 depth()

```
int Fl_Tree_Item::depth ( ) const
```

Returns how many levels deep this item is in the hierarchy.

For instance; root has a depth of zero, and its immediate children would have a depth of 1, and so on. Use e.g. for determining the horizontal indent of this item during drawing.

9.144.3.11 deselect_all()

```
int Fl_Tree_Item::deselect_all ( ) [inline]
```

Deselect item and all its children.

Returns count of how many items were in the 'selected' state, ie. how many items were "changed".

9.144.3.12 draw()

```
void Fl_Tree_Item::draw (
    int X,
    int & Y,
    int W,
    Fl_Tree_Item * itemfocus,
    int & tree_item_xmax,
    int lastchild = 1,
    int render = 1 )
```

Draw this item and its children.

Parameters

in	<i>X</i>	Horizontal position for item being drawn
in, out	<i>Y</i>	Vertical position for item being drawn, returns new position for next item
in	<i>W</i>	Recommended width for item
in	<i>itemfocus</i>	The tree's current focus item (if any)
in, out	<i>tree_item_xmax</i>	The tree's running xmax (right-most edge so far). Mainly used by parent tree when <code>render==0</code> to calculate tree's max width.
in	<i>lastchild</i>	Is this item the last child in a subtree?
in	<i>render</i>	Whether or not to render the item: 0: no rendering, just calculate size w/out drawing. 1: render item as well as size calc

Version

1.3.3 ABI feature: modified parameters

9.144.3.13 draw_horizontal_connector()

```
void Fl_Tree_Item::draw_horizontal_connector (
    int x1,
    int x2,
    int y,
    const Fl_Tree_Prefs & prefs ) [protected]
```

Internal: Horizontal connector line based on preference settings.

Parameters

in	<i>x1</i>	The left hand X position of the horizontal connector
in	<i>x2</i>	The right hand X position of the horizontal connector
in	<i>y</i>	The vertical position of the horizontal connector
in	<i>prefs</i>	The Fl_Tree prefs

9.144.3.14 draw_item_content()

```
int Fl_Tree_Item::draw_item_content (
    int render ) [virtual]
```

Draw the item content.

This method can be overridden to implement custom drawing by filling the `label_[xywh]()` area with content.

A minimal example of how to override `draw_item_content()` and draw just a normal item's background and label ourselves:

```
class MyTreeItem : public Fl_Tree_Item {
public:
    MyTreeItem() { }
    ~MyTreeItem() { }
    // DRAW OUR CUSTOM CONTENT FOR THE ITEM
    int draw_item_content(int render) {
        // Our item's dimensions + text content
        int X=label_x(), Y=label_y(), W=label_w(), H=label_h();
        const char *text = label() ? label() : "";
        // Rendering? Do any drawing that's needed
        if ( render ) {
            // Draw bg -- a filled rectangle
            fl_color(drawbgcolor()); fl_rectf(X,Y,W,H);
            // Draw label
            fl_font(labelfont(), labelsize()); // use item's label font/size
            fl_color(drawfgcolor()); // use recommended fg color
            fl_draw(text, X,Y,W,H, FL_ALIGN_LEFT); // draw the item's label
        }
        // Rendered or not, we must calculate content's max X position
        int lw=0, lh=0;
        fl_measure(text, lw, lh); // get width of label text
        return X + lw; // return X + label width
    }
};
```

You can draw anything you want inside `draw_item_content()` using any of the `fl_draw.H` functions, as long as it's within the label's `xywh` area.

To add instances of your custom item to the tree, you can use:

```
// Example #1: using add()
MyTreeItem *bart = new MyTreeItem(..); // class derived from Fl_Tree_Item
tree->add("/Simpsons/Bart", bart); // Add item as /Simpsons/Bart

..or you can insert or replace existing items:
// Example #2: using replace()
MyTreeItem *marge = new MyTreeItem(..); // class derived from Fl_Tree_Item
item = tree->add("/Simpsons/Marge"); // create item
item->replace(mi); // replace it with our own
```

Parameters

in	<i>render</i>	Whether we should render content (1), or just tally the geometry (0). Fl_Tree may want only to find the widest item in the tree for scrollbar calculations.
----	---------------	---

Returns

the right-most X coordinate, or 'xmax' of content we drew, i.e. the "scrollable" content. The tree uses the largest xmax to determine the maximum width of the tree's content (needed for e.g. computing the horizontal scrollbar's size).

Version

1.3.3 ABI feature

9.144.3.15 draw_vertical_connector()

```
void Fl_Tree_Item::draw_vertical_connector (
    int x,
    int y1,
    int y2,
    const Fl_Tree_Prefs & prefs ) [protected]
```

Internal: Vertical connector line based on preference settings.

Parameters

in	<i>x</i>	The x position of the vertical connector
in	<i>y1</i>	The top of the vertical connector
in	<i>y2</i>	The bottom of the vertical connector
in	<i>prefs</i>	The Fl_Tree prefs

9.144.3.16 drawbgcolor()

```
Fl_Color Fl_Tree_Item::drawbgcolor ( ) const [protected]
```

Returns the recommended background color used for drawing this item.

See also

[draw_item_content\(\)](#)

Version

1.3.3 ABI

9.144.3.17 drawfgcolor()

```
Fl_Color Fl_Tree_Item::drawfgcolor ( ) const [protected]
```

Returns the recommended foreground color used for drawing this item.

See also

[draw_item_content\(\)](#)

Version

1.3.3 ABI ABI

9.144.3.18 find_child() [1/2]

```
int Fl_Tree_Item::find_child (
    const char * name )
```

Return the index of the immediate child of this item that has the label 'name'.

Returns

index of found item, or -1 if not found.

Version

1.3.0 release

9.144.3.19 find_child() [2/2]

```
int Fl_Tree_Item::find_child (
    Fl_Tree_Item * item )
```

Find the index number for the specified 'item' in the current item's list of children.

Returns

the index, or -1 if not found.

9.144.3.20 find_child_item() [1/2]

```
const Fl_Tree_Item * Fl_Tree_Item::find_child_item (
    char ** arr ) const
```

Find child item by descending array 'arr' of names.

Does not include self in search. Only [Fl_Tree](#) should need this method.

Returns

item, or 0 if not found

Version

1.3.0 release

9.144.3.21 find_child_item() [2/2]

```
const Fl_Tree_Item * Fl_Tree_Item::find_child_item (
    const char * name ) const
```

Return the /immediate/ child of current item that has the label 'name'.

Returns

const found item, or 0 if not found.

Version

1.3.3

9.144.3.22 find_clicked()

```
const Fl_Tree_Item * Fl_Tree_Item::find_clicked (
    const Fl_Tree_Prefs & prefs,
    int yonly = 0 ) const
```

Find the item that the last event was over.

If 'yonly' is 1, only check event's y value, don't care about x.

Parameters

in	<i>prefs</i>	The parent tree's Fl_Tree_Prefs
in	<i>yonly</i>	- 0: check both event's X and Y values. - 1: only check event's Y value, don't care about X.

Returns

pointer to clicked item, or NULL if none found

Version

1.3.3 ABI feature

9.144.3.23 find_item()

```
const Fl_Tree_Item * Fl_Tree_Item::find_item (
    char ** names ) const
```

Find item by descending array of 'names'.

Includes self in search. Only [Fl_Tree](#) should need this method. Use [Fl_Tree::find_item\(\)](#) instead.

Returns

const item, or 0 if not found

9.144.3.24 hide_widgets()

```
void Fl_Tree_Item::hide_widgets ( ) [protected]
```

Internal: Hide the FLTK [widget\(\)](#) for this item and all children.

Used by [close\(\)](#) to hide widgets.

9.144.3.25 insert()

```
Fl_Tree_Item * Fl_Tree_Item::insert (
    const Fl_Tree_Prefs & prefs,
    const char * new_label,
    int pos = 0 )
```

Insert a new item named 'new_label' into current item's children at a specified position 'pos'.

If pos is out of range the new item is

- prepended if pos < 0 or
- appended if pos > item->[children\(\)](#).

Returns

the new item inserted

See also

[Fl_Tree::insert\(\)](#)

9.144.3.26 insert_above()

```
Fl_Tree_Item * Fl_Tree_Item::insert_above (
    const Fl_Tree_Prefs & prefs,
    const char * new_label )
```

Insert a new item named 'new_label' above this item.

Returns

the new item inserted, or 0 if an error occurred.

9.144.3.27 label()

```
void Fl_Tree_Item::label (
    const char * name )
```

Set the label to 'name'.

Makes and manages an internal copy of 'name'.

9.144.3.28 label_h()

```
int Fl_Tree_Item::label_h ( ) const [inline]
```

The item's label height.

Version

1.3.3

9.144.3.29 label_w()

```
int Fl_Tree_Item::label_w ( ) const [inline]
```

The item's maximum label width to right edge of [Fl_Tree](#)'s inner width within scrollbars.

Version

1.3.3

9.144.3.30 label_x()

```
int Fl_Tree_Item::label_x ( ) const [inline]
```

The item's label x position relative to the window.

Version

1.3.3

9.144.3.31 label_y()

```
int Fl_Tree_Item::label_y ( ) const [inline]
```

The item's label y position relative to the window.

Version

1.3.3

9.144.3.32 labelbgcolor() [1/2]

```
Fl_Color Fl_Tree_Item::labelbgcolor ( ) const [inline]
```

Return item's label background text color.

If the color is 0xffffffff, the default behavior is the parent tree's bg color will be used. (An overloaded [draw_item_content\(\)](#) can override this behavior.)

9.144.3.33 labelbgcolor() [2/2]

```
void Fl_Tree_Item::labelbgcolor (
    Fl_Color val ) [inline]
```

Set item's label background color.

A special case is made for color 0xffffffff which uses the parent tree's bg color.

9.144.3.34 move() [1/2]

```
int Fl_Tree_Item::move (
    Fl_Tree_Item * item,
    int op = 0,
    int pos = 0 )
```

Move the current item above/below/into the specified 'item', where 'op' determines the type of move:

- 0: move above 'item' ('pos' ignored)
- 1: move below 'item' ('pos' ignored)
- 2: move into 'item' as a child (at optional position 'pos')

Returns

0 on success. a negative number on error:

- -1: one of the items has no parent
- -2: item's index could not be determined
- -3: bad 'op'
- -4: index range error
- -5: could not deparent
- -6: could not reparent at 'pos'
- (Other return values reserved for future use.)

9.144.3.35 move() [2/2]

```
int Fl_Tree_Item::move (
    int to,
    int from )
```

Move the item 'from' to sibling position of 'to'.

Returns

- 0: Success
- -1: range error (e.g. if 'to' or 'from' out of range).
- (Other return values reserved for future use)

9.144.3.36 move_above()

```
int Fl_Tree_Item::move_above (
    Fl_Tree_Item * item )
```

Move the current item above the specified 'item'.
This is the equivalent of calling `move(item,0,0)`.

Returns

0 on success.
On error returns a negative value; see [move\(Fl_Tree_Item*,int,int\)](#) for possible error codes.

9.144.3.37 move_below()

```
int Fl_Tree_Item::move_below (
    Fl_Tree_Item * item )
```

Move the current item below the specified 'item'.
This is the equivalent of calling `move(item,1,0)`.

Returns

0 on success.
On error returns a negative value; see [move\(Fl_Tree_Item*,int,int\)](#) for possible error codes.

9.144.3.38 move_into()

```
int Fl_Tree_Item::move_into (
    Fl_Tree_Item * item,
    int pos = 0 )
```

Parent the current item as a child of the specified 'item'.
This is the equivalent of calling `move(item,2,pos)`.

Returns

0 on success.
On error returns a negative value; see [move\(Fl_Tree_Item*,int,int\)](#) for possible error codes.

9.144.3.39 next()

```
Fl_Tree_Item * Fl_Tree_Item::next ( )
```

Return the next item in the tree.

This method can be used to walk the tree forward. For an example of how to use this method, see [Fl_Tree::first\(\)](#).

Returns

the next item in the tree, or 0 if there's no more items.

9.144.3.40 next_displayed()

```
Fl_Tree_Item * Fl_Tree_Item::next_displayed (
    Fl_Tree_Prefs & prefs )
```

Same as [next_visible\(\)](#).

Deprecated in 1.3.3 for confusing name, use [next_visible\(\)](#) instead

9.144.3.41 next_sibling()

```
Fl_Tree_Item * Fl_Tree_Item::next_sibling ( )
```

Return this item's next sibling.

Moves to the next item below us at the same level (sibling). Use this to move down the tree without changing [depth\(\)](#). effectively skipping over this item's children/descendents.

Returns

item's next sibling, or 0 if none.

9.144.3.42 next_visible()

```
Fl_Tree_Item * Fl_Tree_Item::next_visible (
    Fl_Tree_Prefs & prefs )
```

Return the next [open\(\)](#), [visible\(\)](#) item.

(If this item has children and is closed, children are skipped)

This method can be used to walk the tree forward, skipping items that are not currently open/visible to the user.

Returns

the next [open\(\)](#) [visible\(\)](#) item below us, or 0 if there's no more items.

Version

1.3.3

9.144.3.43 parent()

```
void Fl_Tree_Item::parent (
    Fl_Tree_Item * val ) [inline]
```

Set the parent for this item.

Should only be used by [Fl_Tree](#)'s internals.

9.144.3.44 prefs()

```
const Fl_Tree_Prefs & Fl_Tree_Item::prefs ( ) const
```

Return the parent tree's prefs.

Returns

a reference to the parent tree's [Fl_Tree_Prefs](#)

Version

1.3.3 ABI feature

9.144.3.45 prev()

```
Fl_Tree_Item * Fl_Tree_Item::prev ( )
```

Return the previous item in the tree.

This method can be used to walk the tree backwards. For an example of how to use this method, see [Fl_Tree::last\(\)](#).

Returns

the previous item in the tree, or 0 if there's no item above this one (hit the root).

9.144.3.46 prev_displayed()

```
Fl_Tree_Item * Fl_Tree_Item::prev_displayed (
    Fl_Tree_Prefs & prefs )
```

Same as [prev_visible\(\)](#).

Deprecated in 1.3.3 for confusing name, use [prev_visible\(\)](#)

9.144.3.47 prev_sibling()

```
Fl_Tree_Item * Fl_Tree_Item::prev_sibling ( )
```

Return this item's previous sibling.

Moves to the previous item above us at the same level (sibling). Use this to move up the tree without changing [depth\(\)](#).

Returns

This item's previous sibling, or 0 if none.

9.144.3.48 prev_visible()

```
Fl_Tree_Item * Fl_Tree_Item::prev_visible (
    Fl_Tree_Prefs & prefs )
```

Return the previous [open\(\)](#), [visible\(\)](#) item.

(If this item above us has children and is closed, its children are skipped)

This method can be used to walk the tree backward, skipping items that are not currently open/visible to the user.

Returns

the previous [open\(\)](#) [visible\(\)](#) item above us, or 0 if there's no more items.

9.144.3.49 recalc_tree()

```
void Fl_Tree_Item::recalc_tree ( ) [protected]
```

Call this when our geometry is changed.

(Font size, label contents, etc) Schedules tree to recalculate itself, as changes to us may affect tree widget's scrollbar visibility and tab sizes.

Version

1.3.3 ABI

9.144.3.50 remove_child() [1/2]

```
int Fl_Tree_Item::remove_child (
    const char * name )
```

Remove immediate child (and its children) by its label 'name'.

If more than one item matches 'name', only the first matching item is removed.

Parameters

in	<i>name</i>	The label name of the immediate child to remove
----	-------------	---

Returns

0 if removed, -1 if not found.

Version

1.3.3

9.144.3.51 remove_child() [2/2]

```
int Fl_Tree_Item::remove_child (
    Fl_Tree_Item * item )
```

Remove 'item' from the current item's children.

Returns

0 if removed, -1 if item not an immediate child.

9.144.3.52 reparent()

```
int Fl_Tree_Item::reparent (
    Fl_Tree_Item * newchild,
    int pos )
```

Reparent specified item as a child of ourself at position 'pos'. Typically 'newchild' was recently orphaned with [deparent\(\)](#).

Returns

- 0: on success
- -1: on error (e.g. if 'pos' out of range) with no changes made.

9.144.3.53 replace()

```
Fl_Tree_Item * Fl_Tree_Item::replace (
    Fl_Tree_Item * newitem )
```

Replace the current item with a new item.

The current item is destroyed if successful. No checks are made to see if an item with the same name exists.

This method can be used to, for example, install 'custom' items into the tree derived from [Fl_Tree_Item](#); see [draw_item_content\(\)](#).

Parameters

in	<i>newitem</i>	The new item to replace the current item
----	----------------	--

Returns

newitem on success, NULL if could not be replaced.

See also

[Fl_Tree_Item::draw_item_content\(\)](#), [Fl_Tree::root\(Fl_Tree_Item*\)](#)

Version

1.3.3 ABI feature

9.144.3.54 replace_child()

```
Fl_Tree_Item * Fl_Tree_Item::replace_child (
    Fl_Tree_Item * olditem,
    Fl_Tree_Item * newitem )
```

Replace existing child 'olditem' with 'newitem'.

The 'olditem' is destroyed if successful. Can be used to put custom items (derived from [Fl_Tree_Item](#)) into the tree. No checks are made to see if an item with the same name exists.

Parameters

in	<i>olditem</i>	The item to be found and replaced
in	<i>newitem</i>	The new item to take the place of 'olditem'

Returns

newitem on success and 'olditem' is destroyed. NULL on error if 'olditem' was not found as an immediate child.

See also

[replace\(\)](#), [Fl_Tree_Item::draw\(\)](#)

Version

1.3.3 ABI feature

9.144.3.55 select()

```
void Fl_Tree_Item::select (
    int val = 1 ) [inline]
```

Change the item's selection state to the optionally specified 'val'.

If 'val' is not specified, the item will be selected.

9.144.3.56 select_all()

```
int Fl_Tree_Item::select_all ( ) [inline]
```

Select item and all its children.

Returns count of how many items were in the 'deselected' state, ie. how many items were "changed".

9.144.3.57 show_self()

```
void Fl_Tree_Item::show_self (
    const char * indent = "" ) const
```

Print the tree as 'ascii art' to stdout.

Used mainly for debugging.

9.144.3.58 show_widgets()

```
void Fl_Tree_Item::show_widgets ( ) [protected]
```

Internal: Show the FLTK [widget\(\)](#) for this item and all children.

Used by [open\(\)](#) to re-show widgets that were hidden by a previous [close\(\)](#)

9.144.3.59 swap_children() [1/2]

```
int Fl_Tree_Item::swap_children (
    Fl_Tree_Item * a,
    Fl_Tree_Item * b )
```

Swap two of our immediate children, given item pointers.

Use e.g. for sorting.

This method is SLOW because it involves linear lookups.

For speed, use [swap_children\(int,int\)](#) instead.

Parameters

in	<i>a,b</i>	The item ptrs of the two items to swap. Both must be immediate children of the current item.
----	------------	--

Returns

- 0 : OK
- -1 : failed: item 'a' or 'b' is not our child.

9.144.3.60 swap_children() [2/2]

```
void Fl_Tree_Item::swap_children (
    int ax,
    int bx )
```

Swap two of our children, given two child index values 'ax' and 'bx'.

Use e.g. for sorting.

This method is FAST, and does not involve lookups.

No range checking is done on either index value.

Parameters

in	<i>ax,bx</i>	the index of the items to swap
----	--------------	--------------------------------

9.144.3.61 tree() [1/2]

```
Fl_Tree * Fl_Tree_Item::tree ( ) [inline]
```

Return the tree for this item.

Version

1.3.4 (ABI feature)

9.144.3.62 tree() [2/2]

```
const Fl_Tree * Fl_Tree_Item::tree ( ) const [inline]
```

Return the tree for this item.

Version

1.3.3 (ABI feature)

9.144.3.63 update_prev_next()

```
void Fl_Tree_Item::update_prev_next (
    int index )
```

Update our `_prev_sibling` and `_next_sibling` pointers to point to neighbors given `index` as being our current position in the parent's item array.

Call this whenever items in the array are added/removed/moved/swapped/etc.

Parameters

in	<i>index</i>	Our index# in the parent. Special case if index=-1: become an orphan; null out all parent/sibling associations.
----	--------------	--

9.144.3.64 userdeicon() [1/2]

```
Fl_Image * Fl_Tree_Item::userdeicon ( ) const [inline]
```

Return the deactivated version of the user icon, if any.

Returns 0 if none.

9.144.3.65 userdeicon() [2/2]

```
void Fl_Tree_Item::userdeicon (
    Fl_Image * val ) [inline]
```

Set the usericon to draw when the item is deactivated.

Use '0' to disable. No internal copy is made; caller must manage icon's memory.

To create a typical 'grayed out' version of your usericon image, you can do the following:

```
// Create tree + usericon for items
Fl_Tree *tree = new Fl_Tree(..);
Fl_Image *usr_icon = new Fl_Pixmap(..); // your usericon
Fl_Image *de_icon = usr_icon->copy(); // make a copy, and..
de_icon->inactive(); // make it 'grayed out'
...
for ( .. ) { // item loop..
    item = tree->add("..."); // create new item
    item->usericon(usr_icon); // assign usericon to items
    item->userdeicon(de_icon); // assign userdeicon to items
    ..
}
```

In the above example, the app should 'delete' the two icons when they're no longer needed (e.g. after the tree is destroyed)

Version

1.3.4

9.144.3.66 usericon()

```
void Fl_Tree_Item::usericon (
    Fl_Image * val ) [inline]
```

Set the item's user icon to an [Fl_Image](#).

Use '0' to disable. No internal copy is made, caller must manage icon's memory.

Note, if you expect your items to be deactivated(), use [userdeicon\(Fl_Image*\)](#) to set up a 'grayed out' version of your icon to be used for display.

See also

[userdeicon\(Fl_Image*\)](#)

9.144.3.67 visible_r()

```
int Fl_Tree_Item::visible_r ( ) const
```

See if item and all its parents are [open\(\)](#) and [visible\(\)](#).

Returns

1 – item and its parents are [open\(\)](#) and [visible\(\)](#) 0 – item (or one of its parents) are invisible or [close\(\)](#)ed.

The documentation for this class was generated from the following files:

- [Fl_Tree_Item.H](#)
- [Fl_Tree_Item.cxx](#)

9.145 FI_Tree_Item_Array Class Reference

Manages an array of [FI_Tree_Item](#) pointers.

```
#include <FI_Tree_Item_Array.H>
```

Public Member Functions

- void [add](#) ([FI_Tree_Item](#) *val)
Add an item to the end of the array.*
- void [clear](#) ()
Clear the entire array.
- int [deparent](#) (int pos)
Deparent item at 'pos' from our list of children.
- [FI_Tree_Item_Array](#) (const [FI_Tree_Item_Array](#) *o)
Copy constructor. Makes new copy of array, with new instances of each item.
- [FI_Tree_Item_Array](#) (int new_chunksize=10)
Constructor; creates an empty array.
- void [insert](#) (int pos, [FI_Tree_Item](#) *new_item)
Insert an item at index position pos.
- int [manage_item_destroy](#) () const
- void [manage_item_destroy](#) (int val)
Option to control if FI_Tree_Item_Array's destructor will also destroy the FI_Tree_Item's.
- int [move](#) (int to, int from)
Move item at 'from' to new position 'to' in the array.
- [FI_Tree_Item](#) * [operator\[\]](#) (int i)
Return the item and index i.
- const [FI_Tree_Item](#) * [operator\[\]](#) (int i) const
Const version of operator[](int i)
- int [remove](#) ([FI_Tree_Item](#) *item)
Remove the item from the array.
- void [remove](#) (int index)
Remove the item at.
- int [reparent](#) ([FI_Tree_Item](#) *item, [FI_Tree_Item](#) *newparent, int pos)
Reparent specified item as a child of ourself.
- void [replace](#) (int pos, [FI_Tree_Item](#) *new_item)
Replace the item at index with newitem.
- void [swap](#) (int ax, int bx)
Swap the two items at index positions ax and bx.
- int [total](#) () const
Return the total items in the array, or 0 if empty.
- ~[FI_Tree_Item_Array](#) ()
Destructor. Calls each item's destructor, destroys internal _items array.

9.145.1 Detailed Description

Manages an array of [FI_Tree_Item](#) pointers.

Because FLTK 1.x.x. has mandated that templates and STL not be used, we use this class to dynamically manage the arrays.

None of the methods do range checking on index values; the caller must be sure that index values are within the range $0 < \text{index} < \text{total}()$ (unless otherwise noted).

9.145.2 Constructor & Destructor Documentation

9.145.2.1 Fl_Tree_Item_Array()

```
Fl_Tree_Item_Array::Fl_Tree_Item_Array (
    int new_chunksize = 10 )
```

Constructor; creates an empty array.

The optional 'chunksize' can be specified to optimize memory allocation for potentially large arrays. Default chunksize is 10.

9.145.3 Member Function Documentation

9.145.3.1 add()

```
void Fl_Tree_Item_Array::add (
    Fl_Tree_Item * val )
```

Add an item* to the end of the array.

Assumes the item was created with 'new', and will remain allocated.. Fl_Tree_Item_Array will handle calling the item's destructor when the array is cleared or the item remove()'ed.

9.145.3.2 clear()

```
void Fl_Tree_Item_Array::clear ( )
```

Clear the entire array.

Each item will be deleted (destructors will be called), and the array will be cleared. total() will return 0.

9.145.3.3 deparent()

```
int Fl_Tree_Item_Array::deparent (
    int pos )
```

Deparent item at 'pos' from our list of children.

Similar to a [remove\(\)](#) without the destruction of the item. This creates an orphaned item (still allocated, has no parent) which soon after is typically reparented elsewhere.

\returns 0 on success, -1 on error (e.g. if \p 'pos' out of range)

9.145.3.4 insert()

```
void Fl_Tree_Item_Array::insert (
    int pos,
    Fl_Tree_Item * new_item )
```

Insert an item at index position pos.

Handles enlarging array if needed, total increased by 1.
If \p pos \>= total(), the item is appended to the array.
If \p pos \< 0, the item is prepended (works like pos == 0).

9.145.3.5 manage_item_destroy()

```
void Fl_Tree_Item_Array::manage_item_destroy (
    int val ) [inline]
```

Option to control if [Fl_Tree_Item_Array](#)'s destructor will also destroy the [Fl_Tree_Item](#)'s.

If set: items and item array is destroyed. If clear: only the item array is destroyed, not items themselves.

9.145.3.6 move()

```
int Fl_Tree_Item_Array::move (
    int to,
    int from )
```

Move item at 'from' to new position 'to' in the array.

Due to how the moving an item shuffles the array around, a positional 'move' implies things that may not be obvious:

- When 'from' moved lower in tree, appears BELOW item that was at 'to'.
- When 'from' moved higher in tree, appears ABOVE item that was at 'to'.

Returns

0 on success, -1 on range error (e.g. if 'to' or 'from' out of range)

9.145.3.7 remove() [1/2]

```
int Fl_Tree_Item_Array::remove (
    Fl_Tree_Item * item )
```

Remove the item from the array.

\returns 0 if removed, or -1 if the item was not in the array.

9.145.3.8 remove() [2/2]

```
void Fl_Tree_Item_Array::remove (
    int index )
```

Remove the item at.

Parameters

in	<i>index</i>	from the array. The item will be delete'd (if non-NULL), so its destructor will be called.
----	--------------	---

9.145.3.9 reparent()

```
int Fl_Tree_Item_Array::reparent (
    Fl_Tree_Item * item,
    Fl_Tree_Item * newparent,
    int pos )
```

Reparent specified item as a child of ourself.

Typically 'newchild' was recently orphaned with [deparent\(\)](#).

\returns 0 on success, -1 on error (e.g. if \p 'pos' out of range)

9.145.3.10 replace()

```
void Fl_Tree_Item_Array::replace (
    int index,
    Fl_Tree_Item * newitem )
```

Replace the item at *index* with *newitem*.

Old item at *index* position will be destroyed, and the new item will take it's place, and stitched into the linked list.

The documentation for this class was generated from the following files:

- [Fl_Tree_Item_Array.H](#)
- [Fl_Tree_Item_Array.cxx](#)

9.146 FI_Tree_Prefs Class Reference

Tree widget's preferences.

```
#include <FI_Tree_Prefs.H>
```

Public Member Functions

- [FI_Image](#) * [closedeicon](#) () const
Return the deactivated version of the close icon, if any.
- [FI_Image](#) * [closeicon](#) () const
Gets the default 'close' icon Returns the FI_Image of the icon, or 0 if none.*
- void [closeicon](#) ([FI_Image](#) *val)
Sets the icon to be used as the 'close' icon.
- [FI_Color](#) [connectorcolor](#) () const
Get the connector color used for tree connection lines.
- void [connectorcolor](#) ([FI_Color](#) val)
Set the connector color used for tree connection lines.
- [FI_Tree_Connector](#) [connectorstyle](#) () const
Get the connector style.
- void [connectorstyle](#) ([FI_Tree_Connector](#) val)
Set the connector style.
- void [connectorstyle](#) (int val)
Set the connector style [integer].
- int [connectorwidth](#) () const
Get the tree connection line's width.
- void [connectorwidth](#) (int val)
Set the tree connection line's width.
- void [do_item_draw_callback](#) ([FI_Tree_Item](#) *o) const
- [FI_Tree_Prefs](#) ()
FI_Tree_Prefs constructor.
- [FI_Tree_Item_Draw_Callback](#) * [item_draw_callback](#) () const
- void [item_draw_callback](#) ([FI_Tree_Item_Draw_Callback](#) *cb, void *data=0)
- [FI_Tree_Item_Draw_Mode](#) [item_draw_mode](#) () const
Get the 'item draw mode' used for the tree.
- void [item_draw_mode](#) ([FI_Tree_Item_Draw_Mode](#) val)
Set the 'item draw mode' used for the tree to val.
- void * [item_draw_user_data](#) () const
- [FI_Color](#) [item_labelbgcolor](#) () const
Get the default label background color.
- void [item_labelbgcolor](#) ([FI_Color](#) val)
Set the default label background color.
- [FI_Color](#) [item_labelfgcolor](#) () const
Get the default label foreground color.
- void [item_labelfgcolor](#) ([FI_Color](#) val)
Set the default label foreground color.
- [FI_Font](#) [item_labelfont](#) () const
Return the label's font.
- void [item_labelfont](#) ([FI_Font](#) val)
Set the label's font to val.
- [FI_Fontsize](#) [item_labelsize](#) () const
Return the label's size in pixels.
- void [item_labelsize](#) ([FI_Fontsize](#) val)

- Set the label's size in pixels to `val`.*
- **FI_Tree_Item_Reselect_Mode** `item_reselect_mode` () const
Returns the current item re/selection mode.
 - void **item_reselect_mode** (FI_Tree_Item_Reselect_Mode mode)
Sets the item re/selection mode.
 - **FI_Color** `labelbgcolor` () const
Obsolete: Get the default label background color. Please use `item_labelbgcolor()` instead.
 - void **labelbgcolor** (FI_Color val)
Obsolete: Set the default label background color. Please use `item_labelbgcolor(FI_Color)` instead.
 - **FI_Color** `labelfgcolor` () const
Obsolete: Get the default label foreground color. Please use `item_labelfgcolor()` instead.
 - void **labelfgcolor** (FI_Color val)
Obsolete: Set the default label foreground color. Please use `item_labelfgcolor(FI_Color)` instead.
 - **FI_Font** `labelfont` () const
Obsolete: Return the label's font. Please use `item_labelfont()` instead.
 - void **labelfont** (FI_Font val)
Obsolete: Set the label's font to `val`. Please use `item_labelfont(FI_Font)` instead.
 - int **labelmarginleft** () const
Get the label's left margin value in pixels.
 - void **labelmarginleft** (int val)
Set the label's left margin value in pixels.
 - **FI_Fontsize** `labelsize` () const
Obsolete: Return the label's size in pixels. Please use `item_labelsize()` instead.
 - void **labelsize** (FI_Fontsize val)
Obsolete: Set the label's size in pixels to `val`. Please use `item_labelsize(FI_Fontsize)` instead.
 - int **linespacing** () const
Get the line spacing value in pixels.
 - void **linespacing** (int val)
Set the line spacing value in pixels.
 - int **marginbottom** () const
Get the bottom margin's value in pixels.
 - void **marginbottom** (int val)
Set the bottom margin's value in pixels This is the extra distance the vertical scroller lets you travel.
 - int **marginleft** () const
Get the left margin's value in pixels.
 - void **marginleft** (int val)
Set the left margin's value in pixels.
 - int **margintop** () const
Get the top margin's value in pixels.
 - void **margintop** (int val)
Set the top margin's value in pixels.
 - int **openchild_marginbottom** () const
Get the margin below an open child in pixels.
 - void **openchild_marginbottom** (int val)
Set the margin below an open child in pixels.
 - **FI_Image** * `opendeicon` () const
Return the deactivated version of the open icon, if any.
 - **FI_Image** * `openicon` () const
Get the current default 'open' icon.
 - void **openicon** (FI_Image *val)
Sets the default icon to be used as the 'open' icon when items are add()ed to the tree.

- [FI_Boxtype](#) **selectbox** () const
Get the default selection box's box drawing style as an FI_Boxtype.
- void **selectbox** ([FI_Boxtype](#) val)
Set the default selection box's box drawing style to val.
- [FI_Tree_Select](#) **selectmode** () const
Get the selection mode used for the tree.
- void **selectmode** ([FI_Tree_Select](#) val)
Set the selection mode used for the tree to val.
- char **showcollapse** () const
Returns 1 if the collapse icon is enabled, 0 if not.
- void **showcollapse** (int val)
Set if we should show the collapse icon or not.
- int **showroot** () const
Returns 1 if the root item is to be shown, or 0 if not.
- void **showroot** (int val)
Set if the root item should be shown or not.
- [FI_Tree_Sort](#) **sortorder** () const
Get the default sort order value.
- void **sortorder** ([FI_Tree_Sort](#) val)
Set the default sort order value.
- [FI_Image](#) * **userdeicon** () const
Return the deactivated version of the user icon, if any.
- [FI_Image](#) * **usericon** () const
Gets the default 'user icon' (default is 0)
- void **usericon** ([FI_Image](#) *val)
Sets the default 'user icon' Returns the FI_Image of the icon, or 0 if none (default).*
- int **usericonmarginleft** () const
Get the user icon's left margin value in pixels.
- void **usericonmarginleft** (int val)
Set the user icon's left margin value in pixels.
- int **widgetmarginleft** () const
Get the widget()'s left margin value in pixels.
- void **widgetmarginleft** (int val)
Set the widget's left margin value in pixels.
- **~FI_Tree_Prefs** ()
FI_Tree_Prefs destructor.

9.146.1 Detailed Description

Tree widget's preferences.

[FI_Tree](#)'s Preferences class.

This class manages the [FI_Tree](#)'s defaults. You should probably be using the methods in [FI_Tree](#) instead of trying to accessing tree's preferences settings directly.

9.146.2 Member Function Documentation

9.146.2.1 closedeicon()

```
FI\_Image * FI_Tree_Prefs::closedeicon ( ) const [inline]
```

Return the deactivated version of the close icon, if any.

Returns 0 if none.

9.146.2.2 closeicon()

```
void Fl_Tree_Prefs::closeicon (
    Fl_Image * val )
```

Sets the icon to be used as the 'close' icon.
This overrides the built in default '[-]' icon.

Parameters

in	val	– The new image, or zero to use the default '[-]' icon.
----	-----	---

9.146.2.3 item_draw_mode()

```
void Fl_Tree_Prefs::item_draw_mode (
    Fl_Tree_Item_Draw_Mode val ) [inline]
```

Set the 'item draw mode' used for the tree to val.
This affects how items in the tree are drawn, such as when a widget() is defined. See Fl_Tree_Item_Draw_Mode for possible values.

9.146.2.4 item_labelbgcolor() [1/2]

```
Fl_Color Fl_Tree_Prefs::item_labelbgcolor ( ) const [inline]
```

Get the default label background color.
This returns the Fl_Tree::color() unless item_labelbgcolor() has been set explicitly.

9.146.2.5 item_labelbgcolor() [2/2]

```
void Fl_Tree_Prefs::item_labelbgcolor (
    Fl_Color val ) [inline]
```

Set the default label background color.
Once set, overrides the default behavior of using Fl_Tree::color().

9.146.2.6 marginbottom()

```
int Fl_Tree_Prefs::marginbottom ( ) const [inline]
```

Get the bottom margin's value in pixels.
This is the extra distance the vertical scroller lets you travel.

9.146.2.7 opendeicon()

```
Fl_Image * Fl_Tree_Prefs::opendeicon ( ) const [inline]
```

Return the deactivated version of the open icon, if any.
Returns 0 if none.

9.146.2.8 openicon() [1/2]

```
Fl_Image * Fl_Tree_Prefs::openicon ( ) const [inline]
```

Get the current default 'open' icon.
Returns the Fl_Image* of the icon, or 0 if none.

9.146.2.9 openicon() [2/2]

```
void Fl_Tree_Prefs::openicon (
    Fl_Image * val )
```

Sets the default icon to be used as the 'open' icon when items are add()ed to the tree.
This overrides the built in default '[+]' icon.

Parameters

in	val	– The new image, or zero to use the default [+] icon.
----	-----	---

9.146.2.10 selectmode()

```
void Fl_Tree_Prefs::selectmode (
    Fl_Tree_Select val ) [inline]
```

Set the selection mode used for the tree to `val`.

This affects how items in the tree are selected when clicked on and dragged over by the mouse. See `Fl_Tree_Select` for possible values.

9.146.2.11 showcollapse()

```
void Fl_Tree_Prefs::showcollapse (
    int val ) [inline]
```

Set if we should show the collapse icon or not.

If collapse icons are disabled, the user will not be able to interactively collapse items in the tree, unless the application provides some other means via `open()` and `close()`.

Parameters

in	val	1: shows collapse icons (default), 0: hides collapse icons.
----	-----	--

9.146.2.12 showroot()

```
void Fl_Tree_Prefs::showroot (
    int val ) [inline]
```

Set if the root item should be shown or not.

Parameters

in	val	1 – show the root item (default) 0 – hide the root item.
----	-----	---

9.146.2.13 sortorder()

```
void Fl_Tree_Prefs::sortorder (
    Fl_Tree_Sort val ) [inline]
```

Set the default sort order value.

Defines the order new items appear when `add()`ed to the tree. See `Fl_Tree_Sort` for possible values.

9.146.2.14 userdeicon()

```
Fl_Image * Fl_Tree_Prefs::userdeicon ( ) const [inline]
```

Return the deactivated version of the user icon, if any.

Returns 0 if none.

The documentation for this class was generated from the following files:

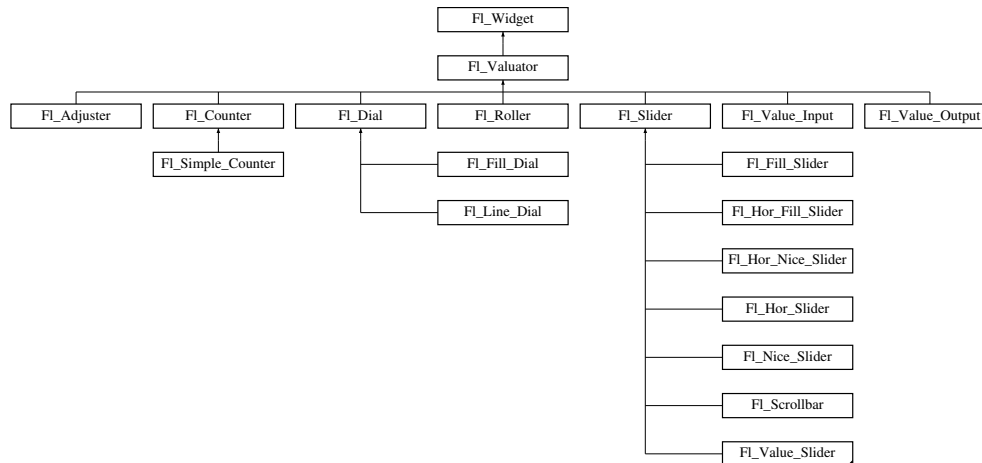

- [Fl_Tree_Prefs.H](#)
- [Fl_Tree_Prefs.cxx](#)

9.147 FI_Valuator Class Reference

The `FI_Valuator` class controls a single floating-point value and provides a consistent interface to set the value, range, and step, and insures that callbacks are done the same for every object.

```
#include <FI_Valuator.H>
```

Inheritance diagram for `FI_Valuator`:

Public Member Functions

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double `FI_Valuator::step()` const
- void **step** (double s)
See double `FI_Valuator::step()` const.

- void **step** (int a)
See double [FI_Valuator::step\(\)](#) const
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * **as_group** ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * **as_window** ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype](#) **box** () const
Gets the box type of the widget.
- void **box** ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) **callback** () const
Gets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback](#) *cb, void *p)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void **callback** ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()

- Marks the value of the widget as unchanged.*

 - void `clear_damage` (`uchar c=0`)
 - Clears or sets the damage flags.*
 - void `clear_output` ()
 - Sets a widget to accept input.*
 - void `clear_visible` ()
 - Hides the widget.*
 - void `clear_visible_focus` ()
 - Disables keyboard focus navigation with this widget.*
 - `FI_Color color` () const
 - Gets the background color of the widget.*
 - void `color` (`FI_Color bg`)
 - Sets the background color of the widget.*
 - void `color` (`FI_Color bg`, `FI_Color sel`)
 - Sets the background and selection color of the widget.*
 - `FI_Color color2` () const
 - For back compatibility only.*
 - void `color2` (`unsigned a`)
 - For back compatibility only.*
 - int `contains` (`const FI_Widget *w`) const
 - Checks if w is a child of this widget.*
 - void `copy_label` (`const char *new_label`)
 - Sets the current label.*
 - void `copy_tooltip` (`const char *text`)
 - Sets the current tooltip text.*
 - `uchar damage` () const
 - Returns non-zero if `draw()` needs to be called.*
 - void `damage` (`uchar c`)
 - Sets the damage bits for the widget.*
 - void `damage` (`uchar c`, `int x`, `int y`, `int w`, `int h`)
 - Sets the damage bits for an area inside the widget.*
 - int `damage_resize` (`int`, `int`, `int`, `int`)
 - Internal use only.*
 - void `deactivate` ()
 - Deactivates the widget.*
 - `FI_Image * deimage` ()
 - Gets the image that is used as part of the widget label.*
 - const `FI_Image * deimage` () const
 - void `deimage` (`FI_Image &img`)
 - Sets the image to use as part of the widget label.*
 - void `deimage` (`FI_Image *img`)
 - Sets the image to use as part of the widget label.*
 - void `do_callback` ()
 - Calls the widget callback.*
 - void `do_callback` (`FI_Widget *o`, `long arg`)
 - Calls the widget callback.*
 - void `do_callback` (`FI_Widget *o`, `void *arg=0`)
 - Calls the widget callback.*
 - virtual void `draw` ()=0
 - Draws the widget.*
 - void `draw_label` (`int`, `int`, `int`, `int`, `FI_Align`) const

- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int `h` () const
Gets the widget height.
 - virtual int `handle` (int event)
Handles the specified event.
 - virtual void `hide` ()
Makes a widget invisible.
 - `FI_Image * image` ()
Gets the image that is used as part of the widget label.
 - const `FI_Image * image` () const
 - void `image` (`FI_Image &img`)
Sets the image to use as part of the widget label.
 - void `image` (`FI_Image *img`)
Sets the image to use as part of the widget label.
 - int `inside` (const `FI_Widget *wgt`) const
Checks if this widget is a child of wgt.
 - int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
 - const char * `label` () const
Gets the current label text.
 - void `label` (const char *text)
Sets the current label pointer.
 - void `label` (`FI_Labeltype a`, const char *b)
Shortcut to set the label text and type in one call.
 - `FI_Color labelcolor` () const
Gets the label color.
 - void `labelcolor` (`FI_Color c`)
Sets the label color.
 - `FI_Font labelfont` () const
Gets the font to use.
 - void `labelfont` (`FI_Font f`)
Sets the font to use.
 - `FI_Fontsize labelsize` () const
Gets the font size in pixels.
 - void `labelsize` (`FI_Fontsize pix`)
Sets the font size in pixels.
 - `FI_Labeltype labeltype` () const
Gets the label type.
 - void `labeltype` (`FI_Labeltype a`)
Sets the label type.
 - void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
 - unsigned int `output` () const
Returns if a widget is used for output only.
 - `FI_Group * parent` () const
Returns a pointer to the parent widget.
 - void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
 - void `position` (int X, int Y)
Repositions the window or widget.
 - void `redraw` ()

- Schedules the drawing of the widget.*

 - void `redraw_label` ()
- Schedules the drawing of the label.*

 - virtual void `resize` (int *x*, int *y*, int *w*, int *h*)
- Changes the size or position of the widget.*

 - `FI_Color selection_color` () const
- Gets the selection color.*

 - void `selection_color` (`FI_Color` *a*)
- Sets the selection color.*

 - void `set_active` ()
- Marks the widget as active without sending events or changing focus.*

 - void `set_changed` ()
- Marks the value of the widget as changed.*

 - void `set_output` ()
- Sets a widget to output only.*

 - void `set_visible` ()
- Makes the widget visible.*

 - void `set_visible_focus` ()
- Enables keyboard focus navigation with this widget.*

 - virtual void `show` ()
- Makes a widget visible.*

 - void `size` (int *W*, int *H*)
- Changes the size of the widget.*

 - int `take_focus` ()
- Gives the widget the keyboard focus.*

 - unsigned int `takesevents` () const
- Returns if the widget is able to take events.*

 - int `test_shortcut` ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * `tooltip` () const
- Gets the current tooltip text.*

 - void `tooltip` (const char **text*)
- Sets the current tooltip text.*

 - `FI_Window * top_window` () const
- Returns a pointer to the top-level window for the widget.*

 - `FI_Window * top_window_offset` (int &*xoff*, int &*yoff*) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - `uchar type` () const
- Gets the widget type.*

 - void `type` (`uchar` *t*)
- Sets the widget type.*

 - int `use_accents_menu` ()
- Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.*

 - void * `user_data` () const
- Gets the user data for this widget.*

 - void `user_data` (void **v*)
- Sets the user data for this widget.*

 - unsigned int `visible` () const
- Returns whether a widget is visible.*

 - unsigned int `visible_focus` ()
- Checks whether this widget has a visible focus.*

- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Protected Member Functions

- `FI_Valuator` (int X, int Y, int W, int H, const char *L)
Creates a new `FI_Valuator` widget using the given position, size, and label string.
- void `handle_drag` (double newvalue)
Called during a drag operation, after an `FL_WHEN_CHANGED` event is received and before the callback.
- void `handle_push` ()
Stores the current value in the previous value.
- void `handle_release` ()
Called after an `FL_WHEN_RELEASE` event is received and before the callback.
- int `horizontal` () const
Tells if the valuator is an `FL_HORIZONTAL` one.
- double `previous_value` () const
Gets the previous floating point value before an event changed it.
- void `set_value` (double v)
Sets the current floating point value.
- double `softclamp` (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void `value_damage` ()
Asks for partial redraw.

Protected Member Functions inherited from `FI_Widget`

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (`FI_Boxtype` t, `FI_Color` c) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` c) const
Draws a box of type t, of color c at the position X,Y and size W,H.

- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FI_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
, **OVERRIDE** = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
, **MENU_WINDOW** = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15
, **GROUP_RELATIVE** = 1<<16 , **COPIED_TOOLTIP** = 1<<17 , **FULLSCREEN** = 1<<18 , **MAC_USE_ACCENTS_MENU**
= 1<<19 ,
USERFLAG3 = 1<<29 , **USERFLAG2** = 1<<30 , **USERFLAG1** = 1<<31 }
flags possible values enumeration.

9.147.1 Detailed Description

The [FI_Valuator](#) class controls a single floating-point value and provides a consistent interface to set the value, range, and step, and insures that callbacks are done the same for every object.

There are probably more of these classes in FLTK than any others:

P

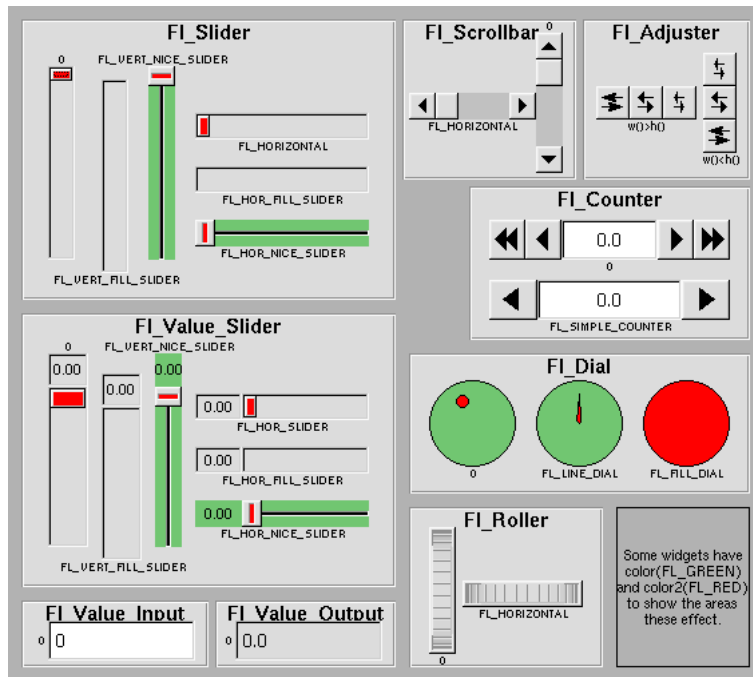

Figure 9.48 Valuators derived from FI_Valuators

In the above diagram each box surrounds an actual subclass. These are further differentiated by setting the `type()` of the widget to the symbolic value labeling the widget. The ones labeled "0" are the default versions with a `type(0)`. For consistency the symbol `FL_VERTICAL` is defined as zero.

9.147.2 Constructor & Destructor Documentation

9.147.2.1 FI_Valuator()

```
Fl_Valuator::Fl_Valuator (
    int X,
    int Y,
    int W,
    int H,
    const char * L ) [protected]
```

Creates a new [FI_Valuator](#) widget using the given position, size, and label string. The default boxtype is `FL_NO_BOX`.

9.147.3 Member Function Documentation

9.147.3.1 format()

```
int Fl_Valuator::format (
    char * buffer ) [virtual]
```

Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter. The actual format used depends on the current step value. If the step value has been set to zero then a `%g` format is used. If the step value is non-zero, then a `%.*f` format is used, where the precision is calculated to show sufficient digits for the current step value. An integer step value, such as 1 or 1.0, gives a precision of 0, so the formatted value will appear as an integer.

This method is used by the `Fl_Valuator_...` group of widgets to format the current value into a text string. The return value is the length of the formatted text. The formatted value is written into `buffer`. `buffer` should have space for at least 128 bytes.

You may override this function to create your own text formatting.

9.147.3.2 `increment()`

```
double Fl_Valuator::increment (
    double v,
    int n )
```

Adds `n` times the step value to the passed value.

If `step` was set to zero it uses `fabs(maximum() - minimum()) / 100`.

9.147.3.3 `maximum()` [1/2]

```
double Fl_Valuator::maximum ( ) const [inline]
```

Gets the maximum value for the valuator.

9.147.3.4 `maximum()` [2/2]

```
void Fl_Valuator::maximum (
    double a ) [inline]
```

Sets the maximum value for the valuator.

9.147.3.5 `minimum()` [1/2]

```
double Fl_Valuator::minimum ( ) const [inline]
```

Gets the minimum value for the valuator.

9.147.3.6 `minimum()` [2/2]

```
void Fl_Valuator::minimum (
    double a ) [inline]
```

Sets the minimum value for the valuator.

9.147.3.7 `precision()`

```
void Fl_Valuator::precision (
    int digits )
```

Sets the step value to $1.0 / 10^{\text{digits}}$.

Precision `digits` is limited to 0...9 to avoid internal overflow errors. Values outside this range are clamped.

Note

For negative values of `digits` the step value is set to $A = 1.0$ and $B = 1$, i.e. $1.0/1 = 1$.

9.147.3.8 `range()`

```
void Fl_Valuator::range (
    double a,
    double b ) [inline]
```

Sets the minimum and maximum values for the valuator.

When the user manipulates the widget, the value is limited to this range. This clamping is done *after* rounding to the step value (this makes a difference if the range is not a multiple of the step).

The minimum may be greater than the maximum. This has the effect of "reversing" the object so the larger values are in the opposite direction. This also switches which end of the filled sliders is filled.

Some widgets consider this a "soft" range. This means they will stop at the range, but if the user releases and grabs the control again and tries to move it further, it is allowed.

The range may affect the display. You must [redraw\(\)](#) the widget after changing the range.

9.147.3.9 round()

```
double Fl_Valuator::round (
    double v )
```

Round the passed value to the nearest step increment.

Does nothing if step is zero.

9.147.3.10 step()

```
double Fl_Valuator::step ( ) const [inline]
```

Gets or sets the step value.

As the user moves the mouse the value is rounded to the nearest multiple of the step value. This is done *before* clamping it to the range. For most widgets the default step is zero.

For precision the step is stored as the ratio of a double A and an integer $B = A/B$. You can set these values directly. Currently setting a floating point value sets the nearest $A/1$ or $1/B$ value possible.

9.147.3.11 value() [1/2]

```
double Fl_Valuator::value ( ) const [inline]
```

Gets the floating point(double) value.

See int [value\(double\)](#)

9.147.3.12 value() [2/2]

```
int Fl_Valuator::value (
    double v )
```

Sets the current value.

The new value is *not* clamped or otherwise changed before storing it. Use [clamp\(\)](#) or [round\(\)](#) to modify the value before calling [value\(\)](#). The widget is redrawn if the new value is different than the current one. The initial value is zero.

[changed\(\)](#) will return true if the user has moved the slider, but it will be turned off by [value\(x\)](#) and just before doing a callback (the callback can turn it back on if desired).

9.147.3.13 value_damage()

```
void Fl_Valuator::value_damage ( ) [protected], [virtual]
```

Asks for partial redraw.

Reimplemented in [Fl_Adjuster](#).

The documentation for this class was generated from the following files:

- [Fl_Valuator.H](#)
- [Fl_Valuator.cxx](#)

9.148 Fl_Value_Input Class Reference

The [Fl_Value_Input](#) widget displays a numeric value.

```
#include <Fl_Value_Input.H>
```

Inheritance diagram for [Fl_Value_Input](#):

Public Member Functions

- [FI_Color](#) `cursor_color` () const
Gets the color of the text cursor.
- void `cursor_color` ([FI_Color](#) n)
Sets the color of the text cursor.
- [FI_Value_Input](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Value_Input](#) widget using the given position, size, and label string.
- int `handle` (int)
Handles the specified event.
- void `resize` (int, int, int, int)
Changes the size or position of the widget.
- int `shortcut` () const
Returns the current shortcut key for the Input.
- void `shortcut` (int s)
Sets the shortcut key to s.
- char `soft` () const
If "soft" is turned on, the user is allowed to drag the value outside the range.
- void `soft` (char s)
See void [FI_Value_Input::soft\(char s\)](#)
- [FI_Color](#) `textcolor` () const
Gets the color of the text in the value box.
- void `textcolor` ([FI_Color](#) n)
Sets the color of the text in the value box.
- [FI_Font](#) `textfont` () const
Gets the typeface of the text in the value box.
- void `textfont` ([FI_Font](#) s)
Sets the typeface of the text in the value box.
- [FI_Fontsize](#) `textsize` () const
Gets the size of the text in the value box.
- void `textsize` ([FI_Fontsize](#) s)
Sets the size of the text in the value box.

Public Member Functions inherited from [FI_Valuator](#)

- void `bounds` (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double `clamp` (double)
Clamps the passed value to the valuator range.
- virtual int `format` (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double `increment` (double, int)
Adds n times the step value to the passed value.
- double `maximum` () const

- Gets the maximum value for the valuator.*

 - void **maximum** (double a)
- Sets the maximum value for the valuator.*

 - double **minimum** () const
- Gets the minimum value for the valuator.*

 - void **minimum** (double a)
- Sets the minimum value for the valuator.*

 - void **precision** (int digits)
- Sets the step value to $1.0 / 10^{\text{digits}}$.*

 - void **range** (double a, double b)
- Sets the minimum and maximum values for the valuator.*

 - double **round** (double)
- Round the passed value to the nearest step increment.*

 - double **step** () const
- Gets or sets the step value.*

 - void **step** (double a, int b)

See double [FI_Valuator::step\(\)](#) const
- void **step** (double s)

See double [FI_Valuator::step\(\)](#) const.
- void **step** (int a)

See double [FI_Valuator::step\(\)](#) const
- double **value** () const

Gets the floating point(double) value.
- int **value** (double)

Sets the current value.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
- Activates the widget.*
- unsigned int **active** () const
- Returns whether the widget is active.*
- int **active_r** () const
- Returns whether the widget and all of its parents are active.*
- [FI_Align](#) **align** () const
- Gets the label alignment.*
- void **align** ([FI_Align](#) alignment)
- Sets the label alignment.*
- long **argument** () const
- Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
- Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
- Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
- virtual [FI_Group](#) * **as_group** ()
- Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Window](#) * **as_window** ()
- Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*

- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)

- Internal use only.*

 - void `deactivate` ()
 - Deactivates the widget.*
 - `FI_Image * deimage` ()
 - Gets the image that is used as part of the widget label.*
 - const `FI_Image * deimage` () const
 - void `deimage` (`FI_Image &img`)
 - Sets the image to use as part of the widget label.*
 - void `deimage` (`FI_Image *img`)
 - Sets the image to use as part of the widget label.*
 - void `do_callback` ()
 - Calls the widget callback.*
 - void `do_callback` (`FI_Widget *o`, long arg)
 - Calls the widget callback.*
 - void `do_callback` (`FI_Widget *o`, void *arg=0)
 - Calls the widget callback.*
 - void `draw_label` (int, int, int, int, `FI_Align`) const
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
 - int `h` () const
 - Gets the widget height.*
 - virtual void `hide` ()
 - Makes a widget invisible.*
 - `FI_Image * image` ()
 - Gets the image that is used as part of the widget label.*
 - const `FI_Image * image` () const
 - void `image` (`FI_Image &img`)
 - Sets the image to use as part of the widget label.*
 - void `image` (`FI_Image *img`)
 - Sets the image to use as part of the widget label.*
 - int `inside` (const `FI_Widget *wgt`) const
 - Checks if this widget is a child of wgt.*
 - int `is_label_copied` () const
 - Returns whether the current label was assigned with `copy_label()`.*
 - const char * `label` () const
 - Gets the current label text.*
 - void `label` (const char *text)
 - Sets the current label pointer.*
 - void `label` (`FI_Labeltype a`, const char *b)
 - Shortcut to set the label text and type in one call.*
 - `FI_Color labelcolor` () const
 - Gets the label color.*
 - void `labelcolor` (`FI_Color c`)
 - Sets the label color.*
 - `FI_Font labelfont` () const
 - Gets the font to use.*
 - void `labelfont` (`FI_Font f`)
 - Sets the font to use.*
 - `FI_Fontsize labelsize` () const
 - Gets the font size in pixels.*
 - void `labelsize` (`FI_Fontsize pix`)
 - Sets the font size in pixels.*

- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FI_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

- Gets the widget type.*
- void `type` (uchar t)
 - Sets the widget type.*
- int `use_accents_menu` ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * `user_data` () const
 - Gets the user data for this widget.*
- void `user_data` (void *v)
 - Sets the user data for this widget.*
- unsigned int `visible` () const
 - Returns whether a widget is visible.*
- unsigned int `visible_focus` ()
 - Checks whether this widget has a visible focus.*
- void `visible_focus` (int v)
 - Modifies keyboard focus navigation.*
- int `visible_r` () const
 - Returns whether a widget and all its parents are visible.*
- int `w` () const
 - Gets the widget width.*
- `FI_When when` () const
 - Returns the conditions under which the callback is called.*
- void `when` (uchar i)
 - Sets the flags used to decide when a callback is called.*
- `FI_Window * window` () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int `x` () const
 - Gets the widget position in its window.*
- int `y` () const
 - Gets the widget position in its window.*
- virtual `~FI_Widget` ()
 - Destroys the widget.*

Public Attributes

- `FI_Input input`

Protected Member Functions

- void `draw` ()
 - Draws the widget.*

Protected Member Functions inherited from `FI_Valuator`

- `FI_Valuator` (int X, int Y, int W, int H, const char *L)
 - Creates a new `FI_Valuator` widget using the given position, size, and label string.*
- void `handle_drag` (double newvalue)
 - Called during a drag operation, after an `FL_WHEN_CHANGED` event is received and before the callback.*
- void `handle_push` ()
 - Stores the current value in the previous value.*
- void `handle_release` ()
 - Called after an `FL_WHEN_RELEASE` event is received and before the callback.*
- int `horizontal` () const

- Tells if the valuator is an FL_HORIZONTAL one.*
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

flags possible values enumeration.

9.148.1 Detailed Description

The [FI_Value_Input](#) widget displays a numeric value.

The user can click in the text field and edit it - there is in fact a hidden [FI_Input](#) widget with type([FL_FLOAT_INPUT](#)) or type([FL_INT_INPUT](#)) in there - and when they hit return or tab the value updates to what they typed and the callback is done.

If [step\(\)](#) is non-zero and integral, then the range of numbers is limited to integers instead of floating point numbers. As well as displaying the value as an integer, typed input is also limited to integer values, even if the hidden [FI_Input](#) widget is of type([FL_FLOAT_INPUT](#)).

If [step\(\)](#) is non-zero, the user can also drag the mouse across the object and thus slide the value. The left button moves one [step\(\)](#) per pixel, the middle by 10 [step\(\)](#), and the right button by 100 * [step\(\)](#). It is therefore impossible to select text by dragging across it, although clicking can still move the insertion cursor.

If [step\(\)](#) is non-zero and integral, then the range of numbers are limited to integers instead of floating point values.

Figure 9.49 FI_Value_Input

9.148.2 Constructor & Destructor Documentation

9.148.2.1 FI_Value_Input()

```
Fl_Value_Input::Fl_Value_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [FI_Value_Input](#) widget using the given position, size, and label string. The default boxtype is [FL_DOWN_BOX](#).

9.148.3 Member Function Documentation

9.148.3.1 cursor_color() [1/2]

```
Fl_Color Fl_Value_Input::cursor_color ( ) const [inline]
```

Gets the color of the text cursor.

The text cursor is black by default.

9.148.3.2 cursor_color() [2/2]

```
void Fl_Value_Input::cursor_color (
    Fl_Color n ) [inline]
```

Sets the color of the text cursor.
The text cursor is black by default.

9.148.3.3 draw()

```
void Fl_Value_Input::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                         // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

9.148.3.4 handle()

```
int Fl_Value_Input::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

9.148.3.5 resize()

```
void Fl_Value_Input::resize (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

Changes the size or position of the widget.

This is a virtual function so that the widget may implement its own handling of resizing. The default version does *not* call the [redraw\(\)](#) method, but instead relies on the parent widget to do so because the parent may know a faster way to update the display, such as scrolling from the old position.

Some window managers under X11 call [resize\(\)](#) a lot more often than needed. Please verify that the position or size of a widget did actually change before doing any extensive calculations.

position(X, Y) is a shortcut for `resize(X, Y, w(), h())`, and `size(W, H)` is a shortcut for `resize(x(), y(), W, H)`.

Parameters

in	<i>x,y</i>	new position relative to the parent window
in	<i>w,h</i>	new size

See also

[position\(int,int\)](#), [size\(int,int\)](#)

Reimplemented from [Fl_Widget](#).

9.148.3.6 shortcut() [1/2]

```
int Fl_Value_Input::shortcut ( ) const [inline]
```

Returns the current shortcut key for the Input.

See also

[Fl_Value_Input::shortcut\(int\)](#)

9.148.3.7 shortcut() [2/2]

```
void Fl_Value_Input::shortcut (
    int s ) [inline]
```

Sets the shortcut key to *s*.

Setting this overrides the use of '&' in the [label\(\)](#). The value is a bitwise OR of a key and a set of shift flags, for example `FL_ALT | 'a'`, `FL_ALT | (FL_F + 10)`, or just 'a'. A value of 0 disables the shortcut.

The key can be any value returned by [Fl::event_key\(\)](#), but will usually be an ASCII letter. Use a lower-case letter unless you require the shift key to be held down.

The shift flags can be any set of values accepted by [Fl::event_state\(\)](#). If the bit is on that shift key must be pushed. Meta, Alt, Ctrl, and Shift must be off if they are not in the shift flags (zero for the other bits indicates a "don't care" setting).

9.148.3.8 soft()

```
char Fl_Value_Input::soft ( ) const [inline]
```

If "soft" is turned on, the user is allowed to drag the value outside the range.

If they drag the value to one of the ends, let go, then grab again and continue to drag, they can get to any value. The default is true.

9.148.3.9 textcolor()

```
Fl_Color Fl_Value_Input::textcolor ( ) const [inline]
```

Gets the color of the text in the value box.

9.148.3.10 textfont() [1/2]

```
Fl_Font Fl_Value_Input::textfont ( ) const [inline]
```

Gets the typeface of the text in the value box.

9.148.3.11 textfont() [2/2]

```
void Fl_Value_Input::textfont (
    Fl_Font s ) [inline]
```

Sets the typeface of the text in the value box.

9.148.3.12 `textsize()` [1/2]

```
Fl_Fontsize Fl_Value_Input::textsize ( ) const [inline]
```

Gets the size of the text in the value box.

9.148.3.13 `textsize()` [2/2]

```
void Fl_Value_Input::textsize (
    Fl_Fontsize s ) [inline]
```

Sets the size of the text in the value box.

The documentation for this class was generated from the following files:

- `Fl_Value_Input.H`
- `Fl_Value_Input.cxx`

9.149 `Fl_Value_Output` Class Reference

The `Fl_Value_Output` widget displays a floating point value.

```
#include <Fl_Value_Output.H>
```

Inheritance diagram for `Fl_Value_Output`:

**Public Member Functions**

- `Fl_Value_Output` (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
 - Creates a new Fl_Value_Output widget using the given position, size, and label string.*
- int `handle` (int)
 - Handles the specified event.*
- uchar `soft` () const
 - If "soft" is turned on, the user is allowed to drag the value outside the range.*
- void `soft` (uchar *s*)
 - If "soft" is turned on, the user is allowed to drag the value outside the range.*
- `Fl_Color` `textcolor` () const
 - Sets the color of the text in the value box.*
- void `textcolor` (`Fl_Color` *s*)
 - Gets the color of the text in the value box.*
- `Fl_Font` `textfont` () const
 - Gets the typeface of the text in the value box.*
- void `textfont` (`Fl_Font` *s*)
 - Sets the typeface of the text in the value box.*
- `Fl_Fontsize` `textsize` () const
 - Gets the size of the text in the value box.*
- void `textsize` (`Fl_Fontsize` *s*)

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double FI_Valuator::step() const
- void **step** (double s)
See double FI_Valuator::step() const.
- void **step** (int a)
See double FI_Valuator::step() const
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (FI_Align alignment)

- Sets the label alignment.*

 - long [argument](#) () const
 - Gets the current user data (long) argument that is passed to the callback function.*
 - void [argument](#) (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
 - virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
 - Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
 - virtual [FI_Group](#) * [as_group](#) ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
 - virtual [FI_Window](#) * [as_window](#) ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
 - [FI_Boxtype](#) [box](#) () const
 - Gets the box type of the widget.*
 - void [box](#) ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
 - [FI_Callback_p](#) [callback](#) () const
 - Gets the current callback function for the widget.*
 - void [callback](#) ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
 - void [callback](#) ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function for the widget.*
 - void [callback](#) ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
 - void [callback](#) ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
 - unsigned int [changed](#) () const
 - Checks if the widget value changed since the last callback.*
 - void [clear_active](#) ()
 - Marks the widget as inactive without sending events or changing focus.*
 - void [clear_changed](#) ()
 - Marks the value of the widget as unchanged.*
 - void [clear_damage](#) ([uchar](#) c=0)
 - Clears or sets the damage flags.*
 - void [clear_output](#) ()
 - Sets a widget to accept input.*
 - void [clear_visible](#) ()
 - Hides the widget.*
 - void [clear_visible_focus](#) ()
 - Disables keyboard focus navigation with this widget.*
 - [FI_Color](#) [color](#) () const
 - Gets the background color of the widget.*
 - void [color](#) ([FI_Color](#) bg)
 - Sets the background color of the widget.*
 - void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
 - Sets the background and selection color of the widget.*
 - [FI_Color](#) [color2](#) () const
 - For back compatibility only.*
 - void [color2](#) (unsigned a)
 - For back compatibility only.*
 - int [contains](#) (const [FI_Widget](#) *w) const
 - Checks if w is a child of this widget.*

- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) (uchar c)
Sets the damage bits for the widget.
- void [damage](#) (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FL_Image * deimage](#) ()
Gets the image that is used as part of the widget label.
- const [FL_Image * deimage](#) () const
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label.
- void [do_callback](#) ()
Calls the widget callback.
- void [do_callback](#) ([FL_Widget](#) *o, long arg)
Calls the widget callback.
- void [do_callback](#) ([FL_Widget](#) *o, void *arg=0)
Calls the widget callback.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- [FL_Image * image](#) ()
Gets the image that is used as part of the widget label.
- const [FL_Image * image](#) () const
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- [FL_Color labelcolor](#) () const

- Gets the label color.*
- void [labelcolor](#) ([FI_Color](#) c)
Sets the label color.
- [FI_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
Sets the font to use.
- [FI_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FI_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.

- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) ()
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)
Sets the flags used to decide when a callback is called.
- [FI_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Protected Member Functions

- void [draw](#) ()
Draws the widget.

Protected Member Functions inherited from [FI_Valuator](#)

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FI_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an `FL_WHEN_CHANGED` event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an `FL_WHEN_RELEASE` event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an `FL_HORIZONTAL` one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)

Internal use only.

- void `y` (int `v`)

Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void `default_callback` ([FI_Widget](#) *`cb`, void *`d`)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *`t`)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *`t`, const bool `require_alt=false`)
Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 , `USERFLAG1` = 1<<31 }
flags possible values enumeration.

9.149.1 Detailed Description

The [FI_Value_Output](#) widget displays a floating point value.

If `step()` is not zero, the user can adjust the value by dragging the mouse left and right. The left button moves one `step()` per pixel, the middle by `10 * step()`, and the right button by `100 * step()`.

This is much lighter-weight than [FI_Value_Input](#) because it contains no text editing code or character buffer.

Figure 9.50 [FI_Value_Output](#)

9.149.2 Constructor & Destructor Documentation

9.149.2.1 [FI_Value_Output\(\)](#)

```
FI_Value_Output::FI_Value_Output (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [FI_Value_Output](#) widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

Inherited destructor destroys the Valuator.

9.149.3 Member Function Documentation

9.149.3.1 draw()

```
void Fl_Value_Output::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                          // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

9.149.3.2 handle()

```
int Fl_Value_Output::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

9.149.3.3 soft() [1/2]

```
uchar Fl_Value_Output::soft ( ) const [inline]
```

If "soft" is turned on, the user is allowed to drag the value outside the range.

If they drag the value to one of the ends, let go, then grab again and continue to drag, they can get to any value.

Default is one.

9.149.3.4 soft() [2/2]

```
void Fl_Value_Output::soft (
    uchar s ) [inline]
```

If "soft" is turned on, the user is allowed to drag the value outside the range.

If they drag the value to one of the ends, let go, then grab again and continue to drag, they can get to any value.

Default is one.

9.149.3.5 textcolor() [1/2]

```
Fl_Color Fl_Value_Output::textcolor ( ) const [inline]
```

Sets the color of the text in the value box.

9.149.3.6 textcolor() [2/2]

```
void Fl_Value_Output::textcolor (
    Fl_Color s ) [inline]
```

Gets the color of the text in the value box.

9.149.3.7 textfont() [1/2]

```
Fl_Font Fl_Value_Output::textfont ( ) const [inline]
```

Gets the typeface of the text in the value box.

9.149.3.8 textfont() [2/2]

```
void Fl_Value_Output::textfont (
    Fl_Font s ) [inline]
```

Sets the typeface of the text in the value box.

9.149.3.9 textsize()

```
Fl_Fontsize Fl_Value_Output::textsize ( ) const [inline]
```

Gets the size of the text in the value box.

The documentation for this class was generated from the following files:

- Fl_Value_Output.H
- Fl_Value_Output.cxx

9.150 Fl_Value_Slider Class Reference

The [Fl_Value_Slider](#) widget is a [Fl_Slider](#) widget with a box displaying the current value.

```
#include <Fl_Value_Slider.H>
```

Inheritance diagram for [Fl_Value_Slider](#):

Public Member Functions

- [FI_Value_Slider](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Value_Slider](#) widget using the given position, size, and label string.
- int [handle](#) (int)
Handles the specified event.
- [FI_Color](#) [textcolor](#) () const
Gets the color of the text in the value box.
- void [textcolor](#) ([FI_Color](#) s)
Sets the color of the text in the value box.
- [FI_Font](#) [textfont](#) () const
Gets the typeface of the text in the value box.
- void [textfont](#) ([FI_Font](#) s)
Sets the typeface of the text in the value box.
- [FI_Fontsize](#) [textsize](#) () const
Gets the size of the text in the value box.
- void [textsize](#) ([FI_Fontsize](#) s)
Sets the size of the text in the value box.

Public Member Functions inherited from [FI_Slider](#)

- void [bounds](#) (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- [FI_Slider](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FI_Slider](#) widget using the given position, size, and label string.
- [FI_Slider](#) ([uchar](#) t, int X, int Y, int W, int H, const char *L)
Creates a new [FI_Slider](#) widget using the given type, position, size, and label string.
- int [scrollvalue](#) (int pos, int [size](#), int first, int total)
Sets the size and position of the sliding knob in the box.
- [FI_Boxtype](#) [slider](#) () const
Gets the slider box type.
- void [slider](#) ([FI_Boxtype](#) c)
Sets the slider box type.
- float [slider_size](#) () const
Get the dimensions of the moving piece of slider.
- void [slider_size](#) (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from [FI_Valuator](#)

- void [bounds](#) (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double [clamp](#) (double)
Clamps the passed value to the valuator range.
- virtual int [format](#) (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double [increment](#) (double, int)
Adds n times the step value to the passed value.
- double [maximum](#) () const
Gets the maximum value for the valuator.
- void [maximum](#) (double a)
Sets the maximum value for the valuator.

- double [minimum](#) () const
Gets the minimum value for the valuator.
- void [minimum](#) (double a)
Sets the minimum value for the valuator.
- void [precision](#) (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void [range](#) (double a, double b)
Sets the minimum and maximum values for the valuator.
- double [round](#) (double)
Round the passed value to the nearest step increment.
- double [step](#) () const
Gets or sets the step value.
- void [step](#) (double a, int b)
See double [FI_Valuator::step\(\)](#) const
- void [step](#) (double s)
See double [FI_Valuator::step\(\)](#) const.
- void [step](#) (int a)
See double [FI_Valuator::step\(\)](#) const
- double [value](#) () const
Gets the floating point(double) value.
- int [value](#) (double)
Sets the current value.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))

- Sets the box type for the widget.*

 - `FI_Callback_p callback () const`
- Gets the current callback function for the widget.*

 - `void callback (FI_Callback *cb)`
- Sets the current callback function for the widget.*

 - `void callback (FI_Callback *cb, void *p)`
- Sets the current callback function for the widget.*

 - `void callback (FI_Callback0 *cb)`
- Sets the current callback function for the widget.*

 - `void callback (FI_Callback1 *cb, long p=0)`
- Sets the current callback function for the widget.*

 - `unsigned int changed () const`
- Checks if the widget value changed since the last callback.*

 - `void clear_active ()`
- Marks the widget as inactive without sending events or changing focus.*

 - `void clear_changed ()`
- Marks the value of the widget as unchanged.*

 - `void clear_damage (uchar c=0)`
- Clears or sets the damage flags.*

 - `void clear_output ()`
- Sets a widget to accept input.*

 - `void clear_visible ()`
- Hides the widget.*

 - `void clear_visible_focus ()`
- Disables keyboard focus navigation with this widget.*

 - `FI_Color color () const`
- Gets the background color of the widget.*

 - `void color (FI_Color bg)`
- Sets the background color of the widget.*

 - `void color (FI_Color bg, FI_Color sel)`
- Sets the background and selection color of the widget.*

 - `FI_Color color2 () const`
- For back compatibility only.*

 - `void color2 (unsigned a)`
- For back compatibility only.*

 - `int contains (const FI_Widget *w) const`
- Checks if w is a child of this widget.*

 - `void copy_label (const char *new_label)`
- Sets the current label.*

 - `void copy_tooltip (const char *text)`
- Sets the current tooltip text.*

 - `uchar damage () const`
- Returns non-zero if `draw()` needs to be called.*

 - `void damage (uchar c)`
- Sets the damage bits for the widget.*

 - `void damage (uchar c, int x, int y, int w, int h)`
- Sets the damage bits for an area inside the widget.*

 - `int damage_resize (int, int, int, int)`
- Internal use only.*

 - `void deactivate ()`
- Deactivates the widget.*

- `FI_Image * deimage ()`
Gets the image that is used as part of the widget label.
- `const FI_Image * deimage () const`
- `void deimage (FI_Image &img)`
Sets the image to use as part of the widget label.
- `void deimage (FI_Image *img)`
Sets the image to use as part of the widget label.
- `void do_callback ()`
Calls the widget callback.
- `void do_callback (FI_Widget *o, long arg)`
Calls the widget callback.
- `void do_callback (FI_Widget *o, void *arg=0)`
Calls the widget callback.
- `void draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`
Gets the widget height.
- `virtual void hide ()`
Makes a widget invisible.
- `FI_Image * image ()`
Gets the image that is used as part of the widget label.
- `const FI_Image * image () const`
- `void image (FI_Image &img)`
Sets the image to use as part of the widget label.
- `void image (FI_Image *img)`
Sets the image to use as part of the widget label.
- `int inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- `void labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fontsize labelsize () const`
Gets the font size in pixels.
- `void labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FI_Labeltype a)`

- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.

- void `type` (`uchar t`)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const
Gets the user data for this widget.
- void `user_data` (void *v)
Sets the user data for this widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` ()
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (`uchar i`)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Protected Member Functions

- void `draw` ()
Draws the widget.

Protected Member Functions inherited from `FI_Slider`

- void `draw` (int, int, int, int)
- int `handle` (int, int, int, int, int)

Protected Member Functions inherited from `FI_Valuator`

- `FI_Valuator` (int X, int Y, int W, int H, const char *L)
Creates a new `FI_Valuator` widget using the given position, size, and label string.
- void `handle_drag` (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void `handle_push` ()
Stores the current value in the previous value.
- void `handle_release` ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int `horizontal` () const

- Tells if the valuator is an FL_HORIZONTAL one.*
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from Fl_Widget

- enum {
 - INACTIVE = 1<<0 , INVISIBLE = 1<<1 , OUTPUT = 1<<2 , NOBORDER = 1<<3 ,
 - FORCE_POSITION = 1<<4 , NON_MODAL = 1<<5 , SHORTCUT_LABEL = 1<<6 , CHANGED = 1<<7
 - ,
 - OVERRIDE = 1<<8 , VISIBLE_FOCUS = 1<<9 , COPIED_LABEL = 1<<10 , CLIP_CHILDREN = 1<<11
 - ,
 - MENU_WINDOW = 1<<12 , TOOLTIP_WINDOW = 1<<13 , MODAL = 1<<14 , NO_OVERLAY = 1<<15
 - ,
 - GROUP_RELATIVE = 1<<16 , COPIED_TOOLTIP = 1<<17 , FULLSCREEN = 1<<18 , MAC_USE_ACCENTS_MENU = 1<<19 ,
 - USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 , USERFLAG1 = 1<<31 }

flags possible values enumeration.

9.150.1 Detailed Description

The [Fl_Value_Slider](#) widget is a [Fl_Slider](#) widget with a box displaying the current value.

Figure 9.51 Fl_Value_Slider

9.150.2 Constructor & Destructor Documentation

9.150.2.1 Fl_Value_Slider()

```
Fl_Value_Slider::Fl_Value_Slider (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0 )
```

Creates a new [Fl_Value_Slider](#) widget using the given position, size, and label string. The default boxtype is `FL_DOWN_BOX`.

9.150.3 Member Function Documentation

9.150.3.1 draw()

```
void Fl_Value_Slider::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll; // scroll is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Slider](#).

9.150.3.2 handle()

```
int Fl_Value_Slider::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

<code>in</code>	<code>event</code>	the kind of event received
-----------------	--------------------	----------------------------

Return values

<code>0</code>	if the event was not used or understood
<code>1</code>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Slider](#).

9.150.3.3 `textcolor()` [1/2]

```
Fl_Color Fl_Value_Slider::textcolor ( ) const [inline]
```

Gets the color of the text in the value box.

9.150.3.4 `textcolor()` [2/2]

```
void Fl_Value_Slider::textcolor (
    Fl_Color s ) [inline]
```

Sets the color of the text in the value box.

9.150.3.5 `textfont()` [1/2]

```
Fl_Font Fl_Value_Slider::textfont ( ) const [inline]
```

Gets the typeface of the text in the value box.

9.150.3.6 `textfont()` [2/2]

```
void Fl_Value_Slider::textfont (
    Fl_Font s ) [inline]
```

Sets the typeface of the text in the value box.

9.150.3.7 `textsize()` [1/2]

```
Fl_Fontsize Fl_Value_Slider::textsize ( ) const [inline]
```

Gets the size of the text in the value box.

9.150.3.8 `textsize()` [2/2]

```
void Fl_Value_Slider::textsize (
    Fl_Fontsize s ) [inline]
```

Sets the size of the text in the value box.

The documentation for this class was generated from the following files:

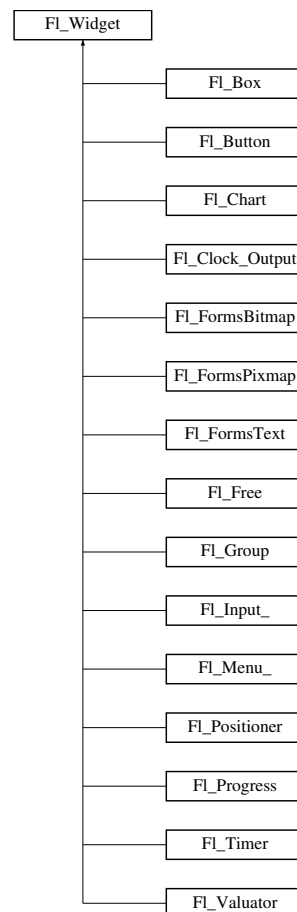

- Fl_Value_Slider.H
- Fl_Value_Slider.cxx

9.151 Fl_Widget Class Reference

`Fl_Widget` is the base class for all widgets in FLTK.

```
#include <Fl_Widget.H>
```

Inheritance diagram for `Fl_Widget`:

**Public Member Functions**

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
Activates the widget.
- unsigned int `active` () const
Returns whether the widget is active.
- int `active_r` () const

- Returns whether the widget and all of its parents are active.*

 - `FI_Align align () const`
Gets the label alignment.
 - `void align (FI_Align alignment)`
Sets the label alignment.
 - `long argument () const`
Gets the current user data (long) argument that is passed to the callback function.
 - `void argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.
 - virtual class `FI_Gl_Window * as_gl_window ()`
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
 - virtual `FI_Group * as_group ()`
Returns an `FI_Group` pointer if this widget is an `FI_Group`.
 - virtual `FI_Window * as_window ()`
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
 - `FI_Boxtype box () const`
Gets the box type of the widget.
 - `void box (FI_Boxtype new_box)`
Sets the box type for the widget.
 - `FI_Callback_p callback () const`
Gets the current callback function for the widget.
 - `void callback (FI_Callback *cb)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback *cb, void *p)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback0 *cb)`
Sets the current callback function for the widget.
 - `void callback (FI_Callback1 *cb, long p=0)`
Sets the current callback function for the widget.
 - `unsigned int changed () const`
Checks if the widget value changed since the last callback.
 - `void clear_active ()`
Marks the widget as inactive without sending events or changing focus.
 - `void clear_changed ()`
Marks the value of the widget as unchanged.
 - `void clear_damage (uchar c=0)`
Clears or sets the damage flags.
 - `void clear_output ()`
Sets a widget to accept input.
 - `void clear_visible ()`
Hides the widget.
 - `void clear_visible_focus ()`
Disables keyboard focus navigation with this widget.
 - `FI_Color color () const`
Gets the background color of the widget.
 - `void color (FI_Color bg)`
Sets the background color of the widget.
 - `void color (FI_Color bg, FI_Color sel)`
Sets the background and selection color of the widget.
 - `FI_Color color2 () const`
For back compatibility only.

- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)
Sets the damage bits for the widget.
- void `damage` (`uchar c`, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * deimage` () const
- void `deimage` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget *o`, void *arg=0)
Calls the widget callback.
- virtual void `draw` ()=0
Draws the widget.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual int `handle` (int event)
Handles the specified event.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image * image` () const
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const

- Returns whether the current label was assigned with [copy_label\(\)](#).*
- `const char * label () const`

Gets the current label text.
- `void label (const char *text)`

Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`

Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`

Gets the label color.
- `void labelcolor (FI_Color c)`

Sets the label color.
- `FI_Font labelfont () const`

Gets the font to use.
- `void labelfont (FI_Font f)`

Sets the font to use.
- `FI_Fontsize labelsize () const`

Gets the font size in pixels.
- `void labelsize (FI_Fontsize pix)`

Sets the font size in pixels.
- `FI_Labeltype labeltype () const`

Gets the label type.
- `void labeltype (FI_Labeltype a)`

Sets the label type.
- `void measure_label (int &ww, int &hh) const`

*Sets width *ww* and height *hh* accordingly with the label size.*
- `unsigned int output () const`

Returns if a widget is used for output only.
- `FI_Group * parent () const`

Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`

Internal use only - "for hacks only".
- `void position (int X, int Y)`

Repositions the window or widget.
- `void redraw ()`

Schedules the drawing of the widget.
- `void redraw_label ()`

Schedules the drawing of the label.
- `virtual void resize (int x, int y, int w, int h)`

Changes the size or position of the widget.
- `FI_Color selection_color () const`

Gets the selection color.
- `void selection_color (FI_Color a)`

Sets the selection color.
- `void set_active ()`

Marks the widget as active without sending events or changing focus.
- `void set_changed ()`

Marks the value of the widget as changed.
- `void set_output ()`

Sets a widget to output only.
- `void set_visible ()`

Makes the widget visible.

- void `set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- virtual void `show ()`
Makes a widget visible.
- void `size (int W, int H)`
Changes the size of the widget.
- int `take_focus ()`
Gives the widget the keyboard focus.
- unsigned int `takeevents () const`
Returns if the widget is able to take events.
- int `test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip () const`
Gets the current tooltip text.
- void `tooltip (const char *text)`
Sets the current tooltip text.
- `FI_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- void `type (uchar t)`
Sets the widget type.
- int `use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data () const`
Gets the user data for this widget.
- void `user_data (void *v)`
Sets the user data for this widget.
- unsigned int `visible () const`
Returns whether a widget is visible.
- unsigned int `visible_focus ()`
Checks whether this widget has a visible focus.
- void `visible_focus (int v)`
Modifies keyboard focus navigation.
- int `visible_r () const`
Returns whether a widget and all its parents are visible.
- int `w () const`
Gets the widget width.
- `FI_When when () const`
Returns the conditions under which the callback is called.
- void `when (uchar i)`
Sets the flags used to decide when a callback is called.
- `FI_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x () const`
Gets the widget position in its window.
- int `y () const`
Gets the widget position in its window.
- virtual `~FI_Widget ()`
Destroys the widget.

Static Public Member Functions

- static void `default_callback` (`FI_Widget *cb`, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types

- enum {
`INACTIVE = 1<<0` , `INVISIBLE = 1<<1` , `OUTPUT = 1<<2` , `NOBORDER = 1<<3` ,
`FORCE_POSITION = 1<<4` , `NON_MODAL = 1<<5` , `SHORTCUT_LABEL = 1<<6` , `CHANGED = 1<<7`
 ,
`OVERRIDE = 1<<8` , `VISIBLE_FOCUS = 1<<9` , `COPIED_LABEL = 1<<10` , `CLIP_CHILDREN = 1<<11`
 ,
`MENU_WINDOW = 1<<12` , `TOOLTIP_WINDOW = 1<<13` , `MODAL = 1<<14` , `NO_OVERLAY = 1<<15`
 ,
`GROUP_RELATIVE = 1<<16` , `COPIED_TOOLTIP = 1<<17` , `FULLSCREEN = 1<<18` , `MAC_USE_ACCENTS_MENU = 1<<19` ,
`USERFLAG3 = 1<<29` , `USERFLAG2 = 1<<30` , `USERFLAG1 = 1<<31` }
flags possible values enumeration.

Protected Member Functions

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (`FI_Boxtype t`, `FI_Color c`) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (`FI_Boxtype t`, int x, int y, int w, int h, `FI_Color c`) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` ()
draws a focus rectangle around the widget
- void `draw_focus` (`FI_Boxtype t`, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.

- void `x` (int `v`)
Internal use only.
- void `y` (int `v`)
Internal use only.

Friends

- class `FI_Group`

9.151.1 Detailed Description

`FI_Widget` is the base class for all widgets in FLTK.

You can't create one of these because the constructor is not public. However you can subclass it.

All "property" accessing methods, such as `color()`, `parent()`, or `argument()` are implemented as trivial inline functions and thus are as fast and small as accessing fields in a structure. Unless otherwise noted, the property setting methods such as `color(n)` or `label(s)` are also trivial inline functions, even if they change the widget's appearance. It is up to the user code to call `redraw()` after these.

9.151.2 Member Enumeration Documentation

9.151.2.1 anonymous enum

anonymous enum [protected]
flags possible values enumeration.
See `activate()`, `output()`, `visible()`, `changed()`, `set_visible_focus()`

Enumerator

INACTIVE	the widget can't receive focus, and is disabled but potentially visible
INVISIBLE	the widget is not drawn, but can receive a few special events
OUTPUT	for output only
NOBORDER	don't draw a decoration (FI_Window)
FORCE_POSITION	don't let the window manager position the window (FI_Window)
NON_MODAL	this is a hovering toolbar window (FI_Window)
SHORTCUT_LABEL	the label contains a shortcut we need to draw
CHANGED	the widget value changed
OVERRIDE	position window on top (FI_Window)
VISIBLE_FOCUS	accepts keyboard focus navigation if the widget can have the focus
COPIED_LABEL	the widget label is internally copied, its destruction is handled by the widget
CLIP_CHILDREN	all drawing within this widget will be clipped (FI_Group)
MENU_WINDOW	a temporary popup window, dismissed by clicking outside (FI_Window)
TOOLTIP_WINDOW	a temporary popup, transparent to events, and dismissed easily (FI_Window)
MODAL	a window blocking input to all other winows (FI_Window)
NO_OVERLAY	window not using a hardware overlay plane (FI_Menu_Window)
GROUP_RELATIVE	Reserved, not implemented. DO NOT USE.
COPIED_TOOLTIP	the widget tooltip is internally copied, its destruction is handled by the widget
FULLSCREEN	a fullscreen window (FI_Window)
MAC_USE_ACCENTS_MENU	On the Mac OS platform, pressing and holding a key on the keyboard opens an accented-character menu window (FI_Input_ , FI_Text_Editor)
USERFLAG3	reserved for 3rd party extensions
USERFLAG2	reserved for 3rd party extensions

Enumerator

USERFLAG1	reserved for 3rd party extensions
-----------	-----------------------------------

9.151.3 Constructor & Destructor Documentation

9.151.3.1 Fl_Widget()

```
Fl_Widget::Fl_Widget (
    int x,
    int y,
    int w,
    int h,
    const char * label = 0L ) [protected]
```

Creates a widget at the given position and size.

The [Fl_Widget](#) is a protected constructor, but all derived widgets have a matching public constructor. It takes a value for `x()`, `y()`, `w()`, `h()`, and an optional value for `label()`.

Parameters

in	<code>x,y</code>	the position of the widget relative to the enclosing window
in	<code>w,h</code>	size of the widget in pixels
in	<code>label</code>	optional text for the widget label

9.151.3.2 ~Fl_Widget()

```
Fl_Widget::~~Fl_Widget ( ) [virtual]
```

Destroys the widget.

Destroys the widget, taking care of throwing focus before if any.

Destroying single widgets is not very common. You almost always want to destroy the parent group instead, which will destroy all of the child widgets and groups in that group.

Since

FLTK 1.3, the widget's destructor removes the widget from its parent group, if it is member of a group.

Destruction removes the widget from any parent group! And groups when destroyed destroy all their children. This is convenient and fast.

9.151.4 Member Function Documentation

9.151.4.1 activate()

```
void Fl_Widget::activate ( )
```

Activates the widget.

Changing this value will send `FL_ACTIVATE` to the widget if `active_r()` is true.

See also

[active\(\)](#), [active_r\(\)](#), [deactivate\(\)](#)

9.151.4.2 active()

```
unsigned int Fl_Widget::active ( ) const [inline]
```

Returns whether the widget is active.

Return values

0	if the widget is inactive
---	---------------------------

See also

[active_r\(\)](#), [activate\(\)](#), [deactivate\(\)](#)

9.151.4.3 active_r()

```
int Fl_Widget::active_r ( ) const
```

Returns whether the widget and all of its parents are active.

Return values

0	if this or any of the parent widgets are inactive
---	---

See also

[active\(\)](#), [activate\(\)](#), [deactivate\(\)](#)

9.151.4.4 align() [1/2]

```
Fl_Align Fl_Widget::align ( ) const [inline]
```

Gets the label alignment.

Returns

label alignment

See also

[label\(\)](#), [align\(Fl_Align\)](#), [Fl_Align](#)

9.151.4.5 align() [2/2]

```
void Fl_Widget::align (
    Fl_Align alignment ) [inline]
```

Sets the label alignment.

This controls how the label is displayed next to or inside the widget. The default value is FL_ALIGN_CENTER, which centers the label inside the widget.

Parameters

in	<i>alignment</i>	new label alignment
----	------------------	---------------------

See also

[align\(\)](#), [Fl_Align](#)

9.151.4.6 argument() [1/2]

```
long Fl_Widget::argument ( ) const [inline]
```

Gets the current user data (long) argument that is passed to the callback function.

Todo The user data value must be implemented using *intptr_t* or similar to avoid 64-bit machine incompatibilities.

9.151.4.7 `argument()` [2/2]

```
void Fl_Widget::argument (
    long v ) [inline]
```

Sets the current user data (long) argument that is passed to the callback function.

Todo The user data value must be implemented using `intptr_t` or similar to avoid 64-bit machine incompatibilities.

9.151.4.8 `as_gl_window()`

```
virtual class Fl_Gl_Window * Fl_Widget::as_gl_window ( ) [inline], [virtual]
```

Returns an `Fl_Gl_Window` pointer if this widget is an `Fl_Gl_Window`.

Use this method if you have a widget (pointer) and need to know whether this widget is derived from `Fl_Gl_Window`. If it returns non-NULL, then the widget in question is derived from `Fl_Gl_Window`.

Return values

<code>NULL</code>	if this widget is not derived from <code>Fl_Gl_Window</code> .
-------------------	--

Note

This method is provided to avoid `dynamic_cast`.

See also

[Fl_Widget::as_group\(\)](#), [Fl_Widget::as_window\(\)](#)

Reimplemented in [Fl_Gl_Window](#).

9.151.4.9 `as_group()`

```
virtual Fl_Group * Fl_Widget::as_group ( ) [inline], [virtual]
```

Returns an `Fl_Group` pointer if this widget is an `Fl_Group`.

Use this method if you have a widget (pointer) and need to know whether this widget is derived from `Fl_Group`. If it returns non-NULL, then the widget in question is derived from `Fl_Group`, and you can use the returned pointer to access its children or other `Fl_Group`-specific methods.

Example:

```
void my_callback (Fl_Widget *w, void *) {
    Fl_Group *g = w->as_group();
    if (g)
        printf ("This group has %d children\n",g->children());
    else
        printf ("This widget is not a group!\n");
}
```

Return values

<code>NULL</code>	if this widget is not derived from <code>Fl_Group</code> .
-------------------	--

Note

This method is provided to avoid `dynamic_cast`.

See also

[Fl_Widget::as_window\(\)](#), [Fl_Widget::as_gl_window\(\)](#)

Reimplemented in [Fl_Group](#).

9.151.4.10 `as_window()`

```
virtual Fl_Window * Fl_Widget::as_window ( ) [inline], [virtual]
```

Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).

Use this method if you have a widget (pointer) and need to know whether this widget is derived from [FI_Window](#). If it returns non-NULL, then the widget in question is derived from [FI_Window](#), and you can use the returned pointer to access its children or other [FI_Window](#)-specific methods.

Return values

NULL	if this widget is not derived from FI_Window .
------	--

Note

This method is provided to avoid `dynamic_cast`.

See also

[FI_Widget::as_group\(\)](#), [FI_Widget::as_gl_window\(\)](#)

Reimplemented in [FI_Window](#).

9.151.4.11 `box()` [1/2]

```
Fl_Boxtype Fl_Widget::box ( ) const [inline]
```

Gets the box type of the widget.

Returns

the current box type

See also

[box\(Fl_Boxtype\)](#), [Fl_Boxtype](#)

9.151.4.12 `box()` [2/2]

```
void Fl_Widget::box (
    Fl_Boxtype new_box ) [inline]
```

Sets the box type for the widget.

This identifies a routine that draws the background of the widget. See [Fl_Boxtype](#) for the available types. The default depends on the widget, but is usually `FL_NO_BOX` or `FL_UP_BOX`.

Parameters

in	<i>new_box</i>	the new box type
----	----------------	------------------

See also

[box\(\)](#), [Fl_Boxtype](#)

9.151.4.13 `callback()` [1/5]

```
Fl_Callback_p Fl_Widget::callback ( ) const [inline]
```

Gets the current callback function for the widget.

Each widget has a single callback.

Returns

current callback

9.151.4.14 callback() [2/5]

```
void Fl_Widget::callback (
    Fl_Callback * cb ) [inline]
```

Sets the current callback function for the widget.
Each widget has a single callback.

Parameters

in	<i>cb</i>	new callback
----	-----------	--------------

9.151.4.15 callback() [3/5]

```
void Fl_Widget::callback (
    Fl_Callback * cb,
    void * p ) [inline]
```

Sets the current callback function for the widget.
Each widget has a single callback.

Parameters

in	<i>cb</i>	new callback
in	<i>p</i>	user data

9.151.4.16 callback() [4/5]

```
void Fl_Widget::callback (
    Fl_Callback0 * cb ) [inline]
```

Sets the current callback function for the widget.
Each widget has a single callback.

Parameters

in	<i>cb</i>	new callback
----	-----------	--------------

9.151.4.17 callback() [5/5]

```
void Fl_Widget::callback (
    Fl_Callback1 * cb,
    long p = 0 ) [inline]
```

Sets the current callback function for the widget.
Each widget has a single callback.

Parameters

in	<i>cb</i>	new callback
in	<i>p</i>	user data

9.151.4.18 changed()

```
unsigned int Fl_Widget::changed ( ) const [inline]
```

Checks if the widget value changed since the last callback.

"Changed" is a flag that is turned on when the user changes the value stored in the widget. This is only used by subclasses of [Fl_Widget](#) that store values, but is in the base class so it is easier to scan all the widgets in a panel

and `do_callback()` on the changed ones in response to an "OK" button.
Most widgets turn this flag off when they do the callback, and when the program sets the stored value.

Return values

0	if the value did not change
---	-----------------------------

See also

[set_changed\(\)](#), [clear_changed\(\)](#)

9.151.4.19 clear_active()

```
void Fl_Widget::clear_active ( ) [inline]
```

Marks the widget as inactive without sending events or changing focus.
This is mainly for specialized use, for normal cases you want [deactivate\(\)](#).

See also

[deactivate\(\)](#)

9.151.4.20 clear_changed()

```
void Fl_Widget::clear_changed ( ) [inline]
```

Marks the value of the widget as unchanged.

See also

[changed\(\)](#), [set_changed\(\)](#)

9.151.4.21 clear_damage()

```
void Fl_Widget::clear_damage (
    uchar c = 0 ) [inline]
```

Clears or sets the damage flags.

Damage flags are cleared when parts of the widget drawing is repaired.

The optional argument `c` specifies the bits that **are set** after the call (default: 0) and **not** the bits that are cleared!

Note

Therefore it is possible to set damage bits with this method, but this should be avoided. Use [damage\(uchar\)](#) instead.

Parameters

in	c	new bitmask of damage flags (default: 0)
----	---	--

See also

[damage\(uchar\)](#), [damage\(\)](#)

9.151.4.22 clear_output()

```
void Fl_Widget::clear_output ( ) [inline]
```

Sets a widget to accept input.

See also

[set_output\(\)](#), [output\(\)](#)

9.151.4.23 `clear_visible()`

```
void Fl_Widget::clear_visible ( ) [inline]
```

Hides the widget.

You must still redraw the parent to see a change in the window. Normally you want to use the [hide\(\)](#) method instead.

9.151.4.24 `clear_visible_focus()`

```
void Fl_Widget::clear_visible_focus ( ) [inline]
```

Disables keyboard focus navigation with this widget.

Normally, all widgets participate in keyboard focus navigation.

See also

[set_visible_focus\(\)](#), [visible_focus\(\)](#), [visible_focus\(int\)](#)

9.151.4.25 `color()` [1/3]

```
Fl_Color Fl_Widget::color ( ) const [inline]
```

Gets the background color of the widget.

Returns

current background color

See also

[color\(Fl_Color\)](#), [color\(Fl_Color, Fl_Color\)](#)

9.151.4.26 `color()` [2/3]

```
void Fl_Widget::color (
    Fl_Color bg ) [inline]
```

Sets the background color of the widget.

The color is passed to the box routine. The color is either an index into an internal table of RGB colors or an RGB color value generated using [fl_rgb_color\(\)](#).

The default for most widgets is FL_BACKGROUND_COLOR. Use [Fl::set_color\(\)](#) to redefine colors in the color map.

Parameters

<code>in</code>	<code>bg</code>	background color
-----------------	-----------------	------------------

See also

[color\(\)](#), [color\(Fl_Color, Fl_Color\)](#), [selection_color\(Fl_Color\)](#)

9.151.4.27 `color()` [3/3]

```
void Fl_Widget::color (
    Fl_Color bg,
    Fl_Color sel ) [inline]
```

Sets the background and selection color of the widget.

The two color form sets both the background and selection colors.

Parameters

in	<i>bg</i>	background color
in	<i>sel</i>	selection color

See also

`color(unsigned)`, `selection_color(unsigned)`

9.151.4.28 color2() [1/2]

```
Fl_Color Fl_Widget::color2 ( ) const [inline]
```

For back compatibility only.

Deprecated Use `selection_color()` instead.

9.151.4.29 color2() [2/2]

```
void Fl_Widget::color2 (
    unsigned a ) [inline]
```

For back compatibility only.

Deprecated Use `selection_color(unsigned)` instead.

9.151.4.30 contains()

```
int Fl_Widget::contains (
    const Fl_Widget * w ) const
```

Checks if *w* is a child of this widget.

Parameters

in	<i>w</i>	potential child widget
----	----------	------------------------

Returns

Returns 1 if *w* is a child of this widget, or is equal to this widget. Returns 0 if *w* is NULL.

9.151.4.31 copy_label()

```
void Fl_Widget::copy_label (
    const char * new_label )
```

Sets the current label.

Unlike `label()`, this method allocates a copy of the label string instead of using the original string pointer.

The internal copy will automatically be freed whenever you assign a new label or when the widget is destroyed.

Parameters

in	<i>new_label</i>	the new label text
----	------------------	--------------------

See also

`label()`

9.151.4.32 copy_tooltip()

```
void Fl_Widget::copy_tooltip (
    const char * text )
```

Sets the current tooltip text.

Unlike [tooltip\(\)](#), this method allocates a copy of the tooltip string instead of using the original string pointer. The internal copy will automatically be freed whenever you assign a new tooltip or when the widget is destroyed. If no tooltip is set, the tooltip of the parent is inherited. Setting a tooltip for a group and setting no tooltip for a child will show the group's tooltip instead. To avoid this behavior, you can set the child's tooltip to an empty string ("").

Parameters

in	<i>text</i>	New tooltip text (an internal copy is made and managed)
----	-------------	---

See also

[tooltip\(const char*\)](#), [tooltip\(\)](#)

9.151.4.33 damage() [1/3]

```
uchar Fl_Widget::damage ( ) const [inline]
```

Returns non-zero if [draw\(\)](#) needs to be called.

The damage value is actually a bit field that the widget subclass can use to figure out what parts to draw.

Returns

a bitmap of flags describing the kind of damage to the widget

See also

[damage\(uchar\)](#), [clear_damage\(uchar\)](#)

9.151.4.34 damage() [2/3]

```
void Fl_Widget::damage (
    uchar c )
```

Sets the damage bits for the widget.

Setting damage bits will schedule the widget for the next redraw.

Parameters

in	<i>c</i>	bitmask of flags to set
----	----------	-------------------------

See also

[damage\(\)](#), [clear_damage\(uchar\)](#)

9.151.4.35 damage() [3/3]

```
void Fl_Widget::damage (
    uchar c,
    int x,
    int y,
    int w,
    int h )
```

Sets the damage bits for an area inside the widget.

Setting damage bits will schedule the widget for the next redraw.

Parameters

in	<i>c</i>	bitmask of flags to set
in	<i>x,y,w,h</i>	size of damaged area

See also

[damage\(\)](#), [clear_damage\(uchar\)](#)

9.151.4.36 deactivate()

```
void Fl_Widget::deactivate ( )
```

Deactivates the widget.

Inactive widgets will be drawn "grayed out", e.g. with less contrast than the active widget. Inactive widgets will not receive any keyboard or mouse button events. Other events (including FL_ENTER, FL_MOVE, FL_LEAVE, FL_SHORTCUT, and others) will still be sent. A widget is only active if [active\(\)](#) is true on it *and all of its parents*.

Changing this value will send FL_DEACTIVATE to the widget if [active_r\(\)](#) is true.

Currently you cannot deactivate [Fl_Window](#) widgets.

See also

[activate\(\)](#), [active\(\)](#), [active_r\(\)](#)

9.151.4.37 default_callback()

```
void Fl_Widget::default_callback (
    Fl_Widget * cb,
    void * d ) [static]
```

The default callback for all widgets that don't set a callback.

This callback function puts a pointer to the widget on the queue returned by [Fl::readqueue\(\)](#).

Relying on the default callback and reading the callback queue with [Fl::readqueue\(\)](#) is not recommended. If you need a callback, you should set one with [Fl_Widget::callback\(Fl_Callback *cb, void *data\)](#) or one of its variants.

Parameters

in	<i>cb</i>	the widget given to the callback
in	<i>d</i>	user data associated with that callback

See also

[callback\(\)](#), [do_callback\(\)](#), [Fl::readqueue\(\)](#)

9.151.4.38 deimage() [1/3]

```
Fl_Image * Fl_Widget::deimage ( ) [inline]
```

Gets the image that is used as part of the widget label.

This image is used when drawing the widget in the inactive state.

Returns

the current image for the deactivated widget

9.151.4.39 deimage() [2/3]

```
void Fl_Widget::deimage (
    Fl_Image & img ) [inline]
```

Sets the image to use as part of the widget label.

This image is used when drawing the widget in the inactive state.

Parameters

in	<i>img</i>	the new image for the deactivated widget
----	------------	--

9.151.4.40 deimage() [3/3]

```
void Fl_Widget::deimage (
    Fl_Image * img ) [inline]
```

Sets the image to use as part of the widget label.

This image is used when drawing the widget in the inactive state.

Parameters

in	<i>img</i>	the new image for the deactivated widget
----	------------	--

9.151.4.41 do_callback() [1/3]

```
void Fl_Widget::do_callback ( ) [inline]
```

Calls the widget callback.

Causes a widget to invoke its callback function with default arguments.

See also

[callback\(\)](#)

9.151.4.42 do_callback() [2/3]

```
void Fl_Widget::do_callback (
    Fl_Widget * o,
    long arg ) [inline]
```

Calls the widget callback.

Causes a widget to invoke its callback function with arbitrary arguments.

Parameters

in	<i>o</i>	call the callback with <i>o</i> as the widget argument
in	<i>arg</i>	call the callback with <i>arg</i> as the user data argument

See also

[callback\(\)](#)

9.151.4.43 do_callback() [3/3]

```
void Fl_Widget::do_callback (
    Fl_Widget * o,
    void * arg = 0 )
```

Calls the widget callback.

Causes a widget to invoke its callback function with arbitrary arguments.

Parameters

in	<i>o</i>	call the callback with <i>o</i> as the widget argument
in	<i>arg</i>	use <i>arg</i> as the user data argument

See also

[callback\(\)](#)

9.151.4.44 draw()

```
virtual void Fl_Widget::draw ( ) [pure virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll; // scroll is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Implemented in [Fl_Adjuster](#), [Fl_Box](#), [Fl_Browser_](#), [Fl_Button](#), [Fl_Cairo_Window](#), [Fl_Chart](#), [Fl_Choice](#), [Fl_Clock_Output](#), [Fl_Counter](#), [Fl_Dial](#), [Fl_File_Input](#), [Fl_FormsBitmap](#), [Fl_FormsPixmap](#), [Fl_Free](#), [Fl_Gl_Window](#), [Fl_Group](#), [Fl_Help_View](#), [Fl_Input](#), [Fl_Light_Button](#), [Fl_Menu_Bar](#), [Fl_Menu_Button](#), [Fl_Pack](#), [Fl_Positioner](#), [Fl_Progress](#), [Fl_Return_Button](#), [Fl_Roller](#), [Fl_Scroll](#), [Fl_Scrollbar](#), [Fl_Slider](#), [Fl_Sys_Menu_Bar](#), [Fl_Tabs](#), [Fl_Text_Display](#), [Fl_Timer](#), [Fl_Tree](#), [Fl_Value_Input](#), [Fl_Value_Output](#), [Fl_Value_Slider](#), [Fl_Window](#), [Fl_FormsText](#), [Fl_Glut_Window](#), and [Fl_Table](#).

9.151.4.45 draw_label() [1/3]

```
void Fl_Widget::draw_label ( ) const [protected]
```

Draws the widget's label at the defined label position.

This is the normal call for a widget's [draw\(\)](#) method.

9.151.4.46 draw_label() [2/3]

```
void Fl_Widget::draw_label (
    int X,
    int Y,
    int W,
    int H ) const [protected]
```

Draws the label in an arbitrary bounding box.

[draw\(\)](#) can use this instead of [draw_label\(void\)](#) to change the bounding box

9.151.4.47 draw_label() [3/3]

```
void Fl_Widget::draw_label (
    int X,
    int Y,
    int W,
    int H,
    Fl_Align a ) const
```

Draws the label in an arbitrary bounding box with an arbitrary alignment.

Anybody can call this to force the label to draw anywhere.

9.151.4.48 h() [1/2]

```
int Fl_Widget::h ( ) const [inline]
```

Gets the widget height.

Returns

the height of the widget in pixels.

9.151.4.49 h() [2/2]

```
void Fl_Widget::h (
    int v ) [inline], [protected]
```

Internal use only.

Use [position\(int,int\)](#), [size\(int,int\)](#) or [resize\(int,int,int,int\)](#) instead.

9.151.4.50 handle()

```
int Fl_Widget::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

Parameters

<code>in</code>	<code>event</code>	the kind of event received
-----------------	--------------------	----------------------------

Return values

<code>0</code>	if the event was not used or understood
<code>1</code>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented in [Fl_Free](#), [Fl_Table](#), [Fl_Text_Display](#), [Fl_Text_Editor](#), [Fl_Tree](#), [Fl_Browser_](#), [Fl_File_Input](#), [Fl_Spinner](#), [Fl_Table_Row](#), [Fl_Tile](#), [Fl_Adjuster](#), [Fl_Box](#), [Fl_Button](#), [Fl_Check_Browser](#), [Fl_Choice](#), [Fl_Clock](#), [Fl_Counter](#), [Fl_Dial](#), [Fl_Gl_Window](#), [Fl_Group](#), [Fl_Help_View](#), [Fl_Input](#), [Fl_Light_Button](#), [Fl_Menu_Bar](#), [Fl_Menu_Button](#), [Fl_Positioner](#), [Fl_Repeat_Button](#), [Fl_Return_Button](#), [Fl_Roller](#), [Fl_Scroll](#), [Fl_Scrollbar](#), [Fl_Secret_Input](#), [Fl_Slider](#), [Fl_Tabs](#), [Fl_Timer](#), [Fl_Value_Input](#), [Fl_Value_Output](#), [Fl_Value_Slider](#), [Fl_Window](#), and [Fl_Glut_Window](#).

9.151.4.51 hide()

```
void Fl_Widget::hide ( ) [virtual]
```

Makes a widget invisible.

See also

[show\(\)](#), [visible\(\)](#), [visible_r\(\)](#)

Reimplemented in [Fl_Browser](#), [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Menu_Window](#), [Fl_Overlay_Window](#), and [Fl_Window](#).

9.151.4.52 image() [1/3]

```
Fl_Image * Fl_Widget::image ( ) [inline]
```

Gets the image that is used as part of the widget label.

This image is used when drawing the widget in the active state.

Returns

the current image

9.151.4.53 image() [2/3]

```
void Fl_Widget::image (
    Fl_Image & img ) [inline]
```

Sets the image to use as part of the widget label.
This image is used when drawing the widget in the active state.

Parameters

in	<i>img</i>	the new image for the label
----	------------	-----------------------------

9.151.4.54 image() [3/3]

```
void Fl_Widget::image (
    Fl_Image * img ) [inline]
```

Sets the image to use as part of the widget label.
This image is used when drawing the widget in the active state.

Parameters

in	<i>img</i>	the new image for the label
----	------------	-----------------------------

9.151.4.55 inside()

```
int Fl_Widget::inside (
    const Fl_Widget * wgt ) const [inline]
```

Checks if this widget is a child of *wgt*.
Returns 1 if this widget is a child of *wgt*, or is equal to *wgt*. Returns 0 if *wgt* is NULL.

Parameters

in	<i>wgt</i>	the possible parent widget.
----	------------	-----------------------------

See also

[contains\(\)](#)

9.151.4.56 is_label_copied()

```
int Fl_Widget::is_label_copied ( ) const [inline]
```

Returns whether the current label was assigned with [copy_label\(\)](#).
This can be useful for temporarily overwriting the widget's label and restoring it later.

Return values

0	current label was assigned with label() .
1	current label was assigned with copy_label() .

9.151.4.57 label() [1/3]

```
const char * Fl_Widget::label ( ) const [inline]
```

Gets the current label text.

Returns

a pointer to the current label text

See also

[label\(const char *\)](#), [copy_label\(const char *\)](#)

9.151.4.58 label() [2/3]

```
void Fl_Widget::label (
    const char * text )
```

Sets the current label pointer.

The label is shown somewhere on or next to the widget. The passed pointer is stored unchanged in the widget (the string is *not* copied), so if you need to set the label to a formatted value, make sure the buffer is static, global, or allocated. The [copy_label\(\)](#) method can be used to make a copy of the label string automatically.

Parameters

<i>in</i>	<i>text</i>	pointer to new label text
-----------	-------------	---------------------------

See also

[copy_label\(\)](#)

9.151.4.59 label() [3/3]

```
void Fl_Widget::label (
    Fl_Labeltype a,
    const char * b ) [inline]
```

Shortcut to set the label text and type in one call.

See also

[label\(const char *\)](#), [labeltype\(Fl_Labeltype\)](#)

9.151.4.60 label_shortcut()

```
unsigned int Fl_Widget::label_shortcut (
    const char * t ) [static]
```

Returns the Unicode value of the '&x' shortcut in a given text.

The given text *t* (usually a widget's label or a menu text) is searched for a '&x' shortcut label, and if found, the Unicode value (code point) of the '&x' shortcut is returned.

Parameters

<i>t</i>	text or label to search for '&x' shortcut.
----------	--

Returns

Unicode (UCS-4) value of shortcut in *t* or 0.

Note

Internal use only.

9.151.4.61 labelcolor() [1/2]

```
Fl_Color Fl_Widget::labelcolor ( ) const [inline]
```

Gets the label color.

The default color is FL_FOREGROUND_COLOR.

Returns

the current label color

9.151.4.62 labelcolor() [2/2]

```
void Fl_Widget::labelcolor (
    Fl_Color c ) [inline]
```

Sets the label color.

The default color is FL_FOREGROUND_COLOR.

Parameters

in	<i>c</i>	the new label color
----	----------	---------------------

9.151.4.63 labelfont() [1/2]

```
Fl_Font Fl_Widget::labelfont ( ) const [inline]
```

Gets the font to use.

Fonts are identified by indexes into a table. The default value uses a Helvetica typeface (Arial for Microsoft® Windows®). The function [Fl::set_font\(\)](#) can define new typefaces.

Returns

current font used by the label

See also

[Fl_Font](#)

9.151.4.64 labelfont() [2/2]

```
void Fl_Widget::labelfont (
    Fl_Font f ) [inline]
```

Sets the font to use.

Fonts are identified by indexes into a table. The default value uses a Helvetica typeface (Arial for Microsoft® Windows®). The function [Fl::set_font\(\)](#) can define new typefaces.

Parameters

in	<i>f</i>	the new font for the label
----	----------	----------------------------

See also

[Fl_Font](#)

9.151.4.65 `labelsize()` [1/2]

```
Fl_Fontsize Fl_Widget::labelsize ( ) const [inline]
```

Gets the font size in pixels.
The default size is 14 pixels.

Returns

the current font size

9.151.4.66 `labelsize()` [2/2]

```
void Fl_Widget::labelsize (
    Fl_Fontsize pix ) [inline]
```

Sets the font size in pixels.

Parameters

<code>in</code>	<code>pix</code>	the new font size
-----------------	------------------	-------------------

See also

[Fl_Fontsize labelsize\(\)](#)

9.151.4.67 `labeltype()` [1/2]

```
Fl_Labeltype Fl_Widget::labeltype ( ) const [inline]
```

Gets the label type.

Returns

the current label type.

See also

[Fl_Labeltype](#)

9.151.4.68 `labeltype()` [2/2]

```
void Fl_Widget::labeltype (
    Fl_Labeltype a ) [inline]
```

Sets the label type.

The label type identifies the function that draws the label of the widget. This is generally used for special effects such as embossing or for using the `label()` pointer as another form of data such as an icon. The value `FL_NORMAL_↔ LABEL` prints the label as plain text.

Parameters

<code>in</code>	<code>a</code>	new label type
-----------------	----------------	----------------

See also

[Fl_Labeltype](#)

9.151.4.69 measure_label()

```
void Fl_Widget::measure_label (
    int & ww,
    int & hh ) const [inline]
```

Sets width `ww` and height `hh` accordingly with the label size.

Labels with images will return `w()` and `h()` of the image.

This calls [fl_measure\(\)](#) internally. For more information about the arguments `ww` and `hh` and word wrapping

See also

[fl_measure\(const char*, int&, int&, int\)](#)

9.151.4.70 output()

```
unsigned int Fl_Widget::output ( ) const [inline]
```

Returns if a widget is used for output only.

[output\(\)](#) means the same as [!active\(\)](#) except it does not change how the widget is drawn. The widget will not receive any events. This is useful for making scrollbars or buttons that work as displays rather than input devices.

Return values

0	if the widget is used for input and output
---	--

See also

[set_output\(\)](#), [clear_output\(\)](#)

9.151.4.71 parent() [1/2]

```
Fl_Group * Fl_Widget::parent ( ) const [inline]
```

Returns a pointer to the parent widget.

Usually this is a [Fl_Group](#) or [Fl_Window](#).

Return values

NULL	if the widget has no parent
------	-----------------------------

See also

[Fl_Group::add\(Fl_Widget*\)](#)

9.151.4.72 parent() [2/2]

```
void Fl_Widget::parent (
    Fl_Group * p ) [inline]
```

Internal use only - "for hacks only".

It is **STRONGLY recommended** not to use this method, because it short-circuits [Fl_Group](#)'s normal widget adding and removing methods, if the widget is already a child widget of another [Fl_Group](#).

Use [Fl_Group::add\(Fl_Widget*\)](#) and/or [Fl_Group::remove\(Fl_Widget*\)](#) instead.

9.151.4.73 position()

```
void Fl_Widget::position (
    int X,
    int Y ) [inline]
```

Repositions the window or widget.
 position(X, Y) is a shortcut for `resize(X, Y, w(), h())`.

Parameters

in	X,Y	new position relative to the parent window
----	-----	--

See also

[resize\(int,int,int,int\)](#), [size\(int,int\)](#)

9.151.4.74 redraw()

```
void Fl_Widget::redraw ( )
```

Schedules the drawing of the widget.
 Marks the widget as needing its [draw\(\)](#) routine called.

9.151.4.75 redraw_label()

```
void Fl_Widget::redraw_label ( )
```

Schedules the drawing of the label.
 Marks the widget or the parent as needing a redraw for the label area of a widget.

9.151.4.76 resize()

```
void Fl_Widget::resize (
    int x,
    int y,
    int w,
    int h ) [virtual]
```

Changes the size or position of the widget.

This is a virtual function so that the widget may implement its own handling of resizing. The default version does *not* call the [redraw\(\)](#) method, but instead relies on the parent widget to do so because the parent may know a faster way to update the display, such as scrolling from the old position.

Some window managers under X11 call [resize\(\)](#) a lot more often than needed. Please verify that the position or size of a widget did actually change before doing any extensive calculations.
 position(X, Y) is a shortcut for `resize(X, Y, w(), h())`, and `size(W, H)` is a shortcut for `resize(x(), y(), W, H)`.

Parameters

in	x,y	new position relative to the parent window
in	w,h	new size

See also

[position\(int,int\)](#), [size\(int,int\)](#)

Reimplemented in [Fl_Browser_](#), [Fl_Input_Choice](#), [Fl_Scroll](#), [Fl_Spinner](#), [Fl_Table](#), [Fl_Text_Display](#), [Fl_Tile](#), [Fl_Window](#), [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Group](#), [Fl_Help_View](#), [Fl_Input_](#), [Fl_Overlay_Window](#), [Fl_Tree](#), and [Fl_Value_Input](#).

9.151.4.77 selection_color() [1/2]

```
Fl_Color Fl_Widget::selection_color ( ) const [inline]
```

Gets the selection color.

Returns

the current selection color

See also

[selection_color\(Fl_Color\)](#), [color\(Fl_Color, Fl_Color\)](#)

9.151.4.78 selection_color() [2/2]

```
void Fl_Widget::selection_color (
    Fl_Color a ) [inline]
```

Sets the selection color.

The selection color is defined for Forms compatibility and is usually used to color the widget when it is selected, although some widgets use this color for other purposes. You can set both colors at once with [color\(Fl_Color bg, Fl_Color sel\)](#).

Parameters

in	a	the new selection color
----	---	-------------------------

See also

[selection_color\(\)](#), [color\(Fl_Color, Fl_Color\)](#)

9.151.4.79 set_active()

```
void Fl_Widget::set_active ( ) [inline]
```

Marks the widget as active without sending events or changing focus.

This is mainly for specialized use, for normal cases you want [activate\(\)](#).

See also

[activate\(\)](#)

9.151.4.80 set_changed()

```
void Fl_Widget::set_changed ( ) [inline]
```

Marks the value of the widget as changed.

See also

[changed\(\)](#), [clear_changed\(\)](#)

9.151.4.81 set_output()

```
void Fl_Widget::set_output ( ) [inline]
```

Sets a widget to output only.

See also

[output\(\)](#), [clear_output\(\)](#)

9.151.4.82 set_visible()

```
void Fl_Widget::set_visible ( ) [inline]
```

Makes the widget visible.

You must still redraw the parent widget to see a change in the window. Normally you want to use the [show\(\)](#) method instead.

9.151.4.83 set_visible_focus()

```
void Fl_Widget::set_visible_focus ( ) [inline]
```

Enables keyboard focus navigation with this widget.

Note, however, that this will not necessarily mean that the widget will accept focus, but for widgets that can accept focus, this method enables it if it has been disabled.

See also

[visible_focus\(\)](#), [clear_visible_focus\(\)](#), [visible_focus\(int\)](#)

9.151.4.84 show()

```
void Fl_Widget::show ( ) [virtual]
```

Makes a widget visible.

An invisible widget never gets redrawn and does not get keyboard or mouse events, but can receive a few other events like FL_SHOW.

The [visible\(\)](#) method returns true if the widget is set to be visible. The [visible_r\(\)](#) method returns true if the widget and all of its parents are visible. A widget is only visible if [visible\(\)](#) is true on it *and all of its parents*.

Changing it will send FL_SHOW or FL_HIDE events to the widget. *Do not change it if the parent is not visible, as this will send false FL_SHOW or FL_HIDE events to the widget.* [redraw\(\)](#) is called if necessary on this or the parent.

See also

[hide\(\)](#), [visible\(\)](#), [visible_r\(\)](#)

Reimplemented in [Fl_Browser](#), [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Menu_Window](#), [Fl_Overlay_Window](#), [Fl_Single_Window](#), and [Fl_Window](#).

9.151.4.85 size()

```
void Fl_Widget::size (
    int W,
    int H ) [inline]
```

Changes the size of the widget.

size(W, H) is a shortcut for [resize\(x\(\), y\(\), W, H\)](#).

Parameters

in	<i>W,H</i>	new size
----	------------	----------

See also

[position\(int,int\)](#), [resize\(int,int,int,int\)](#)

9.151.4.86 take_focus()

```
int Fl_Widget::take_focus ( )
```

Gives the widget the keyboard focus.

Tries to make this widget be the [Fl::focus\(\)](#) widget, by first sending it an FL_FOCUS event, and if it returns non-zero, setting [Fl::focus\(\)](#) to this widget. You should use this method to assign the focus to a widget.

Returns

true if the widget accepted the focus.

9.151.4.87 takeevents()

```
unsigned int Fl_Widget::takeevents ( ) const [inline]
```

Returns if the widget is able to take events.
This is the same as ([active\(\)](#) && ![output\(\)](#) && [visible\(\)](#)) but is faster.

Return values

0	if the widget takes no events
---	-------------------------------

9.151.4.88 test_shortcut() [1/2]

```
int Fl_Widget::test_shortcut ( )
```

Returns true if the widget's label contains the entered '&x' shortcut.

This method must only be called in [handle\(\)](#) methods or callbacks after a keypress event (usually FL_KEYDOWN or FL_SHORTCUT). The widget's label is searched for a '&x' shortcut, and if found, this is compared with the entered key value.

[Fl::event_text\(\)](#) is used to get the entered key value.

Returns

true, if the entered text matches the widget's '&x' shortcut, false (0) otherwise.

Note

Internal use only.

9.151.4.89 test_shortcut() [2/2]

```
int Fl_Widget::test_shortcut (
    const char * t,
    const bool require_alt = false ) [static]
```

Returns true if the given text *t* contains the entered '&x' shortcut.

This method must only be called in [handle\(\)](#) methods or callbacks after a keypress event (usually FL_KEYDOWN or FL_SHORTCUT). The given text *t* (usually a widget's label or menu text) is searched for a '&x' shortcut, and if found, this is compared with the entered key value.

[Fl::event_text\(\)](#) is used to get the entered key value. [Fl::event_state\(\)](#) is used to get the Alt modifier, if *require_alt* is true.

Parameters

<i>t</i>	text or label to search for '&x' shortcut.
<i>require_alt</i>	if true: match only if Alt key is pressed.

Returns

true, if the entered text matches the '&x' shortcut in *t* false (0) otherwise.

Note

Internal use only.

9.151.4.90 tooltip() [1/2]

```
const char * Fl_Widget::tooltip ( ) const [inline]
```

Gets the current tooltip text.

Returns

a pointer to the tooltip text or NULL

See also

[tooltip\(const char*\)](#), [copy_tooltip\(const char*\)](#)

9.151.4.91 tooltip() [2/2]

```
void Fl_Widget::tooltip (
    const char * text )
```

Sets the current tooltip text.

Sets a string of text to display in a popup tooltip window when the user hovers the mouse over the widget. The string is *not* copied, so make sure any formatted string is stored in a static, global, or allocated buffer. If you want a copy made and managed for you, use the [copy_tooltip\(\)](#) method, which will manage the tooltip string automatically. If no tooltip is set, the tooltip of the parent is inherited. Setting a tooltip for a group and setting no tooltip for a child will show the group's tooltip instead. To avoid this behavior, you can set the child's tooltip to an empty string ("").

Parameters

in	<i>text</i>	New tooltip text (no copy is made)
----	-------------	------------------------------------

See also

[copy_tooltip\(const char*\)](#), [tooltip\(\)](#)

9.151.4.92 top_window()

```
Fl_Window * Fl_Widget::top_window ( ) const
```

Returns a pointer to the top-level window for the widget.

In other words, the 'window manager window' that contains this widget. This method differs from [window\(\)](#) in that it won't return sub-windows (if there are any).

Returns

the top-level window, or NULL if no top-level window is associated with this widget.

See also

[window\(\)](#)

9.151.4.93 top_window_offset()

```
Fl_Window * Fl_Widget::top_window_offset (
    int & xoff,
    int & yoff ) const
```

Finds the x/y offset of the current widget relative to the top-level window.

Parameters

out	<i>xoff,yoff</i>	Returns the x/y offset
-----	------------------	------------------------

Returns

the top-level window (or NULL for a widget that's not in any window)

9.151.4.94 type() [1/2]

```
uchar Fl_Widget::type ( ) const [inline]
```

Gets the widget type.

Returns the widget type value, which is used for Forms compatibility and to simulate RTTI.

Todo Explain "simulate RTTI" (currently only used to decide if a widget is a window, i.e. [type\(\)](#) >= FL_WINDOW ?). Is [type\(\)](#) really used in a way that ensures "Forms compatibility" ?

9.151.4.95 type() [2/2]

```
void Fl_Widget::type (
    uchar t ) [inline]
```

Sets the widget type.

This is used for Forms compatibility.

9.151.4.96 user_data() [1/2]

```
void * Fl_Widget::user_data ( ) const [inline]
```

Gets the user data for this widget.

Gets the current user data (void *) argument that is passed to the callback function.

Returns

user data as a pointer

9.151.4.97 user_data() [2/2]

```
void Fl_Widget::user_data (
    void * v ) [inline]
```

Sets the user data for this widget.

Sets the new user data (void *) argument that is passed to the callback function.

Parameters

in	v	new user data
----	---	---------------

9.151.4.98 visible()

```
unsigned int Fl_Widget::visible ( ) const [inline]
```

Returns whether a widget is visible.

Return values

0	if the widget is not drawn and hence invisible.
---	---

See also

[show\(\)](#), [hide\(\)](#), [visible_r\(\)](#)

9.151.4.99 visible_focus() [1/2]

```
unsigned int Fl_Widget::visible_focus ( ) [inline]
```

Checks whether this widget has a visible focus.

Return values

0	if this widget has no visible focus.
---	--------------------------------------

See also

[visible_focus\(int\)](#), [set_visible_focus\(\)](#), [clear_visible_focus\(\)](#)

9.151.4.100 visible_focus() [2/2]

```
void Fl_Widget::visible_focus (
    int v ) [inline]
```

Modifies keyboard focus navigation.

Parameters

in	v	set or clear visible focus
----	---	----------------------------

See also

[set_visible_focus\(\)](#), [clear_visible_focus\(\)](#), [visible_focus\(\)](#)

9.151.4.101 visible_r()

```
int Fl_Widget::visible_r ( ) const
```

Returns whether a widget and all its parents are visible.

Return values

0	if the widget or any of its parents are invisible.
---	--

See also

[show\(\)](#), [hide\(\)](#), [visible\(\)](#)

9.151.4.102 w() [1/2]

```
int Fl_Widget::w ( ) const [inline]
```

Gets the widget width.

Returns

the width of the widget in pixels.

9.151.4.103 w() [2/2]

```
void Fl_Widget::w (
    int v ) [inline], [protected]
```

Internal use only.

Use [position\(int,int\)](#), [size\(int,int\)](#) or [resize\(int,int,int,int\)](#) instead.

9.151.4.104 when() [1/2]

```
Fl_When Fl_Widget::when ( ) const [inline]
```

Returns the conditions under which the callback is called.

You can set the flags with [when\(uchar\)](#), the default value is FL_WHEN_RELEASE.

Returns

set of flags

See also

[when\(uchar\)](#)

9.151.4.105 when() [2/2]

```
void Fl_Widget::when (
    uchar i ) [inline]
```

Sets the flags used to decide when a callback is called.

This controls when callbacks are done. The following values are useful, the default value is `FL_WHEN_RELEASE`:

- 0: The callback is not done, but `changed()` is turned on.
- `FL_WHEN_CHANGED`: The callback is done each time the text is changed by the user.
- `FL_WHEN_RELEASE`: The callback will be done when this widget loses the focus, including when the window is unmapped. This is a useful value for text fields in a panel where doing the callback on every change is wasteful. However the callback will also happen if the mouse is moved out of the window, which means it should not do anything visible (like pop up an error message). You might do better setting this to zero, and scanning all the items for `changed()` when the OK button on a panel is pressed.
- `FL_WHEN_ENTER_KEY`: If the user types the Enter key, the entire text is selected, and the callback is done if the text has changed. Normally the Enter key will navigate to the next field (or insert a newline for a `Fl_Multiline_Input`) - this changes the behavior.
- `FL_WHEN_ENTER_KEY|FL_WHEN_NOT_CHANGED`: The Enter key will do the callback even if the text has not changed. Useful for command fields. `Fl_Widget::when()` is a set of bitflags used by subclasses of `Fl_Widget` to decide when to do the callback.

If the value is zero then the callback is never done. Other values are described in the individual widgets. This field is in the base class so that you can scan a panel and `do_callback()` on all the ones that don't do their own callbacks in response to an "OK" button.

Parameters

in	<i>i</i>	set of flags
----	----------	--------------

9.151.4.106 window()

```
Fl_Window * Fl_Widget::window ( ) const
```

Returns a pointer to the nearest parent window up the widget hierarchy.

This will return sub-windows if there are any, or the parent window if there's no sub-windows. If this widget IS the top-level window, NULL is returned.

Return values

NULL	if no window is associated with this widget.
------	--

Note

for an `Fl_Window` widget, this returns its *parent* window (if any), not *this* window.

See also

[top_window\(\)](#)

9.151.4.107 x() [1/2]

```
int Fl_Widget::x ( ) const [inline]
```

Gets the widget position in its window.

Returns

the x position relative to the window

9.151.4.108 x() [2/2]

```
void Fl_Widget::x (
    int v ) [inline], [protected]
```

Internal use only.

Use [position\(int,int\)](#), [size\(int,int\)](#) or [resize\(int,int,int,int\)](#) instead.

9.151.4.109 y() [1/2]

```
int Fl_Widget::y ( ) const [inline]
```

Gets the widget position in its window.

Returns

the y position relative to the window

9.151.4.110 y() [2/2]

```
void Fl_Widget::y (
    int v ) [inline], [protected]
```

Internal use only.

Use [position\(int,int\)](#), [size\(int,int\)](#) or [resize\(int,int,int,int\)](#) instead.

9.152 Fl_Widget_Tracker Class Reference

This class should be used to control safe widget deletion.

```
#include <Fl.H>
```

Public Member Functions

- int [deleted](#) ()

Returns 1, if the watched widget has been deleted.
- int [exists](#) ()

Returns 1, if the watched widget exists (has not been deleted).
- **Fl_Widget_Tracker** ([Fl_Widget](#) *wi)

The constructor adds a widget to the watch list.
- [Fl_Widget](#) * [widget](#) ()

Returns a pointer to the watched widget.
- [~Fl_Widget_Tracker](#) ()

The destructor removes a widget from the watch list.

9.152.1 Detailed Description

This class should be used to control safe widget deletion.

You can use an [Fl_Widget_Tracker](#) object to watch another widget, if you need to know, if this widget has been deleted during a callback.

This simplifies the use of the "safe widget deletion" methods [Fl::watch_widget_pointer\(\)](#) and [Fl::release_widget_pointer\(\)](#) and makes their use more reliable, because the destructor automatically releases the widget pointer from the widget watch list.

It is intended to be used as an automatic (local/stack) variable, such that the automatic destructor is called when the object's scope is left. This ensures that no stale widget pointers are left in the widget watch list (see example below).

You can also create [Fl_Widget_Tracker](#) objects with `new`, but then it is your responsibility to delete the object (and thus remove the widget pointer from the watch list) when it is not needed any more.

Example:

```
int MyClass::handle (int event) {

    if (...) {
        Fl_Widget_Tracker wp(this);           // watch myself
        do_callback();                       // call the callback

        if (wp.deleted()) return 1;         // exit, if deleted

        // Now we are sure that the widget has not been deleted.
        // It is safe to access the widget

        clear_changed();                    // access the widget
    }
}
```

9.152.2 Member Function Documentation

9.152.2.1 deleted()

```
int Fl_Widget_Tracker::deleted ( ) [inline]
```

Returns 1, if the watched widget has been deleted.

This is a convenience method. You can also use something like

```
if (wp.widget() == 0) // ...
```

where `wp` is an [Fl_Widget_Tracker](#) object.

9.152.2.2 exists()

```
int Fl_Widget_Tracker::exists ( ) [inline]
```

Returns 1, if the watched widget exists (has not been deleted).

This is a convenience method. You can also use something like

```
if (wp.widget() != 0) // ...
```

where `wp` is an [Fl_Widget_Tracker](#) object.

9.152.2.3 widget()

```
Fl_Widget * Fl_Widget_Tracker::widget ( ) [inline]
```

Returns a pointer to the watched widget.

This pointer is NULL, if the widget has been deleted.

The documentation for this class was generated from the following files:

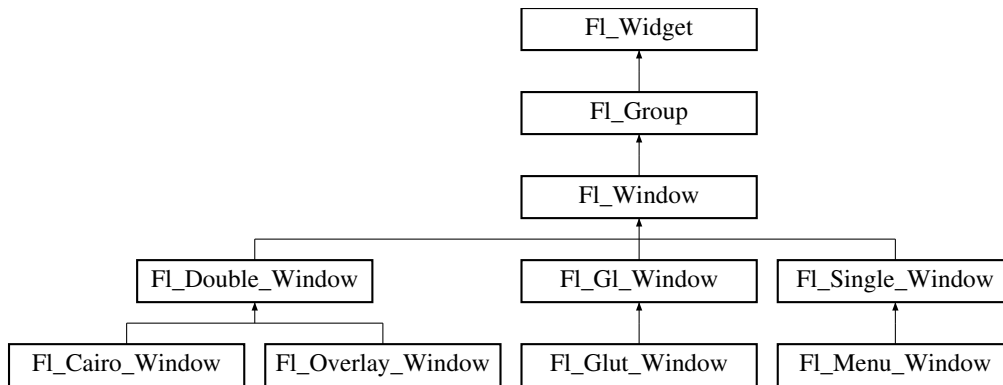

- [Fl.H](#)
- [Fl.cxx](#)

9.153 Fl_Window Class Reference

This widget produces an actual window.

```
#include <Fl_Window.H>
```

Inheritance diagram for [Fl_Window](#):

Classes

- struct [shape_data_type](#)
Data supporting a non-rectangular window shape.

Public Member Functions

- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- unsigned int [border](#) () const
See void [FI_Window::border\(int\)](#)
- void [border](#) (int b)
Sets whether or not the window manager border is around the window.
- void [clear_border](#) ()
Fast inline function to turn the window manager border off.
- void [clear_modal_states](#) ()
Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.
- void [copy_label](#) (const char *a)
Sets the window titlebar label to a copy of a character string.
- void [cursor](#) (const [FI_RGB_Image](#) *, int, int)
Changes the cursor for this window.
- void [cursor](#) ([FI_Cursor](#) c, [FI_Color](#), [FI_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void [cursor](#) ([FI_Cursor](#))
Changes the cursor for this window.
- int [decorated_h](#) ()
Returns the window height including any window title bar and any frame added by the window manager.
- int [decorated_w](#) ()
Returns the window width including any frame added by the window manager.
- void [default_cursor](#) ([FI_Cursor](#) c, [FI_Color](#), [FI_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void [default_cursor](#) ([FI_Cursor](#))
Sets the default window cursor.
- [FI_Window](#) (int w, int h, const char *title=0)
Creates a window from the given size and title.
- [FI_Window](#) (int x, int y, int w, int h, const char *title=0)
Creates a window from the given position, size and title.
- void [free_position](#) ()
Undoes the effect of a previous [resize\(\)](#) or [show\(\)](#) so that the next time [show\(\)](#) is called the window manager is free to position the window.

- void **fullscreen** ()
Makes the window completely fill one or more screens, without any window manager border visible.
- unsigned int **fullscreen_active** () const
Returns non zero if FULLSCREEN flag is set, 0 otherwise.
- void **fullscreen_off** ()
Turns off any side effects of [fullscreen\(\)](#)
- void **fullscreen_off** (int X, int Y, int W, int H)
Turns off any side effects of [fullscreen\(\)](#) and does `resize(x,y,w,h)`.
- void **fullscreen_screens** (int top, int bottom, int left, int right)
Sets which screens should be used when this window is in fullscreen mode.
- virtual int **handle** (int)
Handles the specified event.
- virtual void **hide** ()
Removes the window from the screen.
- void **hotspot** (const [FI_Widget](#) &p, int offscreen=0)
See void [FI_Window::hotspot\(int x, int y, int offscreen = 0\)](#)
- void **hotspot** (const [FI_Widget](#) *, int offscreen=0)
See void [FI_Window::hotspot\(int x, int y, int offscreen = 0\)](#)
- void **hotspot** (int x, int y, int offscreen=0)
Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.
- const void * **icon** () const
Gets the current icon window target dependent data.
- void **icon** (const [FI_RGB_Image](#) *)
Sets or resets a single window icon.
- void **icon** (const void *ic)
Sets the current icon window target dependent data.
- void **iconize** ()
Iconifies the window.
- const char * **iconlabel** () const
See void [FI_Window::iconlabel\(const char\)](#)*
- void **iconlabel** (const char *)
Sets the icon label.
- void **icons** (const [FI_RGB_Image](#) *[], int)
Sets the window icons.
- const char * **label** () const
See void [FI_Window::label\(const char\)](#)*
- void **label** (const char *)
Sets the window title bar label.
- void **label** (const char *label, const char *[iconlabel](#))
Sets the icon label.
- void **make_current** ()
Sets things up so that the drawing functions in `<FL/fl_draw.H>` will go into this window.
- unsigned int **menu_window** () const
Returns true if this window is a menu window.
- unsigned int **modal** () const
Returns true if this window is modal.
- unsigned int **non_modal** () const
Returns true if this window is modal or non-modal.

- unsigned int **override** () const
Returns non zero if FL_OVERRIDE flag is set, 0 otherwise.
- virtual void **resize** (int X, int Y, int W, int H)
Changes the size and position of the window.
- void **set_menu_window** ()
Marks the window as a menu window.
- void **set_modal** ()
A "modal" window, when [shown\(\)](#), will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).
- void **set_non_modal** ()
A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a [modal\(\)](#) one in that it remains on top, but it has no effect on event delivery.
- void **set_override** ()
Activates the flags NOBORDER|FL_OVERRIDE.
- void **set_tooltip_window** ()
Marks the window as a tooltip window.
- void **shape** (const [FL_Image](#) &b)
Set the window's shape with an [FL_Image](#).
- void **shape** (const [FL_Image](#) *img)
Assigns a non-rectangular shape to the window.
- virtual void **show** ()
Puts the window on the screen.
- void **show** (int argc, char **argv)
Puts the window on the screen and parses command-line arguments.
- int **shown** ()
Returns non-zero if [show\(\)](#) has been called (but not [hide\(\)](#)).
- void **size_range** (int minw, int minh, int maxw=0, int maxh=0, int dw=0, int dh=0, int aspect=0)
Sets the allowable range the user can resize this window to.
- unsigned int **tooltip_window** () const
Returns true if this window is a tooltip window.
- void **wait_for_expose** ()
Waits for the window to be displayed after calling [show\(\)](#).
- int **x_root** () const
Gets the x position of the window on the screen.
- const char * **xclass** () const
Returns the xclass for this window, or a default.
- void **xclass** (const char *c)
Sets the xclass for this window.
- int **y_root** () const
Gets the y position of the window on the screen.
- virtual **~FL_Window** ()
The destructor also deletes all the children.

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)

- void **add_resizable** ([FI_Widget](#) &o)
 - Adds a widget to the group and makes it the resizable widget.*
- [FI_Widget](#) *const * **array** () const
 - Returns a pointer to the array of children.*
- virtual [FI_Group](#) * **as_group** ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- void **begin** ()
 - Sets the current group so you can build the widget tree by just constructing the widgets.*
- [FI_Widget](#) * **child** (int n) const
 - Returns `array()[n]`.*
- int **children** () const
 - Returns how many child widgets the group has.*
- void **clear** ()
 - Deletes all child widgets from memory recursively.*
- unsigned int **clip_children** ()
 - Returns the current clipping mode.*
- void **clip_children** (int c)
 - Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- void **end** ()
 - Exactly the same as `current(this->parent())`.*
- int **find** (const [FI_Widget](#) &o) const
 - See `int FI_Group::find(const FI_Widget *w) const`.*
- int **find** (const [FI_Widget](#) *) const
 - Searches the child array for the widget and returns the index.*
- [FI_Group](#) (int, int, int, int, const char *s)
 - Creates a new [FI_Group](#) widget using the given position, size, and label string.*
- void **focus** ([FI_Widget](#) *W)
- void **forms_end** ()
 - This is for forms compatibility only.*
- void **init_sizes** ()
 - Resets the internal array of widget sizes and positions.*
- void **insert** ([FI_Widget](#) &, int i)
 - The widget is removed from its current group (if any) and then inserted into this group.*
- void **insert** ([FI_Widget](#) &o, [FI_Widget](#) *before)
 - This does `insert(w, find(before))`.*
- void **remove** ([FI_Widget](#) &)
 - Removes a widget from the group but does not delete it.*
- void **remove** ([FI_Widget](#) *o)
 - Removes the widget `o` from the group.*
- void **remove** (int index)
 - Removes the widget at `index` from the group but does not delete it.*
- [FI_Widget](#) * **resizable** () const
 - See `void FI_Group::resizable(FI_Widget *box)`*
- void **resizable** ([FI_Widget](#) &o)
 - See `void FI_Group::resizable(FI_Widget *box)`*
- void **resizable** ([FI_Widget](#) *o)
 - The resizable widget defines the resizing box for the group.*
- virtual [~FI_Group](#) ()
 - The destructor also deletes all the children.*

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window * as_gl_window** ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback0** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1** *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (**uchar** c=0)
Clears or sets the damage flags.
- void **clear_output** ()
Sets a widget to accept input.
- void **clear_visible** ()
Hides the widget.
- void **clear_visible_focus** ()
Disables keyboard focus navigation with this widget.
- **FI_Color color** () const
Gets the background color of the widget.
- void **color** (**FI_Color** bg)

- Sets the background color of the widget.*

 - void `color` (`FI_Color` bg, `FI_Color` sel)
- Sets the background and selection color of the widget.*

 - `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar` `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)

Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FI_Image` * `deimage` ()

Gets the image that is used as part of the widget label.
- const `FI_Image` * `deimage` () const
- void `deimage` (`FI_Image` &img)

Sets the image to use as part of the widget label.
- void `deimage` (`FI_Image` *img)

Sets the image to use as part of the widget label.
- void `do_callback` ()

Calls the widget callback.
- void `do_callback` (`FI_Widget` *o, long arg)

Calls the widget callback.
- void `do_callback` (`FI_Widget` *o, void *arg=0)

Calls the widget callback.
- void `draw_label` (int, int, int, int, `FI_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- `FI_Image` * `image` ()

Gets the image that is used as part of the widget label.
- const `FI_Image` * `image` () const
- void `image` (`FI_Image` &img)

Sets the image to use as part of the widget label.
- void `image` (`FI_Image` *img)

Sets the image to use as part of the widget label.
- int `inside` (const `FI_Widget` *wgt) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.

- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- `void labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fontsize labelsize () const`
Gets the font size in pixels.
- `void labelsize (FI_Fontsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FI_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `FI_Color selection_color () const`
Gets the selection color.
- `void selection_color (FI_Color a)`
Sets the selection color.
- `void set_active ()`
Marks the widget as active without sending events or changing focus.
- `void set_changed ()`
Marks the value of the widget as changed.
- `void set_output ()`
Sets a widget to output only.
- `void set_visible ()`
Makes the widget visible.
- `void set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- `void size (int W, int H)`

- Changes the size of the widget.*

 - int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.
- `Fl_Window` * `top_window` () const

Returns a pointer to the top-level window for the widget.
- `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const

Gets the widget type.
- void `type` (`uchar` t)

Sets the widget type.
- int `use_accents_menu` ()

Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * `user_data` () const

Gets the user data for this widget.
- void `user_data` (void *v)

Sets the user data for this widget.
- unsigned int `visible` () const

Returns whether a widget is visible.
- unsigned int `visible_focus` ()

Checks whether this widget has a visible focus.
- void `visible_focus` (int v)

Modifies keyboard focus navigation.
- int `visible_r` () const

Returns whether a widget and all its parents are visible.
- int `w` () const

Gets the widget width.
- `Fl_When` `when` () const

Returns the conditions under which the callback is called.
- void `when` (`uchar` i)

Sets the flags used to decide when a callback is called.
- `Fl_Window` * `window` () const

Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const

Gets the widget position in its window.
- int `y` () const

Gets the widget position in its window.
- virtual `~Fl_Widget` ()

Destroys the widget.

Static Public Member Functions

- static [FI_Window](#) * [current](#) ()
Returns the last window that was made current.
- static void [default_callback](#) ([FI_Window](#) *, void *v)
Back compatibility: Sets the default callback v for win to call on close event.
- static void [default_icon](#) (const [FI_RGB_Image](#) *)
Sets a single default window icon.
- static void [default_icons](#) (const [FI_RGB_Image](#) *[], int)
Sets the default window icons.
- static const char * [default_xclass](#) ()
Returns the default xclass.
- static void [default_xclass](#) (const char *)
Sets the default window xclass.

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *cb, void *d)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Member Functions

- virtual void [draw](#) ()
Draws the widget.
- virtual void [flush](#) ()
Forces the window to be drawn, this window is also made current and calls [draw\(\)](#).
- int [force_position](#) () const
Returns the internal state of the window's FORCE_POSITION flag.
- void [force_position](#) (int force)
Sets an internal flag that tells FLTK and the window manager to honor position requests.
- void [free_icons](#) ()
Deletes all icons previously attached to the window.

Protected Member Functions inherited from [FI_Group](#)

- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * [sizes](#) ()

Returns the internal array of widget sizes and positions.

- void **update_child** (FI_Widget &widget) const

Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Protected Attributes

- **shape_data_type** * **shape_data_**
non-null means the window has a non-rectangular shape

Static Protected Attributes

- static FI_Window * **current_**
Stores the last window that was made current.

Friends

- class **FI_X**

Additional Inherited Members

Protected Types inherited from Fl_Widget

- enum {
 - INACTIVE = 1<<0 , INVISIBLE = 1<<1 , OUTPUT = 1<<2 , NOBORDER = 1<<3 ,

 - USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 , USERFLAG1 = 1<<31 }

flags possible values enumeration.

9.153.1 Detailed Description

This widget produces an actual window.

This can either be a main window, with a border and title and all the window management controls, or a "subwindow" inside a window. This is controlled by whether or not the window has a [parent\(\)](#).

Once you create a window, you usually add children [Fl_Widget](#)'s to it by using `window->add(child)` for each new widget. See [Fl_Group](#) for more information on how to add and remove children.

There are several subclasses of [Fl_Window](#) that provide double-buffering, overlay, menu, and OpenGL support.

The window's callback is done if the user tries to close a window using the window manager and [Fl::modal\(\)](#) is zero or equal to the window. [Fl_Window](#) has a default callback that calls [Fl_Window::hide\(\)](#).

9.153.2 Constructor & Destructor Documentation

9.153.2.1 Fl_Window() [1/2]

```
Fl_Window::Fl_Window (
    int w,
    int h,
    const char * title = 0 )
```

Creates a window from the given size and title.

If [Fl_Group::current\(\)](#) is not NULL, the window is created as a subwindow of the parent window.

The (w,h) form of the constructor creates a top-level window and asks the window manager to position the window.

The (x,y,w,h) form of the constructor either creates a subwindow or a top-level window at the specified location (x,y), subject to window manager configuration. If you do not specify the position of the window, the window manager will pick a place to show the window or allow the user to pick a location. Use [position\(x,y\)](#) or [hotspot\(\)](#) before calling [show\(\)](#) to request a position on the screen. See [Fl_Window::resize\(\)](#) for some more details on positioning windows. Top-level windows initially have [visible\(\)](#) set to 0 and [parent\(\)](#) set to NULL. Subwindows initially have [visible\(\)](#) set to 1 and [parent\(\)](#) set to the parent window pointer.

[Fl_Widget::box\(\)](#) defaults to FL_FLAT_BOX. If you plan to completely fill the window with children widgets you should change this to FL_NO_BOX. If you turn the window border off you may want to change this to FL_UP_BOX.

See also

[Fl_Window\(int x, int y, int w, int h, const char* title\)](#)

9.153.2.2 Fl_Window() [2/2]

```
Fl_Window::Fl_Window (
    int x,
    int y,
    int w,
    int h,
    const char * title = 0 )
```

Creates a window from the given position, size and title.

See also

[Fl_Window\(int w, int h, const char *title\)](#)

9.153.2.3 ~Fl_Window()

```
Fl_Window::~Fl_Window ( ) [virtual]
```

The destructor *also deletes all the children*.

This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the [Fl_Window](#) and all of its children can be automatic (local) variables, but you must declare the [Fl_Window](#) *first* so that it is destroyed last.

9.153.3 Member Function Documentation

9.153.3.1 as_window()

```
virtual Fl_Window * Fl_Window::as_window ( ) [inline], [virtual]
```

Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).

Use this method if you have a widget (pointer) and need to know whether this widget is derived from [Fl_Window](#). If it returns non-NULL, then the widget in question is derived from [Fl_Window](#), and you can use the returned pointer to access its children or other [Fl_Window](#)-specific methods.

Return values

NULL	if this widget is not derived from Fl_Window .
------	--

Note

This method is provided to avoid `dynamic_cast`.

See also

[Fl_Widget::as_group\(\)](#), [Fl_Widget::as_gl_window\(\)](#)

Reimplemented from [Fl_Widget](#).

9.153.3.2 border()

```
void Fl_Window::border (
    int b )
```

Sets whether or not the window manager border is around the window.

The default value is true. void [border\(int\)](#) can be used to turn the border on and off. *Under most X window managers this does not work after [show\(\)](#) has been called, although SGI's 4DWM does work.*

9.153.3.3 clear_border()

```
void Fl_Window::clear_border ( ) [inline]
```

Fast inline function to turn the window manager border off.

It only works before [show\(\)](#) is called.

9.153.3.4 clear_modal_states()

```
void Fl_Window::clear_modal_states ( ) [inline]
```

Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.

Note that there are *three* states for a window: modal, non-modal, and normal.

You can not change the "modality" of a window whilst it is shown, so it is necessary to first [hide\(\)](#) the window, change its "modality" as required, then re-show the window for the new state to take effect.

This method can also be used to change a "modal" window into a "non-modal" one. On several supported platforms, the "modal" state over-rides the "non-modal" state, so the "modal" state must be cleared before the window can be set into the "non-modal" state. In general, the following sequence should work:

```
win->hide();
win->clear_modal_states();
//Set win to new state as desired, or leave "normal", e.g...
win->set_non_modal();
win->show();
```

Note

Under some window managers, the sequence of hiding the window and changing its modality will often cause it to be re-displayed at a different position when it is subsequently shown. This is an irritating feature but appears to be unavoidable at present. As a result we would advise to use this method only when absolutely necessary.

See also

void [set_modal\(\)](#), void [set_non_modal\(\)](#)

9.153.3.5 current()

```
Fl_Window * Fl_Window::current ( ) [static]
```

Returns the last window that was made current.

See also

[Fl_Window::make_current\(\)](#)

9.153.3.6 cursor() [1/3]

```
void Fl_Window::cursor (
    const Fl_RGB_Image * image,
    int hotx,
    int hoty )
```

Changes the cursor for this window.

This always calls the system, if you are changing the cursor a lot you may want to keep track of how you set it in a static variable and call this only if the new cursor is different.

The default cursor will be used if the provided image cannot be used as a cursor.

See also

[cursor\(Fl_Cursor\)](#), [default_cursor\(\)](#)

9.153.3.7 cursor() [2/3]

```
void Fl_Window::cursor (
    Fl_Cursor c,
    Fl_Color ,
    Fl_Color = FL_WHITE )
```

For back compatibility only.

Same as [Fl_Window::cursor\(Fl_Cursor\)](#)

9.153.3.8 cursor() [3/3]

```
void Fl_Window::cursor (
    Fl_Cursor c )
```

Changes the cursor for this window.

This always calls the system, if you are changing the cursor a lot you may want to keep track of how you set it in a static variable and call this only if the new cursor is different.

The type `Fl_Cursor` is an enumeration defined in [<FL/Enumerations.H>](#).

See also

[cursor\(const FI_RGB_Image*, int, int\), default_cursor\(\)](#)

9.153.3.9 decorated_h()

```
int Fl_Window::decorated_h ( )
```

Returns the window height including any window title bar and any frame added by the window manager. Same as [h\(\)](#) if applied to a subwindow.

9.153.3.10 decorated_w()

```
int Fl_Window::decorated_w ( )
```

Returns the window width including any frame added by the window manager. Same as [w\(\)](#) if applied to a subwindow.

9.153.3.11 default_cursor() [1/2]

```
void Fl_Window::default_cursor (
    Fl_Cursor c,
    Fl_Color ,
    Fl_Color = FL_WHITE )
```

For back compatibility only.

same as [Fl_Window::default_cursor\(Fl_Cursor\)](#)

9.153.3.12 default_cursor() [2/2]

```
void Fl_Window::default_cursor (
    Fl_Cursor c )
```

Sets the default window cursor.

This is the cursor that will be used after the mouse pointer leaves a widget with a custom cursor set.

See also

[cursor\(const FI_RGB_Image*, int, int\), default_cursor\(\)](#)

9.153.3.13 default_icon()

```
void Fl_Window::default_icon (
    const Fl_RGB_Image * icon ) [static]
```

Sets a single default window icon.

If *icon* is NULL the current default icons are removed.

Parameters

in	<i>icon</i>	default icon for all windows subsequently created or NULL
----	-------------	---

See also

[Fl_Window::default_icons\(const FI_RGB_Image *\[\], int\)](#)

[Fl_Window::icon\(const FI_RGB_Image *\)](#)

[Fl_Window::icons\(const FI_RGB_Image *\[\], int\)](#)

9.153.3.14 default_icons()

```
void Fl_Window::default_icons (
    const Fl_RGB_Image * icons[],
    int count ) [static]
```

Sets the default window icons.

The default icons are used for all windows that don't have their own icons set before [show\(\)](#) is called. You can change the default icons whenever you want, but this only affects windows that are created (and shown) after this call.

The given images in `icons` are copied. You can use a local variable or free the images immediately after this call.

Parameters

in	<code>icons</code>	default icons for all windows subsequently created
in	<code>count</code>	number of images in <code>icons</code> . Set to 0 to remove the current default icons

See also

[Fl_Window::default_icon\(const Fl_RGB_Image *\)](#)

[Fl_Window::icon\(const Fl_RGB_Image *\)](#)

[Fl_Window::icons\(const Fl_RGB_Image *\[\], int\)](#)

9.153.3.15 default_xclass() [1/2]

```
const char * Fl_Window::default_xclass ( ) [static]
```

Returns the default xclass.

See also

[Fl_Window::default_xclass\(const char *\)](#)

9.153.3.16 default_xclass() [2/2]

```
void Fl_Window::default_xclass (
    const char * xc ) [static]
```

Sets the default window xclass.

The default xclass is used for all windows that don't have their own xclass set before [show\(\)](#) is called. You can change the default xclass whenever you want, but this only affects windows that are created (and shown) after this call.

The given string `xc` is copied. You can use a local variable or free the string immediately after this call.

If you don't call this, the default xclass for all windows will be "FLTK". You can reset the default xclass by specifying NULL for `xc`.

If you call [Fl_Window::xclass\(const char *\)](#) for any window, then this also sets the default xclass, unless it has been set before.

Parameters

in	<code>xc</code>	default xclass for all windows subsequently created
----	-----------------	---

See also

[Fl_Window::xclass\(const char *\)](#)

9.153.3.17 draw()

```
void Fl_Window::draw ( ) [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scroll;           // scroll is an embedded Fl_Scrollbar
s->draw();                       // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Cairo_Window](#), [Fl_Gl_Window](#), and [Fl_Glut_Window](#).

9.153.3.18 flush()

```
void Fl_Window::flush ( ) [protected], [virtual]
```

Forces the window to be drawn, this window is also made current and calls [draw\(\)](#).

Reimplemented in [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Menu_Window](#), [Fl_Overlay_Window](#), and [Fl_Single_Window](#).

9.153.3.19 force_position() [1/2]

```
int Fl_Window::force_position ( ) const [inline], [protected]
```

Returns the internal state of the window's FORCE_POSITION flag.

Return values

1	if flag is set
0	otherwise

See also

[force_position\(int\)](#)

9.153.3.20 force_position() [2/2]

```
void Fl_Window::force_position (
    int force ) [inline], [protected]
```

Sets an internal flag that tells FLTK and the window manager to honor position requests.

This is used internally and should not be needed by user code.

Parameters

in	<i>force</i>	1 to set the FORCE_POSITION flag, 0 to clear it
----	--------------	---

9.153.3.21 free_icons()

```
void Fl_Window::free_icons ( ) [protected]
```

Deletes all icons previously attached to the window.

See also

[Fl_Window::icons\(const Fl_RGB_Image *icons\[\], int count\)](#)

9.153.3.22 free_position()

```
void Fl_Window::free_position ( ) [inline]
```

Undoes the effect of a previous [resize\(\)](#) or [show\(\)](#) so that the next time [show\(\)](#) is called the window manager is free to position the window.

This is for Forms compatibility only.

Deprecated please use [force_position\(0\)](#) instead

9.153.3.23 fullscreen()

```
void Fl_Window::fullscreen ( )
```

Makes the window completely fill one or more screens, without any window manager border visible.

You must use [fullscreen_off\(\)](#) to undo this.

Note

On some platforms, this can result in the keyboard being grabbed. The window may also be recreated, meaning [hide\(\)](#) and [show\(\)](#) will be called.

See also

void [Fl_Window::fullscreen_screens\(\)](#)

9.153.3.24 fullscreen_screens()

```
void Fl_Window::fullscreen_screens (
    int top,
    int bottom,
    int left,
    int right )
```

Sets which screens should be used when this window is in fullscreen mode.

The window will be resized to the top of the screen with index `top`, the bottom of the screen with index `bottom`, etc.

If this method is never called, or if any argument is < 0 , then the window will be resized to fill the screen it is currently on.

See also

void [Fl_Window::fullscreen\(\)](#)

9.153.3.25 handle()

```
int Fl_Window::handle (
    int event ) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee `retval`.

Parameters

<i>in</i>	<i>event</i>	the kind of event received
-----------	--------------	----------------------------

Return values

<i>0</i>	if the event was not used or understood
<i>1</i>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Gl_Window](#), and [Fl_Glut_Window](#).

9.153.3.26 hide()

```
void Fl_Window::hide ( ) [virtual]
```

Removes the window from the screen.

If the window is already hidden or has not been shown then this does nothing and is harmless.

Reimplemented from [Fl_Widget](#).

Reimplemented in [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Menu_Window](#), and [Fl_Overlay_Window](#).

9.153.3.27 hotspot()

```
void Fl_Window::hotspot (
    int x,
    int y,
    int offscreen = 0 )
```

Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.

If the optional offscreen parameter is non-zero, then the window is allowed to extend off the screen (this does not work with some X window managers).

See also

[position\(\)](#)

9.153.3.28 icon() [1/3]

```
const void * Fl_Window::icon ( ) const
```

Gets the current icon window target dependent data.

Deprecated in 1.3.3

9.153.3.29 icon() [2/3]

```
void Fl_Window::icon (
    const Fl_RGB_Image * icon )
```

Sets or resets a single window icon.

A window icon *can* be changed while the window is shown, but this *may* be platform and/or window manager dependent. To be sure that the window displays the correct window icon you should always set the icon before the window is shown.

If a window icon has not been set for a particular window, then the default window icon (see links below) or the system default icon will be used.

Parameters

in	<i>icon</i>	icon for this window, NULL to reset window icon.
----	-------------	--

See also

[Fl_Window::default_icon\(const Fl_RGB_Image *\)](#)

[Fl_Window::default_icons\(const Fl_RGB_Image *\[\], int\)](#)

[Fl_Window::icons\(const Fl_RGB_Image *\[\], int\)](#)

9.153.3.30 icon() [3/3]

```
void Fl_Window::icon (
    const void * ic )
```

Sets the current icon window target dependent data.

Deprecated in 1.3.3

9.153.3.31 iconize()

```
void Fl_Window::iconize ( )
```

Iconifies the window.

If you call this when [shown\(\)](#) is false it will [show\(\)](#) it as an icon. If the window is already iconified this does nothing. Call [show\(\)](#) to restore the window.

When a window is iconified/restored (either by these calls or by the user) the [handle\(\)](#) method is called with FL_HIDE and FL_SHOW events and [visible\(\)](#) is turned on and off.

There is no way to control what is drawn in the icon except with the string passed to [Fl_Window::xclass\(\)](#). You should not rely on window managers displaying the icons.

9.153.3.32 icons()

```
void Fl_Window::icons (
    const Fl_RGB_Image * icons[],
    int count )
```

Sets the window icons.

You may set multiple window icons with different sizes. Dependent on the platform and system settings the best (or the first) icon will be chosen.

The given images in `icons` are copied. You can use a local variable or free the images immediately after this call. If `count` is zero, current icons are removed. If `count` is greater than zero (must not be negative), then `icons[]` must contain at least `count` valid image pointers (not NULL). Otherwise the behavior is undefined.

Parameters

in	<i>icons</i>	icons for this window
in	<i>count</i>	number of images in <i>icons</i> . Set to 0 to remove the current icons

9.153.3.33 make_current()

```
void Fl_Window::make_current ( )
```

Sets things up so that the drawing functions in [<FL/fl_draw.H>](#) will go into this window.

This is useful for incremental update of windows, such as in an idle callback, which will make your program behave much better if it draws a slow graphic. **Danger: incremental update is very hard to debug and maintain!**

This method only works for the [Fl_Window](#) and [Fl_Gl_Window](#) derived classes.

9.153.3.34 modal()

```
unsigned int Fl_Window::modal ( ) const [inline]
```

Returns true if this window is modal.

9.153.3.35 resize()

```
virtual void Fl_Window::resize (
    int X,
    int Y,
    int W,
    int H ) [virtual]
```

Changes the size and position of the window.

If `shown()` is true, these changes are communicated to the window server (which may refuse that size and cause a further resize). If `shown()` is false, the size and position are used when `show()` is called. See [FI_Group](#) for the effect of resizing on the child widgets.

You can also call the [FI_Widget](#) methods `size(x,y)` and `position(w,h)`, which are inline wrappers for this virtual function.

A top-level window can not force, but merely suggest a position and size to the operating system. The window manager may not be willing or able to display a window at the desired position or with the given dimensions. It is up to the application developer to verify window parameters after the resize request.

Reimplemented from [FI_Group](#).

Reimplemented in [FI_Double_Window](#), [FI_GI_Window](#), and [FI_Overlay_Window](#).

9.153.3.36 `set_menu_window()`

```
void Fl_Window::set_menu_window ( ) [inline]
```

Marks the window as a menu window.

This is intended for internal use, but it can also be used if you write your own menu handling. However, this is not recommended.

This flag is used for correct "parenting" of windows in communication with the windowing system. Modern X window managers can use different flags to distinguish menu and tooltip windows from normal windows.

This must be called before the window is shown and cannot be changed later.

9.153.3.37 `set_modal()`

```
void Fl_Window::set_modal ( ) [inline]
```

A "modal" window, when `shown()`, will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).

Several modal windows may be shown at once, in which case only the last one shown gets events. You can see which window (if any) is modal by calling [Fl::modal\(\)](#).

9.153.3.38 `set_non_modal()`

```
void Fl_Window::set_non_modal ( ) [inline]
```

A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a [modal\(\)](#) one in that it remains on top, but it has no effect on event delivery.

There are *three* states for a window: modal, non-modal, and normal.

9.153.3.39 `set_tooltip_window()`

```
void Fl_Window::set_tooltip_window ( ) [inline]
```

Marks the window as a tooltip window.

This is intended for internal use, but it can also be used if you write your own tooltip handling. However, this is not recommended.

This flag is used for correct "parenting" of windows in communication with the windowing system. Modern X window managers can use different flags to distinguish menu and tooltip windows from normal windows.

This must be called before the window is shown and cannot be changed later.

Note

Since [Fl_Tooltip_Window](#) is derived from [Fl_Menu_Window](#), this also **clears** the [menu_window\(\)](#) state.

9.153.3.40 `shape()` [1/2]

```
void Fl_Window::shape (
    const Fl_Image & b ) [inline]
```

Set the window's shape with an [Fl_Image](#).

See also

```
void shape\(const Fl\_Image\* img\)
```

9.153.3.41 shape() [2/2]

```
void Fl_Window::shape (
    const Fl_Image * img )
```

Assigns a non-rectangular shape to the window.

This function gives an arbitrary shape (not just a rectangular region) to an [Fl_Window](#). An [Fl_Image](#) of any dimension can be used as mask; it is rescaled to the window's dimension as needed.

The layout and widgets inside are unaware of the mask shape, and most will act as though the window's rectangular bounding box is available to them. It is up to you to make sure they adhere to the bounds of their masking shape.

The `img` argument can be an [Fl_Bitmap](#), [Fl_Pixmap](#), [Fl_RGB_Image](#) or [Fl_Shared_Image](#):

- With [Fl_Bitmap](#) or [Fl_Pixmap](#), the shaped window covers the image part where bitmap bits equal one, or where the pixmap is not fully transparent.
- With an [Fl_RGB_Image](#) with an alpha channel (depths 2 or 4), the shaped window covers the image part that is not fully transparent.
- With an [Fl_RGB_Image](#) of depth 1 (gray-scale) or 3 (RGB), the shaped window covers the non-black image part.
- With an [Fl_Shared_Image](#), the shape is determined by rules above applied to the underlying image. The shared image should not have been scaled through [Fl_Shared_Image::scale\(\)](#).

Platform details:

- On the unix/linux platform, the SHAPE extension of the X server is required. This function does control the shape of [Fl_Gl_Window](#) instances.
- On the MSWindows platform, this function does nothing with class [Fl_Gl_Window](#).
- On the Mac platform, OS version 10.4 or above is required. An 8-bit shape-mask is used when `img` is an [Fl_RGB_Image](#): with depths 2 or 4, the image alpha channel becomes the shape mask such that areas with `alpha = 0` are out of the shaped window; with depths 1 or 3, white and black are in and out of the shaped window, respectively, and other colors give intermediate masking scores. This function does nothing with class [Fl_Gl_Window](#).

The window borders and caption created by the window system are turned off by default. They can be re-enabled by calling `Fl_Window::border(1)`.

A usage example is found at `example/shapedwindow.cxx`.

Version

1.3.3 (and requires compilation with `FLTK_ABI_VERSION >= 10303`)

9.153.3.42 show() [1/2]

```
virtual void Fl_Window::show ( ) [virtual]
```

Puts the window on the screen.

Usually (on X) this has the side effect of opening the display.

If the window is already shown then it is restored and raised to the top. This is really convenient because your program can call `show()` at any time, even if the window is already up. It also means that `show()` serves the purpose of `raise()` in other toolkits.

`Fl_Window::show(int argc, char **argv)` is used for top-level windows and allows standard arguments to be parsed from the command-line.

Note

For some obscure reasons `Fl_Window::show()` resets the current group by calling `Fl_Group::current(0)`. The comments in the code say "get rid of very common user bug: forgot end()". Although this is true it may have unwanted side effects if you `show()` an unrelated window (maybe for an error message or warning) while building a window or any other group widget.

Todo Check if we can remove resetting the current group in a later FLTK version (after 1.3.x). This may break "already broken" programs though if they rely on this "feature".

See also

[Fl_Window::show\(int argc, char **argv\)](#)

Reimplemented from [Fl_Widget](#).

Reimplemented in [Fl_Double_Window](#), [Fl_Gl_Window](#), [Fl_Menu_Window](#), [Fl_Overlay_Window](#), and [Fl_Single_Window](#).

9.153.3.43 show() [2/2]

```
void Fl_Window::show (
    int argc,
    char ** argv )
```

Puts the window on the screen and parses command-line arguments.

Usually (on X) this has the side effect of opening the display.

This form should be used for top-level windows, at least for the first (main) window. It allows standard arguments to be parsed from the command-line. You can use `argc` and `argv` from `main(int argc, char **argv)` for this call.

The first call also sets up some system-specific internal variables like the system colors.

Todo explain which system parameters are set up.

Parameters

<code>argc</code>	command-line argument count, usually from <code>main()</code>
<code>argv</code>	command-line argument vector, usually from <code>main()</code>

See also

virtual void [Fl_Window::show\(\)](#)

9.153.3.44 shown()

```
int Fl_Window::shown ( ) [inline]
```

Returns non-zero if [show\(\)](#) has been called (but not [hide\(\)](#)).

You can tell if a window is iconified with `(w->shown() && !w->visible())`.

9.153.3.45 size_range()

```
void Fl_Window::size_range (
    int minw,
    int minh,
    int maxw = 0,
    int maxh = 0,
    int dw = 0,
    int dh = 0,
    int aspect = 0 ) [inline]
```

Sets the allowable range the user can resize this window to.

This only works for top-level windows.

- `minw` and `minh` are the smallest the window can be. Either value must be greater than 0.
- `maxw` and `maxh` are the largest the window can be. If either is *equal* to the minimum then you cannot resize in that direction. If either is zero then FLTK picks a maximum size in that direction such that the window will fill the screen.
- `dw` and `dh` are size increments. The window will be constrained to widths of `minw + N * dw`, where `N` is any non-negative integer. If these are less or equal to 1 they are ignored (this is ignored on WIN32).
- `aspect` is a flag that indicates that the window should preserve its aspect ratio. This only works if both the maximum and minimum have the same aspect ratio (ignored on WIN32 and by many X window managers).

If this function is not called, FLTK tries to figure out the range from the setting of [resizable\(\)](#):

- If [resizable\(\)](#) is NULL (this is the default) then the window cannot be resized and the resize border and max-size control will not be displayed for the window.
- If either dimension of [resizable\(\)](#) is less than 100, then that is considered the minimum size. Otherwise the [resizable\(\)](#) has a minimum size of 100.
- If either dimension of [resizable\(\)](#) is zero, then that is also the maximum size (so the window cannot resize in that direction).

It is undefined what happens if the current size does not fit in the constraints passed to [size_range\(\)](#).

9.153.3.46 wait_for_expose()

```
void Fl_Window::wait_for_expose ( )
```

Waits for the window to be displayed after calling [show\(\)](#).

[Fl_Window::show\(\)](#) is not guaranteed to show and draw the window on all platforms immediately. Instead this is done in the background; particularly on X11 it will take a few messages (client server roundtrips) to display the window. Usually this small delay doesn't matter, but in some cases you may want to have the window instantiated and displayed synchronously.

Currently (as of FLTK 1.3.4) this method has an effect on X11 and Mac OS. On Windows, [show\(\)](#) is always synchronous. The effect of [show\(\)](#) varies with versions of Mac OS X: early versions have the window appear on the screen when [show\(\)](#) returns, later versions don't. If you want to write portable code and need this synchronous [show\(\)](#) feature, add `win->wait_for_expose()` on all platforms, and FLTK will just do the right thing.

This method can be used for displaying splash screens before calling [Fl::run\(\)](#) or for having exact control over which window has the focus after calling [show\(\)](#).

If the window is not [shown\(\)](#), this method does nothing.

Note

Depending on the platform and window manager [wait_for_expose\(\)](#) may not guarantee that the window is fully drawn when it is called. Under X11 it may only make sure that the window is **mapped**, i.e. the internal (OS dependent) window object was created (and maybe shown on the desktop as an empty frame or something like that). You may need to call [Fl::flush\(\)](#) after [wait_for_expose\(\)](#) to make sure the window and all its widgets are drawn and thus visible.

FLTK does the best it can do to make sure that all widgets get drawn if you call [wait_for_expose\(\)](#) and [Fl::flush\(\)](#). However, dependent on the window manager it can not be guaranteed that this does always happen synchronously. The only guaranteed behavior that all widgets are eventually drawn is if the FLTK event loop is run continuously, for instance with [Fl::run\(\)](#).

See also

virtual void [Fl_Window::show\(\)](#)

Example code for displaying a window before calling [Fl::run\(\)](#)

```
Fl_Double_Window win = new Fl_Double_Window(...);

// do more window initialization here ...

win->show();           // show window
win->wait_for_expose(); // wait, until displayed
Fl::flush();          // make sure everything gets drawn

// do more initialization work that needs some time here ...

Fl::run();             // start FLTK event loop
```

Note that the window will not be responsive until the event loop is started with [Fl::run\(\)](#).

9.153.3.47 xclass() [1/2]

```
const char * Fl_Window::xclass ( ) const
```

Returns the xclass for this window, or a default.

See also

[Fl_Window::default_xclass\(const char *\)](#)

[Fl_Window::xclass\(const char *\)](#)

9.153.3.48 xclass() [2/2]

```
void Fl_Window::xclass (
    const char * xc )
```

Sets the xclass for this window.

A string used to tell the system what type of window this is. Mostly this identifies the picture to draw in the icon. This only works if called *before* calling [show\(\)](#).

Under X, this is turned into a XA_WM_CLASS pair by truncating at the first non-alphanumeric character and capitalizing the first character, and the second one if the first is 'x'. Thus "foo" turns into "foo, Foo", and "xprog.1" turns into "xprog, XProg".

Under Microsoft Windows, this string is used as the name of the WNDCLASS structure, though it is not clear if this can have any visible effect.

Since

FLTK 1.3 the passed string is copied. You can use a local variable or free the string immediately after this call. Note that FLTK 1.1 stores the *pointer* without copying the string.

If the default xclass has not yet been set, this also sets the default xclass for all windows created subsequently.

9.154 Fl_Wizard Class Reference

This widget is based off the [Fl_Tabs](#) widget, but instead of displaying tabs it only changes "tabs" under program control.

```
#include <Fl_Wizard.H>
```

Inheritance diagram for Fl_Wizard:

Public Member Functions

- [FI_Wizard](#) (int, int, int, int, const char **=0*)
The constructor creates the [FI_Wizard](#) widget at the specified position and size.
- void [next](#) ()
This method shows the next child of the wizard.
- void [prev](#) ()
Shows the previous child.
- [FI_Widget](#) * [value](#) ()
Gets the current visible child widget.
- void [value](#) ([FI_Widget](#) *)
Sets the child widget that is visible.

Public Member Functions inherited from [FI_Group](#)

- [FI_Widget](#) *& [_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FI_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FI_Widget](#) *o)
See void [FI_Group::add\(FI_Widget &w\)](#)
- void [add_resizable](#) ([FI_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FI_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FI_Widget](#) * [child](#) (int n) const
Returns [array\(\)\[n\]](#).
- int [children](#) () const
Returns how many child widgets the group has.
- void [clear](#) ()
Deletes all child widgets from memory recursively.
- unsigned int [clip_children](#) ()
Returns the current clipping mode.
- void [clip_children](#) (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- void [end](#) ()
Exactly the same as [current\(this->parent\(\)\)](#).
- int [find](#) (const [FI_Widget](#) &o) const
*See int [FI_Group::find\(const FI_Widget *w\) const](#).*
- int [find](#) (const [FI_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FI_Group](#) (int, int, int, int, const char **=0*)
Creates a new [FI_Group](#) widget using the given position, size, and label string.
- void [focus](#) ([FI_Widget](#) *W)
- void [forms_end](#) ()
This is for forms compatibility only.
- int [handle](#) (int)
Handles the specified event.

- void `init_sizes` ()
Resets the internal array of widget sizes and positions.
- void `insert` (`FI_Widget` &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void `insert` (`FI_Widget` &o, `FI_Widget` *before)
This does `insert(w, find(before))`.
- void `remove` (`FI_Widget` &)
Removes a widget from the group but does not delete it.
- void `remove` (`FI_Widget` *o)
Removes the widget o from the group.
- void `remove` (int index)
Removes the widget at index from the group but does not delete it.
- `FI_Widget` * `resizable` () const
*See void `FI_Group::resizable(FI_Widget *box)`*
- void `resizable` (`FI_Widget` &o)
*See void `FI_Group::resizable(FI_Widget *box)`*
- void `resizable` (`FI_Widget` *o)
The resizable widget defines the resizing box for the group.
- void `resize` (int, int, int, int)
Resizes the `FI_Group` widget and all of its children.
- virtual `~FI_Group` ()
The destructor also deletes all the children.

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
Activates the widget.
- unsigned int `active` () const
Returns whether the widget is active.
- int `active_r` () const
Returns whether the widget and all of its parents are active.
- `FI_Align` `align` () const
Gets the label alignment.
- void `align` (`FI_Align` alignment)
Sets the label alignment.
- long `argument` () const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_Gl_Window` * `as_gl_window` ()
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
- virtual `FI_Window` * `as_window` ()
Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- `FI_Boxtype` `box` () const
Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)
Sets the box type for the widget.
- `FI_Callback_p` `callback` () const
Gets the current callback function for the widget.

- void `callback` (`FI_Callback *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback *cb`, `void *p`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback0 *cb`)
Sets the current callback function for the widget.
- void `callback` (`FI_Callback1 *cb`, `long p=0`)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar c=0`)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FI_Color color` () const
Gets the background color of the widget.
- void `color` (`FI_Color bg`)
Sets the background color of the widget.
- void `color` (`FI_Color bg`, `FI_Color sel`)
Sets the background and selection color of the widget.
- `FI_Color color2` () const
For back compatibility only.
- void `color2` (`unsigned a`)
For back compatibility only.
- int `contains` (`const FI_Widget *w`) const
Checks if w is a child of this widget.
- void `copy_label` (`const char *new_label`)
Sets the current label.
- void `copy_tooltip` (`const char *text`)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar c`)
Sets the damage bits for the widget.
- void `damage` (`uchar c`, `int x`, `int y`, `int w`, `int h`)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (`int`, `int`, `int`, `int`)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FI_Image * deimage` ()
Gets the image that is used as part of the widget label.
- const `FI_Image * deimage` () const

- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- void `do_callback` ()
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, long arg)
Calls the widget callback.
- void `do_callback` (`FL_Widget` *o, void *arg=0)
Calls the widget callback.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label.
- const `FL_Image` * `image` () const
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fontsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.

- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FI_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FI_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- virtual void `show` ()
Makes a widget visible.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FI_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FI_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar t`)
Sets the widget type.
- int `use_accents_menu` ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * `user_data` () const

- Gets the user data for this widget.*

 - void `user_data` (void *v)
- Sets the user data for this widget.*

 - unsigned int `visible` () const
- Returns whether a widget is visible.*

 - unsigned int `visible_focus` ()
- Checks whether this widget has a visible focus.*

 - void `visible_focus` (int v)
- Modifies keyboard focus navigation.*

 - int `visible_r` () const
- Returns whether a widget and all its parents are visible.*

 - int `w` () const
- Gets the widget width.*

 - `FI_When` `when` () const
- Returns the conditions under which the callback is called.*

 - void `when` (uchar i)
- Sets the flags used to decide when a callback is called.*

 - `FI_Window` * `window` () const
- Returns a pointer to the nearest parent window up the widget hierarchy.*

 - int `x` () const
- Gets the widget position in its window.*

 - int `y` () const
- Gets the widget position in its window.*

 - virtual `~FI_Widget` ()
- Destroys the widget.*

Additional Inherited Members

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group` * `current` ()
- Returns the currently active group.*
- static void `current` (`FI_Group` *g)
- Sets the current group.*

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *cb, void *d)
- The default callback for all widgets that don't set a callback.*
- static unsigned int `label_shortcut` (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int `test_shortcut` (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from `FI_Widget`

- enum {
- `INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
- `FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
- ,
- `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
- ,
- `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
- ,

```
GROUP_RELATIVE = 1<<16 , COPIED_TOOLTIP = 1<<17 , FULLSCREEN = 1<<18 , MAC_USE_ACCENTS_MENU
= 1<<19 ,
USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 , USERFLAG1 = 1<<31 }
```

flags possible values enumeration.

Protected Member Functions inherited from FI_Group

- void **draw_child** (FI_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const FI_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FI_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** ()
draws a focus rectangle around the widget
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

9.154.1 Detailed Description

This widget is based off the [Fl_Tabs](#) widget, but instead of displaying tabs it only changes "tabs" under program control.

Its primary purpose is to support "wizards" that step a user through configuration or troubleshooting tasks.

As with [Fl_Tabs](#), wizard panes are composed of child (usually [Fl_Group](#)) widgets. Navigation buttons must be added separately.

9.154.2 Constructor & Destructor Documentation

9.154.2.1 Fl_Wizard()

```
Fl_Wizard::Fl_Wizard (
    int xx,
    int yy,
    int ww,
    int hh,
    const char * l = 0 )
```

The constructor creates the [Fl_Wizard](#) widget at the specified position and size.

The inherited destructor destroys the widget and its children.

9.154.3 Member Function Documentation

9.154.3.1 next()

```
void Fl_Wizard::next ( )
```

This method shows the next child of the wizard.

If the last child is already visible, this function does nothing.

The documentation for this class was generated from the following files:

- [Fl_Wizard.H](#)
- [Fl_Wizard.cxx](#)

9.155 Fl_XBM_Image Class Reference

The [Fl_XBM_Image](#) class supports loading, caching, and drawing of X Bitmap (XBM) bitmap files.

```
#include <Fl_XBM_Image.H>
```

Inheritance diagram for [Fl_XBM_Image](#):

Public Member Functions

- [Fl_XBM_Image](#) (const char *filename)

The constructor loads the named XBM file from the given name filename.

Public Member Functions inherited from [Fl_Bitmap](#)

- [Fl_Image](#) * [copy](#) ()
- virtual [Fl_Image](#) * [copy](#) (int W, int H)

The copy() method creates a copy of the specified image.

- void **draw** (int X, int Y)
- virtual void **draw** (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- **FI_Bitmap** (const char *bits, int W, int H)
The constructors create a new bitmap from the specified bitmap data.
- **FI_Bitmap** (const uchar *bits, int W, int H)
The constructors create a new bitmap from the specified bitmap data.
- virtual void **label** (FI_Menu_Item *m)
The label() methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void **label** (FI_Widget *w)
The label() methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void **uncache** ()
If the image has been cached for display, delete the cache data.
- virtual ~**FI_Bitmap** ()
The destructor frees all memory and server resources that are used by the bitmap.

Public Member Functions inherited from FI_Image

- virtual void **color_average** (FI_Color c, float i)
The color_average() method averages the colors in the image with the FLTK color value c.
- **FI_Image** * **copy** ()
The copy() method creates a copy of the specified image.
- int **count** () const
The count() method returns the number of data values associated with the image.
- int **d** () const
Returns the current image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- virtual void **desaturate** ()
The desaturate() method converts an image to grayscale.
- void **draw** (int X, int Y)
Draws the image.
- int **fail** ()
Returns a value that is not 0 if there is currently no image available.
- **FI_Image** (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image height in pixels.
- void **inactive** ()
The inactive() method calls color_average(FL_BACKGROUND_COLOR, 0.33f) to produce an image that appears grayed out.
- int **ld** () const
Returns the current line data size in bytes.
- int **w** () const
Returns the current image width in pixels.
- virtual ~**FI_Image** ()
The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_RGB_Scaling](#) **RGB_scaling** ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for `copy(int, int)`.

Public Attributes inherited from [FI_Bitmap](#)

- int **alloc_array**
Non-zero if array points to bitmap data allocated internally.
- const [uchar](#) * **array**
pointer to raw bitmap data

Static Public Attributes inherited from [FI_Image](#)

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_NO_IMAGE** = -1

Protected Member Functions inherited from [FI_Image](#)

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void [draw_empty](#) (int X, int Y)
The protected method `draw_empty()` draws a box with an X in it.
- void **h** (int H)
Sets the current image height in pixels.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the current image width in pixels.

Static Protected Member Functions inherited from [FI_Image](#)

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

9.155.1 Detailed Description

The [FI_XBM_Image](#) class supports loading, caching, and drawing of X Bitmap (XBM) bitmap files.

9.155.2 Constructor & Destructor Documentation

9.155.2.1 [FI_XBM_Image](#)()

```
FI_XBM_Image::FI_XBM_Image (
    const char * name )
```

The constructor loads the named XBM file from the given name filename.

The destructor frees all memory and server resources that are used by the image.

The documentation for this class was generated from the following files:

- [FI_XBM_Image.H](#)
- [FI_XBM_Image.cxx](#)

9.156 Fl_XColor Struct Reference

Public Attributes

- unsigned char **b**
- unsigned char **g**
- unsigned char **mapped**
- unsigned long **pixel**
- unsigned char **r**

The documentation for this struct was generated from the following file:

- Fl_XColor.H

9.157 Fl_Xlib_Graphics_Driver Class Reference

The Xlib-specific graphics class.

```
#include <Fl_Device.H>
```

Inheritance diagram for Fl_Xlib_Graphics_Driver:

Public Member Functions

- const char * [class_name](#) ()
Returns the name of the class of this object.
- void [color](#) (Fl_Color c)
see [fl_color\(Fl_Color c\)](#).
- void [color](#) (uchar r, uchar g, uchar b)
see [fl_color\(uchar r, uchar g, uchar b\)](#).
- void [copy_offscreen](#) (int x, int y, int w, int h, Fl_Offscreen pixmap, int srcx, int srcy)
see [fl_copy_offscreen\(\)](#)
- int [descent](#) ()
see [fl_descent\(\)](#).
- void [draw](#) (const char *str, int n, int x, int y)
*see [fl_draw\(const char *str, int n, int x, int y\)](#).*
- void [draw](#) (Fl_Bitmap *pixmap, int XP, int YP, int WP, int HP, int cx, int cy)
Draws an [Fl_Bitmap](#) object to the device.
- void [draw](#) (Fl_Pixmap *pixmap, int XP, int YP, int WP, int HP, int cx, int cy)
Draws an [Fl_Pixmap](#) object to the device.
- void [draw](#) (Fl_RGB_Image *img, int XP, int YP, int WP, int HP, int cx, int cy)
Draws an [Fl_RGB_Image](#) object to the device.
- void [draw](#) (int angle, const char *str, int n, int x, int y)
*see [fl_draw\(int angle, const char *str, int n, int x, int y\)](#).*
- void [draw_image](#) (const uchar *buf, int X, int Y, int W, int H, int D=3, int L=0)
see [fl_draw_image\(const uchar buf, int X,int Y,int W,int H, int D, int L\)](#).*
- void [draw_image](#) (Fl_Draw_Image_Cb cb, void *data, int X, int Y, int W, int H, int D=3)
see [fl_draw_image\(Fl_Draw_Image_Cb cb, void data, int X,int Y,int W,int H, int D\)](#).*

- void `draw_image_mono` (const uchar *buf, int X, int Y, int W, int H, int D=1, int L=0)
see `fl_draw_image_mono(const uchar* buf, int X,int Y,int W,int H, int D, int L)`.
- void `draw_image_mono` (FI_Draw_Image_Cb cb, void *data, int X, int Y, int W, int H, int D=1)
see `fl_draw_image_mono(FI_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D)`.
- void `font` (FI_Font face, FI_Fontsize size)
see `fl_font(FI_Font face, FI_Fontsize size)`.
- int `height` ()
see `fl_height()`.
- void `rtl_draw` (const char *str, int n, int x, int y)
see `fl_rtl_draw(const char *str, int n, int x, int y)`.
- void `text_extents` (const char *, int n, int &dx, int &dy, int &w, int &h)
see `fl_text_extents(const char*, int n, int& dx, int& dy, int& w, int& h)`.
- double `width` (const char *str, int n)
see `fl_width(const char *str, int n)`.
- double `width` (unsigned int c)
see `fl_width(unsigned int n)`.

Public Member Functions inherited from `FI_Graphics_Driver`

- `FI_Color color` ()
see `fl_color(void)`.
- virtual int `draw_scaled` (FI_Image *img, int X, int Y, int W, int H)
Draws an FI_Image scaled to width W & height H with top-left corner at X,Y.
- `FI_Font font` ()
see `fl_font(void)`.
- `FI_Font_Descriptor * font_descriptor` ()
Returns a pointer to the current FI_Font_Descriptor for the graphics driver.
- void `font_descriptor` (FI_Font_Descriptor *d)
Sets the current FI_Font_Descriptor for the graphics driver.
- `FI_Fontsize size` ()
see `fl_size()`.
- virtual `~FI_Graphics_Driver` ()
The destructor.

Public Member Functions inherited from `FI_Device`

- virtual `~FI_Device` ()
Virtual destructor.

Static Public Attributes

- static const char * `class_id` = "FI_Xlib_Graphics_Driver"

Static Public Attributes inherited from `FI_Graphics_Driver`

- static const char * `class_id` = "FI_Graphics_Driver"

Static Public Attributes inherited from `FI_Device`

- static const char * `class_id` = "FI_Device"
A string that identifies each subclass of FI_Device.

Additional Inherited Members

Protected Attributes inherited from [Fl_Graphics_Driver](#)

- [matrix](#) * [fl_matrix](#)
 - Points to the current coordinate transformation matrix.*

9.157.1 Detailed Description

The Xlib-specific graphics class.

This class is implemented only on the Xlib platform.

9.157.2 Member Function Documentation

9.157.2.1 [class_name\(\)](#)

```
const char * Fl_Xlib_Graphics_Driver::class_name ( ) [inline], [virtual]
```

Returns the name of the class of this object.

Use of the [class_name\(\)](#) function is discouraged because it will be removed from future FLTK versions.

The class of an instance of an [Fl_Device](#) subclass can be checked with code such as:

```
if ( instance->class_name() == Fl_Printer::class_id ) { ... }
```

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.2 [color\(\)](#) [1/2]

```
void Fl_Xlib_Graphics_Driver::color (
    Fl_Color c ) [virtual]
```

see [fl_color\(Fl_Color c\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.3 [color\(\)](#) [2/2]

```
void Fl_Xlib_Graphics_Driver::color (
    uchar r,
    uchar g,
    uchar b ) [virtual]
```

see [fl_color\(uchar r, uchar g, uchar b\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.4 [copy_offscreen\(\)](#)

```
void Fl_Xlib_Graphics_Driver::copy_offscreen (
    int x,
    int y,
    int w,
    int h,
    Fl_Offscreen pixmap,
    int srcx,
    int srcy ) [virtual]
```

see [fl_copy_offscreen\(\)](#)

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.5 descent()

```
int Fl_Xlib_Graphics_Driver::descent ( ) [virtual]
see fl\_descent\(\).
```

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.6 draw() [1/5]

```
void Fl_Xlib_Graphics_Driver::draw (
    const char * str,
    int n,
    int x,
    int y ) [virtual]
```

see [fl_draw\(const char *str, int n, int x, int y\)](#).

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.7 draw() [2/5]

```
void Fl_Xlib_Graphics_Driver::draw (
    Fl\_Bitmap * bm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Bitmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.8 draw() [3/5]

```
void Fl_Xlib_Graphics_Driver::draw (
    Fl\_Pixmap * pxm,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_Pixmap](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.9 draw() [4/5]

```
void Fl_Xlib_Graphics_Driver::draw (
    Fl\_RGB\_Image * rgb,
    int XP,
    int YP,
    int WP,
    int HP,
    int cx,
    int cy ) [virtual]
```

Draws an [Fl_RGB_Image](#) object to the device.

Specifies a bounding box for the image, with the origin (upper left-hand corner) of the image offset by the cx and cy arguments.

Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.10 draw() [5/5]

```
void Fl_Xlib_Graphics_Driver::draw (
    int angle,
    const char * str,
    int n,
    int x,
    int y ) [virtual]
```

see [fl_draw\(int angle, const char *str, int n, int x, int y\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.11 draw_image() [1/2]

```
void Fl_Xlib_Graphics_Driver::draw_image (
    const uchar * buf,
    int X,
    int Y,
    int W,
    int H,
    int D = 3,
    int L = 0 ) [virtual]
```

see [fl_draw_image\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.12 draw_image() [2/2]

```
void Fl_Xlib_Graphics_Driver::draw_image (
    Fl_Draw_Image_Cb cb,
    void * data,
    int X,
    int Y,
    int W,
    int H,
    int D = 3 ) [virtual]
```

see [fl_draw_image\(Fl_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.13 draw_image_mono() [1/2]

```
void Fl_Xlib_Graphics_Driver::draw_image_mono (
    const uchar * buf,
    int X,
    int Y,
    int W,
    int H,
    int D = 1,
    int L = 0 ) [virtual]
```

see [fl_draw_image_mono\(const uchar* buf, int X,int Y,int W,int H, int D, int L\)](#).
Reimplemented from [Fl_Graphics_Driver](#).

9.157.2.14 draw_image_mono() [2/2]

```
void Fl_Xlib_Graphics_Driver::draw_image_mono (
    Fl_Draw_Image_Cb cb,
    void * data,
    int X,
    int Y,
    int W,
```

```
int H,  
int D = 1 ) [virtual]
```

see [fl_draw_image_mono\(FI_Draw_Image_Cb cb, void* data, int X,int Y,int W,int H, int D\)](#).
Reimplemented from [FI_Graphics_Driver](#).

9.157.2.15 font()

```
void Fl_Xlib_Graphics_Driver::font (  
    Fl_Font face,  
    Fl_Fontsize fsize ) [virtual]
```

see [fl_font\(Fl_Font face, Fl_Fontsize size\)](#).
Reimplemented from [FI_Graphics_Driver](#).

9.157.2.16 height()

```
int Fl_Xlib_Graphics_Driver::height ( ) [virtual]  
see fl\_height\(\).
```

Reimplemented from [FI_Graphics_Driver](#).

9.157.2.17 rtl_draw()

```
void Fl_Xlib_Graphics_Driver::rtl_draw (  
    const char * str,  
    int n,  
    int x,  
    int y ) [virtual]
```

see [fl_rtl_draw\(const char *str, int n, int x, int y\)](#).
Reimplemented from [FI_Graphics_Driver](#).

9.157.2.18 text_extents()

```
void Fl_Xlib_Graphics_Driver::text_extents (  
    const char * t,  
    int n,  
    int & dx,  
    int & dy,  
    int & w,  
    int & h ) [virtual]
```

see [fl_text_extents\(const char*, int n, int& dx, int& dy, int& w, int& h\)](#).
Reimplemented from [FI_Graphics_Driver](#).

9.157.2.19 width() [1/2]

```
double Fl_Xlib_Graphics_Driver::width (  
    const char * str,  
    int n ) [virtual]
```

see [fl_width\(const char *str, int n\)](#).
Reimplemented from [FI_Graphics_Driver](#).

9.157.2.20 width() [2/2]

```
double Fl_Xlib_Graphics_Driver::width (  
    unsigned int c ) [virtual]
```

see [fl_width\(unsigned int n\)](#).
Reimplemented from [FI_Graphics_Driver](#).

The documentation for this class was generated from the following files:

- [FI_Device.H](#)
- [FI_Bitmap.cxx](#)
- [fl_color.cxx](#)

- FI_Device.cxx
- fl_draw_image.cxx
- FI_Image.cxx
- FI_Pixmap.cxx

9.158 FI_XPM_Image Class Reference

The [FI_XPM_Image](#) class supports loading, caching, and drawing of X Pixmap (XPM) images, including transparency.

```
#include <Fl_XPM_Image.H>
```

Inheritance diagram for [FI_XPM_Image](#):

Public Member Functions

- [FI_XPM_Image](#) (const char *filename)
The constructor loads the XPM image from the name filename.

Public Member Functions inherited from [FI_Pixmap](#)

- virtual void [color_average](#) ([FI_Color](#) c, float i)
The [color_average\(\)](#) method averages the colors in the image with the FLTK color value c.
- [FI_Image](#) * [copy](#) ()
- virtual [FI_Image](#) * [copy](#) (int W, int H)
The [copy\(\)](#) method creates a copy of the specified image.
- virtual void [desaturate](#) ()
The [desaturate\(\)](#) method converts an image to grayscale.
- void **draw** (int X, int Y)
- virtual void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0)
Draws the image with a bounding box.
- [FI_Pixmap](#) (char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [FI_Pixmap](#) (const char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [FI_Pixmap](#) (const uchar *const *D)
The constructors create a new pixmap from the specified XPM data.
- [FI_Pixmap](#) (uchar *const *D)
The constructors create a new pixmap from the specified XPM data.
- virtual void [label](#) ([FI_Menu_Item](#) *m)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [label](#) ([FI_Widget](#) *w)
The [label\(\)](#) methods are an obsolete way to set the image attribute of a widget or menu item.
- virtual void [uncache](#) ()
If the image has been cached for display, delete the cache data.
- virtual ~[FI_Pixmap](#) ()
The destructor frees all memory and server resources that are used by the pixmap.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * [copy](#) ()
The [copy\(\)](#) method creates a copy of the specified image.
- int [count](#) () const
The [count\(\)](#) method returns the number of data values associated with the image.
- int [d](#) () const
Returns the current image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- void [draw](#) (int X, int Y)
Draws the image.
- int [fail](#) ()
Returns a value that is not 0 if there is currently no image available.
- [FI_Image](#) (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int [h](#) () const
Returns the current image height in pixels.
- void [inactive](#) ()
The [inactive\(\)](#) method calls `color_average(FL_BACKGROUND_COLOR, 0.33f)` to produce an image that appears grayed out.
- int [ld](#) () const
Returns the current line data size in bytes.
- int [w](#) () const
Returns the current image width in pixels.
- virtual ~[FI_Image](#) ()
The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for [copy\(int, int\)](#).

Public Attributes inherited from [FI_Pixmap](#)

- int [alloc_data](#)

Static Public Attributes inherited from [FI_Image](#)

- static const int [ERR_FILE_ACCESS](#) = -2
- static const int [ERR_FORMAT](#) = -3
- static const int [ERR_NO_IMAGE](#) = -1

Protected Member Functions inherited from [FI_Pixmap](#)

- void [measure](#) ()

Protected Member Functions inherited from [Fl_Image](#)

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current array pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- void **h** (int H)
Sets the current image height in pixels.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the current image width in pixels.

Static Protected Member Functions inherited from [Fl_Image](#)

- static void **labeltype** (const [Fl_Label](#) *lo, int lx, int ly, int lw, int lh, [Fl_Align](#) la)
- static void **measure** (const [Fl_Label](#) *lo, int &lw, int &lh)

9.158.1 Detailed Description

The [Fl_XPM_Image](#) class supports loading, caching, and drawing of X Pixmap (XPM) images, including transparency.

9.158.2 Constructor & Destructor Documentation

9.158.2.1 [Fl_XPM_Image\(\)](#)

```
Fl_XPM_Image::Fl_XPM_Image (
    const char * name )
```

The constructor loads the XPM image from the name filename.

The destructor frees all memory and server resources that are used by the image.

The documentation for this class was generated from the following files:

- [Fl_XPM_Image.H](#)
- [Fl_XPM_Image.cxx](#)

9.159 Fl_Text_Editor::Key_Binding Struct Reference

Simple linked list item associating a key/state to a function.

```
#include <Fl_Text_Editor.H>
```

Public Attributes

- [Key_Func](#) **function**
associated function
- int **key**
the key pressed
- [Key_Binding](#) * **next**
next key binding in the list
- int **state**
the state of key modifiers

9.159.1 Detailed Description

Simple linked list item associating a key/state to a function.

The documentation for this struct was generated from the following file:

- [Fl_Text_Editor.H](#)

9.160 Fl_Graphics_Driver::matrix Struct Reference

A 2D coordinate transformation matrix.

```
#include <Fl_Device.H>
```

Public Attributes

- double **a**
- double **b**
- double **c**
- double **d**
- double **x**
- double **y**

9.160.1 Detailed Description

A 2D coordinate transformation matrix.

The documentation for this struct was generated from the following file:

- [Fl_Device.H](#)

9.161 Fl_Preferences::Name Class Reference

'Name' provides a simple method to create numerical or more complex procedural names for entries and groups on the fly.

```
#include <Fl_Preferences.H>
```

Public Member Functions

- [Name](#) (const char *format,...)
Creates a group name or entry name on the fly.
- [Name](#) (unsigned int n)
Creates a group name or entry name on the fly.
- **operator const char * ()**
Return the [Name](#) as a "C" string.

9.161.1 Detailed Description

'Name' provides a simple method to create numerical or more complex procedural names for entries and groups on the fly.

Example: `prefs.set(Fl_Preferences::Name("File%d",i),file[i]);`

See `test/preferences.cxx` as a sample for writing arrays into preferences.

'Name' is actually implemented as a class inside [Fl_Preferences](#). It casts into `const char*` and gets automatically destroyed after the enclosing call ends.

9.161.2 Constructor & Destructor Documentation

9.161.2.1 Name() [1/2]

```
Fl_Preferences::Name::Name (
    unsigned int n )
```

Creates a group name or entry name on the fly.

This version creates a simple unsigned integer as an entry name.

```
int n, i;
Fl_Preferences prev( appPrefs, "PreviousFiles" );
prev.get( "n", 0 );
for ( i=0; i<n; i++ )
    prev.get( Fl_Preferences::Name(i), prevFile[i], "" );
```

9.161.2.2 Name() [2/2]

```
Fl_Preferences::Name::Name (
    const char * format,
    ... )
```

Creates a group name or entry name on the fly.

This version creates entry names as in 'printf'.

```
int n, i;
Fl_Preferences prefs( USER, "matthiasm.com", "test" );
prev.get( "nFiles", 0 );
for ( i=0; i<n; i++ )
    prev.get( Fl_Preferences::Name( "File%d", i ), prevFile[i], "" );
```

The documentation for this class was generated from the following files:

- Fl_Preferences.H
- Fl_Preferences.cxx

9.162 Fl_Preferences::Node Class Reference

Public Member Functions

- void **add** (const char *line)
- **Node** * **addChild** (const char *path)
- const char * **child** (int ix)
- **Node** * **childNodes** (int ix)
- void **deleteAllChildren** ()
- void **deleteAllEntries** ()
- char **deleteEntry** (const char *name)
- char **dirty** ()
- **Entry** & **entry** (int i)
- **Node** * **find** (const char *path)
- **RootNode** * **findRoot** ()
- const char * **get** (const char *name)
- int **getEntry** (const char *name)
- const char * **name** ()
- int **nChildren** ()
- int **nEntry** ()
- **Node** (const char *path)
- **Node** * **parent** ()
- const char * **path** ()
- char **remove** ()
- **Node** * **search** (const char *path, int offset=0)
- void **set** (const char *line)
- void **set** (const char *name, const char *value)
- void **setParent** (**Node** *parent)
- void **setRoot** (**RootNode** *r)
- int **write** (FILE *f)

Static Public Attributes

- static int **lastEntrySet** = -1

The documentation for this class was generated from the following files:

- [Fl_Preferences.H](#)
- [Fl_Preferences.cxx](#)

9.163 Fl_Paged_Device::page_format Struct Reference

width, height and name of a page format

```
#include <Fl_Paged_Device.H>
```

Public Attributes

- int **height**
height in points
- const char * **name**
format name
- int **width**
width in points

9.163.1 Detailed Description

width, height and name of a page format

The documentation for this struct was generated from the following file:

- [Fl_Paged_Device.H](#)

9.164 Fl_Preferences::RootNode Class Reference**Public Member Functions**

- char **getPath** (char *[path](#), int pathlen)
- int **read** ()
- **RootNode** ([Fl_Preferences](#) *)
- **RootNode** ([Fl_Preferences](#) *, const char *[path](#), const char *[vendor](#), const char *[application](#))
- **RootNode** ([Fl_Preferences](#) *, [Root](#) root, const char *[vendor](#), const char *[application](#))
- int **write** ()

The documentation for this class was generated from the following files:

- [Fl_Preferences.H](#)
- [Fl_Preferences.cxx](#)

9.165 Fl_Scroll::ScrollInfo Struct Reference

Structure to manage scrollbar and widget interior sizes.

```
#include <Fl_Scroll.H>
```

Public Attributes

- [Fl_Region_LRTB](#) **child**
child bounding box: left/right/top/bottom
- int **hneeded**
horizontal scrollbar visibility
- [Fl_Scrollbar_Data](#) **hscroll**
horizontal scrollbar region + values
- [Fl_Region_XYWH](#) **innerbox**
widget's inner box, excluding scrollbars
- [Fl_Region_XYWH](#) **innerchild**
widget's inner box, including scrollbars
- int **scrollsize**
the effective scrollbar thickness (local or global)
- int **vneeded**
vertical scrollbar visibility
- [Fl_Scrollbar_Data](#) **vscroll**
vertical scrollbar region + values

9.165.1 Detailed Description

Structure to manage scrollbar and widget interior sizes.

This is filled out by [recalc_scrollbars\(\)](#) for use in calculations that need to know the visible scroll area size, etc.

Note

Availability in FLTK_ABI_VERSION 10303 or higher.

The documentation for this struct was generated from the following file:

- [Fl_Scroll.H](#)

9.166 Fl_Window::shape_data_type Struct Reference

Data supporting a non-rectangular window shape.

```
#include <Fl_Window.H>
```

Public Attributes

- int **lh_**
height of shape image
- int **lw_**
width of shape image
- [Fl_Image](#) * **shape_**
shape image
- [Fl_Bitmap](#) * **todelete_**
auxiliary bitmap image

9.166.1 Detailed Description

Data supporting a non-rectangular window shape.

The documentation for this struct was generated from the following file:

- [Fl_Window.H](#)

9.167 FI_Text_Display::Style_Table_Entry Struct Reference

This structure associates the color, font, and font size of a string to draw with an attribute mask matching attr.
`#include <Fl_Text_Display.H>`

Public Attributes

- unsigned **attr**
currently unused (this may be change in the future)
- [FI_Color](#) **color**
text color
- [FI_Font](#) **font**
text font
- [FI_Fontsize](#) **size**
text font size

9.167.1 Detailed Description

This structure associates the color, font, and font size of a string to draw with an attribute mask matching attr. There must be one entry for each style that can be used in an [FI_Text_Display](#) for displaying text. The style table is an array of struct [Style_Table_Entry](#). The style table is associated with an [FI_Text_Display](#) by using [FI_Text_Display::highlight_data\(\)](#).

10.3 Enumerations.H File Reference

This file contains type definitions and general enumerations.

```
#include <FL/abi-version.h>
#include "Fl_Export.H"
#include "fl_types.h"
```

Macros

Mouse and Keyboard Events

This and the following constants define the non-ASCII keys on the keyboard for `FL_KEYBOARD` and `FL_SHORTCUT` events.

```
\todo      FL_Button and FL_key... constants could be structured better
          (use an enum or some doxygen grouping ?)
```

```
\sa Fl::event_key() and Fl::get_key(int) (use ascii letters for all other keys):
```

- **#define FL_Alt_L** 0xfe9
The left alt key.
- **#define FL_Alt_R** 0xfea
The right alt key.
- **#define FL_Back** 0xEF26 /* Like back on a browser */
- **#define FL_BackSpace** 0xff08
The backspace key.
- **#define FL_Button** 0xfee8
A mouse button; use `FL_Button + n` for mouse button `n`.
- **#define FL_Caps_Lock** 0xfe5
The caps lock key.
- **#define FL_Control_L** 0xfe3
The lefthand control key.
- **#define FL_Control_R** 0xfe4
The righthand control key.
- **#define FL_Delete** 0xffff
The delete key.
- **#define FL_Down** 0xff54
The down arrow key.
- **#define FL_Eisu** 0xff2f
The Eisu key of JIS keyboards.
- **#define FL_End** 0xff57
The end key.
- **#define FL_Enter** 0xff0d
The enter key.
- **#define FL_Escape** 0xff1b
The escape key.
- **#define FL_F** 0xffbd
One of the function keys; use `FL_F + n` for function key `n`.
- **#define FL_F_Last** 0xfe0
The last function key; use to range-check function keys.
- **#define FL_Favorites** 0xEF30 /* Show favorite locations */
- **#define FL_Forward** 0xEF27 /* Like forward on a browser */
- **#define FL_Help** 0xff68
The 'help' key on Mac keyboards.
- **#define FL_Home** 0xff50
The home key.
- **#define FL_Home_Page** 0xEF18 /* Display user's home page */
- **#define FL_Insert** 0xff63
The insert key.
- **#define FL_Iso_Key** 0xff0c
The additional key of ISO keyboards.
- **#define FL_JIS_Underscore** 0xff31
The underscore key of JIS keyboards.
- **#define FL_Kana** 0xff2e
The Kana key of JIS keyboards.
- **#define FL_KP** 0xff80
One of the keypad numbers; use `FL_KP + 'n'` for digit `n`.
- **#define FL_KP_Enter** 0xff8d
The enter key on the keypad, same as `FL_KP+'r'`.
- **#define FL_KP_Last** 0xffbd
The last keypad key; use to range-check keypad.
- **#define FL_Left** 0xff51

- The left arrow key.*
- #define **FL_Mail** 0xEF19 /* Invoke user's mail program */
- #define **FL_Media_Next** 0xEF17 /* Next track */
- #define **FL_Media_Play** 0xEF14 /* Start playing of audio */
- #define **FL_Media_Prev** 0xEF16 /* Previous track */
- #define **FL_Media_Stop** 0xEF15 /* Stop playing audio */
- #define **FL_Menu** 0xff67
- The menu key.*
- #define **FL_Meta_L** 0xffe7
- The left meta/Windows key.*
- #define **FL_Meta_R** 0xffe8
- The right meta/Windows key.*
- #define **FL_Num_Lock** 0xff7f
- The num lock key.*
- #define **FL_Page_Down** 0xff56
- The page-down key.*
- #define **FL_Page_Up** 0xff55
- The page-up key.*
- #define **FL_Pause** 0xff13
- The pause key.*
- #define **FL_Print** 0xff61
- The print (or print-screen) key.*
- #define **FL_Refresh** 0xEF29 /* Refresh the page */
- #define **FL_Right** 0xff53
- The right arrow key.*
- #define **FL_Scroll_Lock** 0xff14
- The scroll lock key.*
- #define **FL_Search** 0xEF1B /* Search */
- #define **FL_Shift_L** 0xffe1
- The lefthand shift key.*
- #define **FL_Shift_R** 0xffe2
- The righthand shift key.*
- #define **FL_Sleep** 0xEF2F /* Put system to sleep */
- #define **FL_Stop** 0xEF28 /* Stop current operation */
- #define **FL_Tab** 0xff09
- The tab key.*
- #define **FL_Up** 0xff52
- The up arrow key.*
- #define **FL_Volume_Down** 0xEF11 /* Volume control down */
- #define **FL_Volume_Mute** 0xEF12 /* Mute sound from the system */
- #define **FL_Volume_Up** 0xEF13 /* Volume control up */
- #define **FL_Yen** 0xff30
- The Yen key of JIS keyboards.*

Mouse Buttons

These constants define the button numbers for FL_PUSH and FL_RELEASE events.

```
\sa Fl::event_button()
```

- #define **FL_LEFT_MOUSE** 1
- The left mouse button.*
- #define **FL_MIDDLE_MOUSE** 2
- The middle mouse button.*
- #define **FL_RIGHT_MOUSE** 3
- The right mouse button.*

Event States

The following constants define bits in the Fl::event_state() value.

- #define **FL_ALT** 0x00080000

- *One of the alt keys is down.*
- #define **FL_BUTTON**(n) (0x00800000<<(n))
Mouse button n (n > 0) is pushed.
- #define **FL_BUTTON1** 0x01000000
Mouse button 1 is pushed.
- #define **FL_BUTTON2** 0x02000000
Mouse button 2 is pushed.
- #define **FL_BUTTON3** 0x04000000
Mouse button 3 is pushed.
- #define **FL_BUTTONS** 0x7f000000
Any mouse button is pushed.
- #define **FL_CAPS_LOCK** 0x00020000
The caps lock is on.
- #define **FL_COMMAND** **FL_CTRL**
An alias for FL_CTRL on WIN32 and X11, or FL_META on MacOS X.
- #define **FL_CONTROL** **FL_META**
An alias for FL_META on WIN32 and X11, or FL_CTRL on MacOS X.
- #define **FL_CTRL** 0x00040000
One of the ctrl keys is down.
- #define **FL_KEY_MASK** 0x0000ffff
All keys are 16 bit for now.
- #define **FL_META** 0x00400000
One of the meta/Windows keys is down.
- #define **FL_NUM_LOCK** 0x00100000
The num lock is on.
- #define **FL_SCROLL_LOCK** 0x00800000
The scroll lock is on.
- #define **FL_SHIFT** 0x00010000
One of the shift keys is down.

Enumerations

When Conditions

- enum **Fl_When** {
FL_WHEN_NEVER = 0 , **FL_WHEN_CHANGED** = 1 , **FL_WHEN_NOT_CHANGED** = 2 , **FL_WHEN_RELEASE** = 4 ,
FL_WHEN_RELEASE_ALWAYS = 6 , **FL_WHEN_ENTER_KEY** = 8 , **FL_WHEN_ENTER_KEY_ALWAYS** = 10 , **FL_WHEN_ENTER_KEY_CHANGED** = 11 }
These constants determine when a callback is performed.

Version Numbers

FLTK defines some constants to help the programmer to find out, for which FLTK version a program is compiled. The following constants are defined:

- #define **FL_ABI_VERSION** **FL_API_VERSION**
The FLTK ABI (Application Binary Interface) version number as an int.
- #define **FL_API_VERSION** (**FL_MAJOR_VERSION***10000 + **FL_MINOR_VERSION***100 + **FL_PATCH_VERSION**)
The FLTK API version number as an int.
- enum **Fl_Event** {
FL_NO_EVENT = 0 , **FL_PUSH** = 1 , **FL_RELEASE** = 2 , **FL_ENTER** = 3 ,
FL_LEAVE = 4 , **FL_DRAG** = 5 , **FL_FOCUS** = 6 , **FL_UNFOCUS** = 7 ,
FL_KEYDOWN = 8 , **FL_KEYBOARD** = 8 , **FL_KEYUP** = 9 , **FL_CLOSE** = 10 ,
FL_MOVE = 11 , **FL_SHORTCUT** = 12 , **FL_DEACTIVATE** = 13 , **FL_ACTIVATE** = 14 ,
FL_HIDE = 15 , **FL_SHOW** = 16 , **FL_PASTE** = 17 , **FL_SELECTIONCLEAR** = 18 ,
FL_MOUSEWHEEL = 19 , **FL_DND_ENTER** = 20 , **FL_DND_DRAG** = 21 , **FL_DND_LEAVE** = 22 ,
FL_DND_RELEASE = 23 , **FL_SCREEN_CONFIGURATION_CHANGED** = 24 , **FL_FULLSCREEN** = 25 ,
FL_ZOOM_GESTURE = 26 }

Every time a user moves the mouse pointer, clicks a button, or presses a key, an event is generated and sent to your application.

- #define `FL_MAJOR_VERSION` 1
The major release version of this FLTK library.
- #define `FL_MINOR_VERSION` 3
The minor release version for this library.
- #define `FL_PATCH_VERSION` 9
The patch version for this library.
- #define `FL_VERSION`
The FLTK version number as a double.
- #define `FLTK_ABI_VERSION` `FL_ABI_VERSION`

Box Types

FLTK standard box types

This enum defines the standard box types included with FLTK.

`FL_NO_BOX` means nothing is drawn at all, so whatever is already on the screen remains. The `FL_..._FRAME` types only draw their edges, leaving the interior unchanged. The blue color in Figure 1 is the area that is not drawn by the frame types.

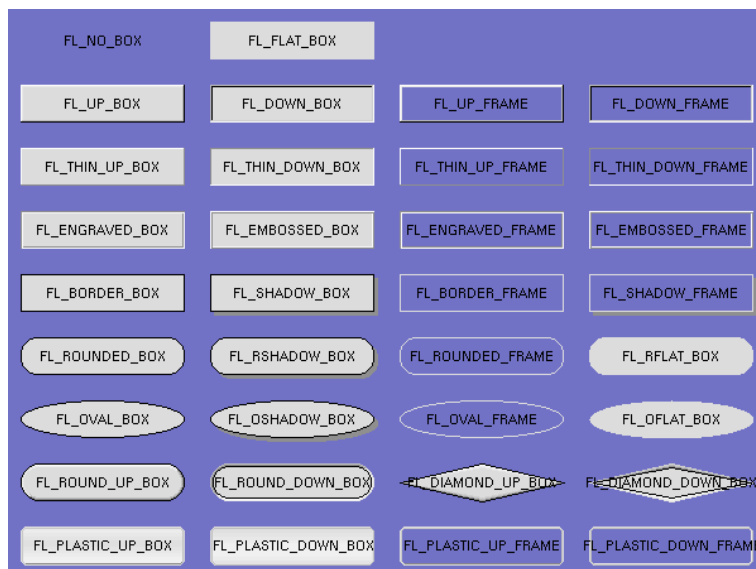

Figure 10.1 FLTK standard box types

Todo Description of boxtypes is incomplete. See below for the defined enum `Fl_Boxtype`.

See also

`src/Fl_get_system_colors.cxx`

- `Fl_Boxtype fl_box` (`Fl_Boxtype` b)
Get the filled version of a frame.
- enum `Fl_Boxtype` {

 - #define **FL_SHADOW_LABEL** fl_define_FL_SHADOW_LABEL()
 - #define **FL_SYMBOL_LABEL** **FL_NORMAL_LABEL**

Sets the current label type and return its corresponding Fl_Labeltype value.

Colors

The *Fl_Color* type holds an FLTK color value.

Colors are either 8-bit indexes into a [virtual colormap](#) or 24-bit RGB color values. (See [Colors](#) for the default FLTK colormap)

Color indices occupy the lower 8 bits of the value, while RGB colors occupy the upper 24 bits, for a byte organization of RGBI.

```
Fl_Color => 0xrrgbbbii
           | | | |
           | | | +--- index between 0 and 255
           | | +----- blue color component (8 bit)
           | +----- green component (8 bit)
           +----- red component (8 bit)
```

A color can have either an index or an rgb value. Colors with rgb set and an index >0 are reserved for special use.

- const *Fl_Color* **FL_BACKGROUND2_COLOR** = 7
 the default background color for text, list, and valuator widgets
- const *Fl_Color* **FL_BACKGROUND_COLOR** = 49
- const *Fl_Color* **FL_BLACK** = 56
- const *Fl_Color* **FL_BLUE** = 216
- typedef unsigned int **Fl_Color**
 An FLTK color value; see also Colors
- FL_EXPORT *Fl_Color* fl_color_average (*Fl_Color* c1, *Fl_Color* c2, float weight)

- Returns the weighted average color between the two given colors.*
- #define **FL_COLOR_CUBE** (FI_Color)56
- FI_Color fl_color_cube (int r, int g, int b)
 - Returns a color out of the color cube.*
- FL_EXPORT FI_Color fl_contrast (FI_Color fg, FI_Color bg)
 - Returns a color that contrasts with the background color.*
- const FI_Color **FL_CYAN** = 223
- const FI_Color **FL_DARK1** = 47

- const FI_Color **FL_DARK_RED** = 72
- const FI_Color **FL_DARK_YELLOW** = 76
- FI_Color fl_darker (FI_Color c)
 - Returns a darker version of the specified color.*
- const FI_Color **FL_FOREGROUND_COLOR** = 0
 - the default foreground color (0) used for labels and text*
- #define **FL_FREE_COLOR** (FI_Color)16
- #define **FL_GRAY** FL_BACKGROUND_COLOR
- const FI_Color **FL_GRAY0** = 32
- #define **FL_GRAY_RAMP** (FI_Color)32
- FI_Color fl_gray_ramp (int i)
 - Returns a gray color value from black (i == 0) to white (i == FL_NUM_GRAY - 1).*
- const FI_Color **FL_GREEN** = 63
- FL_EXPORT FI_Color fl_inactive (FI_Color c)
 - Returns the inactive, dimmed version of the given color.*
- const FI_Color **FL_INACTIVE_COLOR** = 8
 - the inactive foreground color*
- const FI_Color **FL_LIGHT1** = 50
- const FI_Color **FL_LIGHT2** = 52
- const FI_Color **FL_LIGHT3** = 54
- FI_Color fl_lighter (FI_Color c)
 - Returns a lighter version of the specified color.*
- const FI_Color **FL_MAGENTA** = 248
- #define **FL_NUM_BLUE** 5
- #define **FL_NUM_FREE_COLOR** 16
- #define **FL_NUM_GRAY** 24
- #define **FL_NUM_GREEN** 8
- #define **FL_NUM_RED** 5
- const FI_Color **FL_RED** = 88
- FI_Color fl_rgb_color (uchar g)
 - Returns the 24-bit color value closest to g (grayscale).*
- FI_Color fl_rgb_color (uchar r, uchar g, uchar b)
 - Returns the 24-bit color value closest to r, g, b.*
- const FI_Color **FL_SELECTION_COLOR** = 15
 - the default selection/highlight color*
- const FI_Color **FL_WHITE** = 255
- const FI_Color **FL_YELLOW** = 95

Cursors

- enum { [FL_READ](#) = 1 , [FL_WRITE](#) = 4 , [FL_EXCEPT](#) = 8 }
FD "when" conditions.
- enum [Fl_Cursor](#) {
[FL_CURSOR_DEFAULT](#) = 0 , [FL_CURSOR_ARROW](#) = 35 , [FL_CURSOR_CROSS](#) = 66 , [FL_CURSOR_WAIT](#) = 76 ,
[FL_CURSOR_INSERT](#) = 77 , [FL_CURSOR_HAND](#) = 31 , [FL_CURSOR_HELP](#) = 47 , [FL_CURSOR_MOVE](#) = 27 ,
[FL_CURSOR_NS](#) = 78 , [FL_CURSOR_WE](#) = 79 , [FL_CURSOR_NWSE](#) = 80 , [FL_CURSOR_NESW](#) = 81 ,
[FL_CURSOR_N](#) = 70 , [FL_CURSOR_NE](#) = 69 , [FL_CURSOR_E](#) = 49 , [FL_CURSOR_SE](#) = 8 ,
[FL_CURSOR_S](#) = 9 , [FL_CURSOR_SW](#) = 7 , [FL_CURSOR_W](#) = 36 , [FL_CURSOR_NW](#) = 68 ,
[FL_CURSOR_NONE](#) = 255 }
The following constants define the mouse cursors that are available in FLTK.
- enum [Fl_Damage](#) {
[FL_DAMAGE_CHILD](#) = 0x01 , [FL_DAMAGE_EXPOSE](#) = 0x02 , [FL_DAMAGE_SCROLL](#) = 0x04 ,
[FL_DAMAGE_OVERLAY](#) = 0x08 ,
[FL_DAMAGE_USER1](#) = 0x10 , [FL_DAMAGE_USER2](#) = 0x20 , [FL_DAMAGE_ALL](#) = 0x80 }
Damage masks.
- #define [FL_IMAGE_WITH_ALPHA](#) 0x40000000
- enum [Fl_Mode](#) {
[FL_RGB](#) = 0 , [FL_INDEX](#) = 1 , [FL_SINGLE](#) = 0 , [FL_DOUBLE](#) = 2 ,
[FL_ACCUM](#) = 4 , [FL_ALPHA](#) = 8 , [FL_DEPTH](#) = 16 , [FL_STENCIL](#) = 32 ,
[FL_RGB8](#) = 64 , [FL_MULTISAMPLE](#) = 128 , [FL_STEREO](#) = 256 , [FL_FAKE_SINGLE](#) = 512 ,
[FL_OPENGL3](#) = 1024 }
visual types and `Fl_Gl_Window::mode()` (values match `Glut`)

Alignment Flags

Flags to control the label alignment.

This controls how the label is displayed next to or inside the widget. The default value is [FL_ALIGN_CENTER](#) (0) for most widgets, which centers the label inside the widget.

Flags can be or'd to achieve a combination of alignments, but there are some "magic values" (e.g. combinations of TOP and BOTTOM and of LEFT and RIGHT) that have special meanings (see below). For instance:

`FL_ALIGN_TOP_LEFT == (FL_ALIGN_TOP|FL_ALIGN_LEFT) != FL_ALIGN_LEFT_TOP.`

Outside alignments ([FL_ALIGN_INSIDE](#) is not set):

```

      TOP_LEFT      TOP      TOP_RIGHT
+-----+
LEFT_TOP |                | RIGHT_TOP
|                |                |
LEFT |                | RIGHT
|                |                |
LEFT_BOTTOM |                | RIGHT_BOTTOM
+-----+
      BOTTOM_LEFT  BOTTOM  BOTTOM_RIGHT

```

Inside alignments ([FL_ALIGN_INSIDE](#) is set):

```

+-----+
|TOP_LEFT      TOP      TOP_RIGHT|
|                |                |
|LEFT          CENTER    RIGHT   |
|                |                |
|BOTTOM_LEFT  BOTTOM  BOTTOM_RIGHT|
+-----+

```

See also

[FL_ALIGN_CENTER](#), etc.

- typedef unsigned **Fl_Align**
FLTK type for alignment control.
- const [Fl_Align](#) **FL_ALIGN_BOTTOM** = ([Fl_Align](#))2
Align the label at the bottom of the widget.

- const `Fl_Align FL_ALIGN_BOTTOM_LEFT` = `FL_ALIGN_BOTTOM` | `FL_ALIGN_LEFT`
- const `Fl_Align FL_ALIGN_BOTTOM_RIGHT` = `FL_ALIGN_BOTTOM` | `FL_ALIGN_RIGHT`
- const `Fl_Align FL_ALIGN_CENTER` = (`Fl_Align`)0
Align the label horizontally in the middle.
- const `Fl_Align FL_ALIGN_CLIP` = (`Fl_Align`)64
All parts of the label that are larger than the widget will not be drawn.
- const `Fl_Align FL_ALIGN_IMAGE_BACKDROP` = (`Fl_Align`)0x0200
If the label contains an image, draw the image or deimage in the background.
- const `Fl_Align FL_ALIGN_IMAGE_MASK` = 0x0320
- const `Fl_Align FL_ALIGN_IMAGE_NEXT_TO_TEXT` = (`Fl_Align`)0x0100
If the label contains an image, draw the text to the right of the image.
- const `Fl_Align FL_ALIGN_IMAGE_OVER_TEXT` = (`Fl_Align`)0x0000
If the label contains an image, draw the text below the image.
- const `Fl_Align FL_ALIGN_INSIDE` = (`Fl_Align`)16
Draw the label inside of the widget.
- const `Fl_Align FL_ALIGN_LEFT` = (`Fl_Align`)4
Align the label at the left of the widget.
- const `Fl_Align FL_ALIGN_LEFT_BOTTOM` = 0x000d
- const `Fl_Align FL_ALIGN_LEFT_TOP` = 0x0007
- const `Fl_Align FL_ALIGN_NOWRAP` = (`Fl_Align`)0
- const `Fl_Align FL_ALIGN_POSITION_MASK` = 0x000f
- const `Fl_Align FL_ALIGN_RIGHT` = (`Fl_Align`)8
Align the label to the right of the widget.
- const `Fl_Align FL_ALIGN_RIGHT_BOTTOM` = 0x000e
- const `Fl_Align FL_ALIGN_RIGHT_TOP` = 0x000b
- const `Fl_Align FL_ALIGN_TEXT_NEXT_TO_IMAGE` = (`Fl_Align`)0x0120
If the label contains an image, draw the text to the left of the image.
- const `Fl_Align FL_ALIGN_TEXT_OVER_IMAGE` = (`Fl_Align`)0x0020
If the label contains an image, draw the text on top of the image.
- const `Fl_Align FL_ALIGN_TOP` = (`Fl_Align`)1
Align the label at the top of the widget.
- const `Fl_Align FL_ALIGN_TOP_LEFT` = `FL_ALIGN_TOP` | `FL_ALIGN_LEFT`
- const `Fl_Align FL_ALIGN_TOP_RIGHT` = `FL_ALIGN_TOP` | `FL_ALIGN_RIGHT`
- const `Fl_Align FL_ALIGN_WRAP` = (`Fl_Align`)128
Wrap text that does not fit the width of the widget.

Font Numbers

The following constants define the standard FLTK fonts:

- const `Fl_Font FL_BOLD` = 1
add this to helvetica, courier, or times
- const `Fl_Font FL_BOLD_ITALIC` = 3
add this to helvetica, courier, or times
- const `Fl_Font FL_COURIER` = 4
Courier normal.
- const `Fl_Font FL_COURIER_BOLD` = 5
Courier bold.
- const `Fl_Font FL_COURIER_BOLD_ITALIC` = 7
Courier bold-italic.
- const `Fl_Font FL_COURIER_ITALIC` = 6
Courier italic.
- typedef int `Fl_Font`

- A font number is an index into the internal font table.*
- typedef int [Fl_Fontsize](#)
Size of a font in pixels.
 - const [Fl_Font](#) [FL_FREE_FONT](#) = 16
first one to allocate
 - const [Fl_Font](#) [FL_HELVETICA](#) = 0
Helvetica (or Arial) normal (0)
 - const [Fl_Font](#) [FL_HELVETICA_BOLD](#) = 1
Helvetica (or Arial) bold.
 - const [Fl_Font](#) [FL_HELVETICA_BOLD_ITALIC](#) = 3
Helvetica (or Arial) bold-oblique.
 - const [Fl_Font](#) [FL_HELVETICA_ITALIC](#) = 2
Helvetica (or Arial) oblique.
 - const [Fl_Font](#) [FL_ITALIC](#) = 2
add this to helvetica, courier, or times
 - FL_EXPORT [Fl_Fontsize](#) [FL_NORMAL_SIZE](#)
normal font size
 - const [Fl_Font](#) [FL_SCREEN](#) = 13
Default monospaced screen font.
 - const [Fl_Font](#) [FL_SCREEN_BOLD](#) = 14
Default monospaced bold screen font.
 - const [Fl_Font](#) [FL_SYMBOL](#) = 12
Standard symbol font.
 - const [Fl_Font](#) [FL_TIMES](#) = 8
Times roman.
 - const [Fl_Font](#) [FL_TIMES_BOLD](#) = 9
Times roman bold.
 - const [Fl_Font](#) [FL_TIMES_BOLD_ITALIC](#) = 11
Times roman bold-italic.
 - const [Fl_Font](#) [FL_TIMES_ITALIC](#) = 10
Times roman italic.
 - const [Fl_Font](#) [FL_ZAPF_DINGBATS](#) = 15
Zapf-dingbats font.

10.3.1 Detailed Description

This file contains type definitions and general enumerations.

10.3.2 Macro Definition Documentation

10.3.2.1 FL_ABI_VERSION

```
#define FL_ABI_VERSION FL\_API\_VERSION
```

The FLTK ABI (Application Binary Interface) version number as an *int*.

[FL_ABI_VERSION](#) is an *int* that describes the major, minor, and patch ABI version numbers in the same format as [FL_API_VERSION](#).

The ABI version number [FL_ABI_VERSION](#) is usually the same as the API version [FL_API_VERSION](#) with the last two digits set to '00'.

FLTK retains the ABI (Application Binary Interface) during patch releases of the same major and minor versions. Examples:

FLTK Version	FL_API_VERSION	FL_ABI_VERSION	FL_VERSION (deprecated)
1.3.0	10300	10300	1.0300
1.3.4	10304	10300	1.0304

Version 1.2.3 is actually stored as 10203 to allow for more than 9 minor and patch releases.

The `FL_MAJOR_VERSION`, `FL_MINOR_VERSION`, and `FL_PATCH_VERSION` constants give the integral values for the major, minor, and patch releases respectively.

To enable new ABI-breaking features in patch releases you can configure FLTK to use a higher `FL_ABI_VERSION`.

See also

`README.abi-version.txt`

10.3.2.2 FL_API_VERSION

```
#define FL_API_VERSION (FL_MAJOR_VERSION*10000 + FL_MINOR_VERSION*100 + FL_PATCH_VERSION)
```

The FLTK API version number as an *int*.

`FL_API_VERSION` is an *int* that describes the major, minor, and patch version numbers.

Version 1.2.3 is actually stored as 10203 to allow for more than 9 minor and patch releases.

The `FL_MAJOR_VERSION`, `FL_MINOR_VERSION`, and `FL_PATCH_VERSION` constants give the integral values for the major, minor, and patch releases respectively.

Note

`FL_API_VERSION` is intended to replace the deprecated *double* `FL_VERSION`.

See also

[Fl::api_version\(\)](#)

10.3.2.3 FL_MAJOR_VERSION

```
#define FL_MAJOR_VERSION 1
```

The major release version of this FLTK library.

See also

[FL_VERSION](#)

10.3.2.4 FL_MINOR_VERSION

```
#define FL_MINOR_VERSION 3
```

The minor release version for this library.

FLTK remains mostly source-code compatible between minor version changes.

10.3.2.5 FL_PATCH_VERSION

```
#define FL_PATCH_VERSION 9
```

The patch version for this library.

FLTK remains binary compatible between patches.

10.3.2.6 FL_VERSION

```
#define FL_VERSION
```

Value:

```
( (double)FL_MAJOR_VERSION + \
  (double)FL_MINOR_VERSION * 0.01 + \
  (double)FL_PATCH_VERSION * 0.0001 )
```

The FLTK version number as a *double*.

`FL_VERSION` is a *double* that describes the major, minor, and patch version numbers.

Version 1.2.3 is actually stored as 1.0203 to allow for more than 9 minor and patch releases.

Deprecated This *double* version number is retained for compatibility with existing program code. New code should use *int* `FL_API_VERSION` instead. `FL_VERSION` is deprecated because comparisons of floating point values may fail due to rounding errors. However, there are currently no plans to remove this deprecated constant.

`FL_VERSION` is equivalent to $(double)FL_API_VERSION / 10000$.

10.3.3 Typedef Documentation

10.3.3.1 Fl_Fontsize

```
typedef int Fl_Fontsize
```

Size of a font in pixels.

This is the approximate height of a font in pixels.

10.3.4 Enumeration Type Documentation

10.3.4.1 anonymous enum

```
anonymous enum
```

FD "when" conditions.

Enumerator

FL_READ	Call the callback when there is data to be read.
FL_WRITE	Call the callback when data can be written without blocking.
FL_EXCEPT	Call the callback if an exception occurs on the file.

10.3.4.2 Fl_Boxtype

```
enum Fl_Boxtype
```

Enumerator

FL_NO_BOX	nothing is drawn at all, this box is invisible
FL_FLAT_BOX	a flat box
FL_UP_BOX	see figure 1
FL_DOWN_BOX	see figure 1
FL_UP_FRAME	see figure 1
FL_DOWN_FRAME	see figure 1

<code>FL_FREE_BOXTYPE</code>	the first free box type for creation of new box types

10.3.4.3 Fl_Cursor

enum `Fl_Cursor`

The following constants define the mouse cursors that are available in FLTK.

Cursors are provided by the system when available, or bitmaps built into FLTK as a fallback.

Todo enum `Fl_Cursor` needs maybe an image.

Enumerator

FL_CURSOR_DEFAULT	the default cursor, usually an arrow.
FL_CURSOR_ARROW	an arrow pointer.
FL_CURSOR_CROSS	crosshair.
FL_CURSOR_WAIT	busy indicator (e.g. hourglass).
FL_CURSOR_INSERT	I-beam.
FL_CURSOR_HAND	pointing hand.
FL_CURSOR_HELP	question mark pointer.
FL_CURSOR_MOVE	4-pointed arrow or hand.
FL_CURSOR_NS	up/down resize.
FL_CURSOR_WE	left/right resize.
FL_CURSOR_NWSE	diagonal resize.
FL_CURSOR_NESW	diagonal resize.
FL_CURSOR_N	upwards resize.
FL_CURSOR_NE	upwards, right resize.
FL_CURSOR_E	rightwards resize.
FL_CURSOR_SE	downwards, right resize.
FL_CURSOR_S	downwards resize.
FL_CURSOR_SW	downwards, left resize.
FL_CURSOR_W	leftwards resize.
FL_CURSOR_NW	upwards, left resize.
FL_CURSOR_NONE	invisible.

10.3.4.4 FI_Damageenum [Fl_Damage](#)

Damage masks.

Enumerator

FL_DAMAGE_CHILD	A child needs to be redrawn.
FL_DAMAGE_EXPOSE	The window was exposed.
FL_DAMAGE_SCROLL	The Fl_Scroll widget was scrolled.
FL_DAMAGE_OVERLAY	The overlay planes need to be redrawn.
FL_DAMAGE_USER1	First user-defined damage bit.
FL_DAMAGE_USER2	Second user-defined damage bit.
FL_DAMAGE_ALL	Everything needs to be redrawn.

10.3.4.5 FI_Eventenum [Fl_Event](#)

Every time a user moves the mouse pointer, clicks a button, or presses a key, an event is generated and sent to your application.

Events can also come from other programs like the window manager.

Events are identified by the integer argument passed to the [Fl_Widget::handle\(\)](#) virtual method. Other information about the most recent event is stored in static locations and acquired by calling the `Fl::event_*` methods. This static information remains valid until the next event is read from the window system, so it is ok to look at it outside of the `handle()` method.

Event numbers can be converted to their actual names using the `fl_eventnames[]` array defined in `#include <FL/names.h>`

See also

[Fl::event_text\(\)](#), [Fl::event_key\(\)](#), class [Fl::](#)

Enumerator

FL_NO_EVENT	No event.
FL_PUSH	<p>A mouse button has gone down with the mouse pointing at this widget. You can find out what button by calling Fl::event_button(). You find out the mouse position by calling Fl::event_x() and Fl::event_y().</p> <p>A widget indicates that it "wants" the mouse click by returning non-zero from its Fl_Widget::handle() method. It will then become the Fl::pushed() widget and will get FL_DRAG and the matching FL_RELEASE events.</p> <p>If Fl_Widget::handle() returns zero then FLTK will try sending the FL_PUSH to another widget.</p>
FL_RELEASE	<p>A mouse button has been released. You can find out what button by calling Fl::event_button().</p> <p>In order to receive the FL_RELEASE event, the widget must return non-zero when handling FL_PUSH.</p>
FL_ENTER	<p>The mouse has been moved to point at this widget. This can be used for highlighting feedback. If a widget wants to highlight or otherwise track the mouse, it indicates this by returning non-zero from its handle() method. It then becomes the Fl::belowmouse() widget and will receive FL_MOVE and FL_LEAVE events.</p>
FL_LEAVE	<p>The mouse has moved out of the widget. In order to receive the FL_LEAVE event, the widget must return non-zero when handling FL_ENTER.</p>
FL_DRAG	<p>The mouse has moved with a button held down. The current button state is in Fl::event_state(). The mouse position is in Fl::event_x() and Fl::event_y().</p> <p>In order to receive FL_DRAG events, the widget must return non-zero when handling FL_PUSH.</p>
FL_FOCUS	<p>This indicates an <i>attempt</i> to give a widget the keyboard focus. If a widget wants the focus, it should change itself to display the fact that it has the focus, and return non-zero from its handle() method. It then becomes the Fl::focus() widget and gets FL_KEYDOWN, FL_KEYUP, and FL_UNFOCUS events. The focus will change either because the window manager changed which window gets the focus, or because the user tried to navigate using tab, arrows, or other keys. You can check Fl::event_key() to figure out why it moved. For navigation it will be the key pressed and for interaction with the window manager it will be zero.</p>
FL_UNFOCUS	<p>This event is sent to the previous Fl::focus() widget when another widget gets the focus or the window loses focus.</p>

Enumerator

FL_KEYDOWN	<p>A key was pressed (FL_KEYDOWN) or released (FL_KEYUP). FL_KEYBOARD is a synonym for FL_KEYDOWN. The key can be found in Fl::event_key(). The text that the key should insert can be found with Fl::event_text() and its length is in Fl::event_length(). If you use the key handle() should return 1. If you return zero then FLTK assumes you ignored the key and will then attempt to send it to a parent widget. If none of them want it, it will change the event into a FL_SHORTCUT event.</p> <p>To receive FL_KEYBOARD events you must also respond to the FL_FOCUS and FL_UNFOCUS events.</p> <p>If you are writing a text-editing widget you may also want to call the Fl::compose() function to translate individual keystrokes into non-ASCII characters.</p> <p>FL_KEYUP events are sent to the widget that currently has focus. This is not necessarily the same widget that received the corresponding FL_KEYDOWN event because focus may have changed between events.</p>
FL_KEYBOARD	<p>Equivalent to FL_KEYDOWN.</p> <p>See also</p> <p>FL_KEYDOWN</p>
FL_KEYUP	<p>Key release event.</p> <p>See also</p> <p>FL_KEYDOWN</p>
FL_CLOSE	<p>The user clicked the close button of a window. This event is used internally only to trigger the callback of Fl_Window derived classed. The default callback closes the window calling Fl_Window::hide().</p>
FL_MOVE	<p>The mouse has moved without any mouse buttons held down. This event is sent to the Fl::belowmouse() widget. In order to receive FL_MOVE events, the widget must return non-zero when handling FL_ENTER.</p>
FL_SHORTCUT	<p>If the Fl::focus() widget is zero or ignores an FL_KEYBOARD event then FLTK tries sending this event to every widget it can, until one of them returns non-zero. FL_SHORTCUT is first sent to the Fl::belowmouse() widget, then its parents and siblings, and eventually to every widget in the window, trying to find an object that returns non-zero. FLTK tries really hard to not to ignore any keystrokes!</p> <p>You can also make "global" shortcuts by using Fl::add_handler(). A global shortcut will work no matter what windows are displayed or which one has the focus.</p>
FL_DEACTIVATE	<p>This widget is no longer active, due to Fl_Widget::deactivate() being called on it or one of its parents. Fl_Widget::active() may still be true after this, the widget is only active if Fl_Widget::active() is true on it and all its parents (use Fl_Widget::active_r() to check this).</p>
FL_ACTIVATE	<p>This widget is now active, due to Fl_Widget::activate() being called on it or one of its parents.</p>

Enumerator

FL_HIDE	This widget is no longer visible, due to <code>Fl_Widget::hide()</code> being called on it or one of its parents, or due to a parent window being minimized. <code>Fl_Widget::visible()</code> may still be true after this, but the widget is visible only if <code>visible()</code> is true for it and all its parents (use <code>Fl_Widget::visible_r()</code> to check this).
FL_SHOW	This widget is visible again, due to <code>Fl_Widget::show()</code> being called on it or one of its parents, or due to a parent window being restored. Child <code>Fl_Windows</code> respond to this by actually creating the window if not done already, so if you subclass a window, be sure to pass <code>FL_SHOW</code> to the base class <code>Fl_Widget::handle()</code> method!
FL_PASTE	You should get this event some time after you call <code>Fl::paste()</code> . The contents of <code>Fl::event_text()</code> is the text to insert and the number of characters is in <code>Fl::event_length()</code> .
FL_SELECTIONCLEAR	The <code>Fl::selection_owner()</code> will get this event before the selection is moved to another widget. This indicates that some other widget or program has claimed the selection. Motif programs used this to clear the selection indication. Most modern programs ignore this.
FL_MOUSEWHEEL	The user has moved the mouse wheel. The <code>Fl::event_dx()</code> and <code>Fl::event_dy()</code> methods can be used to find the amount to scroll horizontally and vertically.
FL_DND_ENTER	The mouse has been moved to point at this widget. A widget that is interested in receiving drag'n'drop data must return 1 to receive <code>FL_DND_DRAG</code> , <code>FL_DND_LEAVE</code> and <code>FL_DND_RELEASE</code> events.
FL_DND_DRAG	The mouse has been moved inside a widget while dragging data. A widget that is interested in receiving drag'n'drop data should indicate the possible drop position.
FL_DND_LEAVE	The mouse has moved out of the widget.
FL_DND_RELEASE	The user has released the mouse button dropping data into the widget. If the widget returns 1, it will receive the data in the immediately following <code>FL_PASTE</code> event.
FL_SCREEN_CONFIGURATION_CHANGED	The screen configuration (number, positions) was changed. Use <code>Fl::add_handler()</code> to be notified of this event.
FL_FULLSCREEN	The fullscreen state of the window has changed.
FL_ZOOM_GESTURE	The user has made a zoom/pinch/magnification gesture. The <code>Fl::event_dy()</code> method can be used to find magnification amount, <code>Fl::event_x()</code> and <code>Fl::event_y()</code> are set as well.

10.3.4.6 Fl_Labeltype

enum `Fl_Labeltype`

The `labeltype()` method sets the type of the label.

The following standard label types are included:

Todo The doxygen comments are incomplete, and some labeltypes start with an underscore. Also, there are three external functions undocumented (yet):

- `fl_define_FL_SHADOW_LABEL()`
- `fl_define_FL_ENGRAVED_LABEL()`
- `fl_define_FL_EMBOSSED_LABEL()`

Enumerator

FL_NORMAL_LABEL	draws the text (0)
FL_NO_LABEL	does nothing
_FL_SHADOW_LABEL	draws a drop shadow under the text
_FL_ENGRAVED_LABEL	draws edges as though the text is engraved
_FL_EMBOSSSED_LABEL	draws edges as though the text is raised
_FL_MULTI_LABEL	draws a composite label See also Fl_Multi_Label
_FL_ICON_LABEL	draws the icon associated with the text
_FL_IMAGE_LABEL	the label displays an "icon" based on a Fl_Image
FL_FREE_LABELTYPE	first free labeltype to use for creating own labeltypes

10.3.4.7 Fl_When

```
enum Fl_When
```

These constants determine when a callback is performed.

See also

[Fl_Widget::when\(\);](#)

Todo doxygen comments for values are incomplete and maybe wrong or unclear

Enumerator

FL_WHEN_NEVER	Never call the callback.
FL_WHEN_CHANGED	Do the callback only when the widget value changes.
FL_WHEN_NOT_CHANGED	Do the callback whenever the user interacts with the widget.
FL_WHEN_RELEASE	Do the callback when the button or key is released and the value changes.
FL_WHEN_RELEASE_ALWAYS	Do the callback when the button or key is released, even if the value doesn't change.
FL_WHEN_ENTER_KEY	Do the callback when the user presses the ENTER key and the value changes.
FL_WHEN_ENTER_KEY_ALWAYS	Do the callback when the user presses the ENTER key, even if the value doesn't change.
FL_WHEN_ENTER_KEY_CHANGED	?

10.3.5 Function Documentation**10.3.5.1 fl_box()**

```
Fl_Boxtype fl_box (
    Fl_Boxtype b ) [inline]
```

Get the filled version of a frame.

If no filled version of a given frame exists, the behavior of this function is undefined and some random box or frame is returned.

10.3.5.2 fl_color_cube()

```
Fl_Color fl_color_cube (
    int r,
    int g,
    int b ) [inline]
```

Returns a color out of the color cube.

`r` must be in the range 0 to `FL_NUM_RED` (5) minus 1, `g` must be in the range 0 to `FL_NUM_GREEN` (8) minus 1, `b` must be in the range 0 to `FL_NUM_BLUE` (5) minus 1.

To get the closest color to a 8-bit set of R,G,B values use:

```
fl_color_cube(R * (FL_NUM_RED - 1) / 255,
             G * (FL_NUM_GREEN - 1) / 255,
             B * (FL_NUM_BLUE - 1) / 255);
```

10.3.5.3 fl_down()

```
Fl_Boxtype fl_down (
    Fl_Boxtype b ) [inline]
```

Get the "pressed" or "down" version of a box.

If no "down" version of a given box exists, the behavior of this function is undefined and some random box or frame is returned.

10.3.5.4 fl_frame()

```
Fl_Boxtype fl_frame (
    Fl_Boxtype b ) [inline]
```

Get the unfilled, frame only version of a box.

If no frame version of a given box exists, the behavior of this function is undefined and some random box or frame is returned.

10.3.5.5 fl_gray_ramp()

```
Fl_Color fl_gray_ramp (
    int i ) [inline]
```

Returns a gray color value from black (`i == 0`) to white (`i == FL_NUM_GRAY - 1`).

`FL_NUM_GRAY` is defined to be 24 in the current FLTK release. To get the closest FLTK gray value to an 8-bit grayscale color 'I' use:

```
fl_gray_ramp(I * (FL_NUM_GRAY - 1) / 255)
```

10.3.6 Variable Documentation

10.3.6.1 FL_ALIGN_LEFT

```
const Fl_Align FL_ALIGN_LEFT = (Fl_Align)4
```

Align the label at the left of the widget.

Inside labels appear left-justified starting at the left side of the widget, outside labels are right-justified and drawn to the left of the widget.

10.3.6.2 FL_ALIGN_TOP

```
const Fl_Align FL_ALIGN_TOP = (Fl_Align)1
```

Align the label at the top of the widget.

Inside labels appear below the top, outside labels are drawn on top of the widget.

10.3.6.3 FL_NORMAL_SIZE

```
FL_EXPORT Fl_Fontsize FL_NORMAL_SIZE [extern]
```

normal font size

normal font size

10.5 filename.H File Reference

File names and URI utility functions.

```

#include "Fl_Export.H"
#include <sys/types.h>
#include <dirent.h>

```

Macros

- #define **fl_dirent_h_cyclic_include**
- #define **FL_FILENAME_H**
- #define **FL_PATH_MAX** 2048
all path buffers should use this length

Typedefs

- typedef int() **Fl_File_Sort_F**(struct dirent **, struct dirent **)
File sorting function.

Functions

- FL_EXPORT void **fl_decode_uri** (char *uri)
Decodes a URL-encoded string.
- FL_EXPORT int **fl_filename_absolute** (char *to, int tolen, const char *from)
Makes a filename absolute from a relative filename.
- FL_EXPORT int **fl_filename_expand** (char *to, int tolen, const char *from)
Expands a filename containing shell variables and tilde (~).
- FL_EXPORT const char * **fl_filename_ext** (const char *buf)
Gets the extensions of a filename.
- FL_EXPORT void **fl_filename_free_list** (struct dirent ***l, int n)
Free the list of filenames that is generated by fl_filename_list().
- FL_EXPORT int **fl_filename_isdir** (const char *name)
Determines if a file exists and is a directory from its filename.
- FL_EXPORT int **fl_filename_list** (const char *d, struct dirent ***l, **Fl_File_Sort_F** *s=fl_numeric_sort)

- *Portable and const-correct wrapper for the scandir() function.*
- FL_EXPORT int `fl_filename_match` (const char *name, const char *pattern)
Checks if a string s matches a pattern p.
- FL_EXPORT const char * `fl_filename_name` (const char *filename)
Gets the file name from a path.
- FL_EXPORT int `fl_filename_relative` (char *to, int tolen, const char *from)
Makes a filename relative to the current working directory.
- FL_EXPORT char * `fl_filename_setext` (char *to, int tolen, const char *ext)
Replaces the extension in buf of max.
- FL_EXPORT int `fl_open_uri` (const char *uri, char *msg, int msglen)
Opens the specified Uniform Resource Identifier (URI).

10.5.1 Detailed Description

File names and URI utility functions.

10.7 Fl.H File Reference

Fl static class.

```

#include <FL/Fl_Export.H>
#include <FL/Fl_Cairo.H>
#include "fl_utf8.h"
#include "Enumerations.H"

```

Classes

- class [Fl](#)

The [Fl](#) is the FLTK global (static) class containing state information and global methods for the current application.

- class [Fl_Widget_Tracker](#)

This class should be used to control safe widget deletion.

Macros

- #define [FL_Object](#) [Fl_Widget](#)
for back compatibility - use [Fl_Widget](#)!
- #define [FL_SOCKET](#) int

Typedefs

- typedef void(* [Fl_Abort_Handler](#)) (const char *format,...)
Signature of set_abort functions passed as parameters.
- typedef int(* [Fl_Args_Handler](#)) (int argc, char **argv, int &i)
Signature of args functions passed as parameters.
- typedef void(* [Fl_Atclose_Handler](#)) ([Fl_Window](#) *window, void *data)
Signature of set_atclose functions passed as parameters.
- typedef void(* [Fl_Awake_Handler](#)) (void *data)
Signature of some wakeup callback functions passed as parameters.
- typedef void() [Fl_Box_Draw_F](#)(int x, int y, int w, int h, [Fl_Color](#) color)
Signature of some box drawing functions passed as parameters.
- typedef void(* [Fl_Clipboard_Notify_Handler](#)) (int source, void *data)
Signature of add_clipboard_notify functions passed as parameters.
- typedef int(* [Fl_Event_Dispatch](#)) (int event, [Fl_Window](#) *w)
Signature of event_dispatch functions passed as parameters.
- typedef int(* [Fl_Event_Handler](#)) (int event)
Signature of add_handler functions passed as parameters.
- typedef void(* [Fl_FD_Handler](#)) ([FL_SOCKET](#) fd, void *data)
Signature of add_fd functions passed as parameters.
- typedef void(* [Fl_Idle_Handler](#)) (void *data)
Signature of add_idle callback functions passed as parameters.
- typedef void() [Fl_Label_Draw_F](#)(const [Fl_Label](#) *label, int x, int y, int w, int h, [Fl_Align](#) align)

Signature of some label drawing functions passed as parameters.

- typedef void() **FI_Label_Measure_F**(const **FI_Label** *label, int &width, int &height)

Signature of some label measurement functions passed as parameters.

- typedef void(* **FI_Old_Idle_Handler**) ()

Signature of set_idle callback functions passed as parameters.

- typedef int(* **FI_System_Handler**) (void *event, void *data)

Signature of add_system_handler functions passed as parameters.

- typedef void(* **FI_Timeout_Handler**) (void *data)

Signature of some timeout callback functions passed as parameters.

Variables

- **FL_EXPORT** const char * **fl_local_alt**
string pointer used in shortcuts, you can change it to another language
- **FL_EXPORT** const char * **fl_local_ctrl**
string pointer used in shortcuts, you can change it to another language
- **FL_EXPORT** const char * **fl_local_meta**
string pointer used in shortcuts, you can change it to another language
- **FL_EXPORT** const char * **fl_local_shift**
string pointer used in shortcuts, you can change it to another language

10.7.1 Detailed Description

FI static class.

10.10 fl_ask.H File Reference

API for common dialogs.

```
#include "Enumerations.H"
```

Macros

- #define `__fl_attr(x)`

Enumerations

- enum `FL_Beep` {
`FL_BEEP_DEFAULT = 0`, `FL_BEEP_MESSAGE`, `FL_BEEP_ERROR`, `FL_BEEP_QUESTION`,
`FL_BEEP_PASSWORD`, `FL_BEEP_NOTIFICATION` }

Different system beeps available.

Functions

- `FL_EXPORT void FL_EXPORT void fl_alert` (const char *,...) `__fl_attr((__format__(__printf__`
- `FL_EXPORT void FL_EXPORT void FL_EXPORT int fl_ask` (const char *,...) `__fl_attr((__format__(__↵
printf__`
- `FL_EXPORT void fl_beep` (int type=`FL_BEEP_DEFAULT`)
Emits a system beep message.
- `FL_EXPORT int fl_choice` (const char *q, const char *b0, const char *b1, const char *b2,...) `__fl_attr((__↵
format__(__printf__`
- `FL_EXPORT int FL_EXPORT const char FL_EXPORT const char FL_EXPORT int fl_choice_n` (const char
*q, const char *b0, const char *b1, const char *b2,...) `__fl_attr((__format__(__printf__`
- `FL_EXPORT int FL_EXPORT const char * fl_input` (const char *label, const char *deflt=0,...) `__fl_attr((__↵
_format__(__printf__`
- `FL_EXPORT void fl_message` (const char *,...) `__fl_attr((__format__(__printf__`
- void `fl_message_font` (`FL_Font` f, `FL_Fontsize` s)
- `FL_EXPORT void fl_message_hotspot` (int enable)
*Sets whether or not to move the common message box used in many common dialogs like `fl_message()`, `fl_alert()`,
`fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()` to follow the mouse pointer.*
- `FL_EXPORT int fl_message_hotspot` (void)
*Gets whether or not to move the common message box used in many common dialogs like `fl_message()`, `fl_alert()`,
`fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()` to follow the mouse pointer.*
- `FL_EXPORT int FL_EXPORT const char FL_EXPORT const char FL_EXPORT int FL_EXPORT FL_Widget`
* `fl_message_icon` ()
*Gets the `FL_Box` icon container of the current default dialog used in many common dialogs like `fl_message()`, `fl_alert()`,
`fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()`*
- `FL_EXPORT void fl_message_title` (const char *title)
Sets the title of the dialog window used in many common dialogs.
- `FL_EXPORT void fl_message_title_default` (const char *title)
Sets the default title of the dialog window used in many common dialogs.
- `FL_EXPORT int FL_EXPORT const char FL_EXPORT const char * fl_password` (const char *label, const
char *deflt=0,...) `__fl_attr((__format__(__printf__`

Variables

- `FL_EXPORT void FL_EXPORT void FL_EXPORT int __deprecated__`
- `FL_EXPORT const char * fl_cancel`
string pointer used in common dialogs, you can change it to another language
- `FL_EXPORT const char * fl_close`
string pointer used in common dialogs, you can change it to another language
- `FL_EXPORT FL_Font fl_message_font_`
- `FL_EXPORT FL_Fontsize fl_message_size_`
- `FL_EXPORT const char * fl_no`
string pointer used in common dialogs, you can change it to another language
- `FL_EXPORT const char * fl_ok`

string pointer used in common dialogs, you can change it to another language

- `FL_EXPORT` const char * **fl_yes**

string pointer used in common dialogs, you can change it to another language

10.10.1 Detailed Description

API for common dialogs.

10.10.2 Enumeration Type Documentation

10.10.2.1 Fl_Beep

enum `Fl_Beep`

Different system beeps available.

See also

[fl_beep\(int\)](#)

Enumerator

<code>FL_BEEP_DEFAULT</code>	Default beep.
<code>FL_BEEP_MESSAGE</code>	Message beep.
<code>FL_BEEP_ERROR</code>	Error beep.
<code>FL_BEEP_QUESTION</code>	Question beep.
<code>FL_BEEP_PASSWORD</code>	Password beep.
<code>FL_BEEP_NOTIFICATION</code>	Notification beep.

10.11 fl_ask.H

10.29 FI_Device.H File Reference

declaration of classes [Fl_Device](#), [Fl_Graphics_Driver](#), [Fl_Surface_Device](#), [Fl_Display_Device](#), [Fl_Device_Plugin](#).

```

#include <FL/x.H>
#include <FL/Fl_Plugin.H>
#include <FL/Fl_Image.H>
#include <FL/Fl_Bitmap.H>
#include <FL/Fl_Pixmap.H>
#include <FL/Fl_RGB_Image.H>
#include <stdlib.h>

```

Classes

- class [Fl_Device](#)
All graphical output devices and all graphics systems.
- class [Fl_Device_Plugin](#)
This plugin socket allows the integration of new device drivers for special window or screen types.
- class [Fl_Display_Device](#)
A display to which the computer can draw.
- class [Fl_GDI_Graphics_Driver](#)
The MSWindows-specific graphics class.
- class [Fl_GDI_Printer_Graphics_Driver](#)
The graphics driver used when printing on MSWindows.
- class [Fl_Graphics_Driver](#)
A virtual class subclassed for each graphics driver FLTK uses.
- class [Fl_Quartz_Graphics_Driver](#)
The Mac OS X-specific graphics class.
- class [Fl_Surface_Device](#)
A drawing surface that's susceptible to receive graphical output.
- class [Fl_Xlib_Graphics_Driver](#)
The Xlib-specific graphics class.
- struct [Fl_Graphics_Driver::matrix](#)
A 2D coordinate transformation matrix.

Macros

- #define [FL_MATRIX_STACK_SIZE](#) 32
- #define [FL_REGION_STACK_SIZE](#) 10
- #define [XPOINT](#) XPoint

Typedefs

- typedef short [COORD_T](#)
- typedef void(* [Fl_Draw_Image_Cb](#)) (void *data, int x, int y, int w, [uchar](#) *buf)
signature of image generation callback function.

Variables

- `FL_EXPORT Fl_Graphics_Driver * fl_graphics_driver`
Points to the driver that currently receives all graphics requests.

10.29.1 Detailed Description

declaration of classes `Fl_Device`, `Fl_Graphics_Driver`, `Fl_Surface_Device`, `Fl_Display_Device`, `Fl_Device_Plugin`.

10.29.2 Typedef Documentation**10.29.2.1 Fl_Draw_Image_Cb**

typedef void(* Fl_Draw_Image_Cb) (void *data, int x, int y, int w, uchar *buf)
signature of image generation callback function.

Parameters

in	<i>data</i>	user data passed to function
in	<i>x,y,w</i>	position and width of scan line in image
out	<i>buf</i>	buffer for generated image data. You must copy <i>w</i> pixels from scanline <i>y</i> , starting at pixel <i>x</i> to this buffer.

10.33 fl_draw.H File Reference

utility header to pull drawing functions together

```

#include <FL/x.H>
#include <FL/Enumerations.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Device.H>

```

Macros

- #define `fl_clip fl_push_clip`

Intersects the current clip region with a rectangle and pushes this new region onto the stack (deprecated).

Enumerations

- enum {
FL_SOLID = 0 , **FL_DASH** = 1 , **FL_DOT** = 2 , **FL_DASHDOT** = 3 ,
FL_DASHDOTDOT = 4 , **FL_CAP_FLAT** = 0x100 , **FL_CAP_ROUND** = 0x200 , **FL_CAP_SQUARE** = 0x300 ,
FL_JOIN_MITER = 0x1000 , **FL_JOIN_ROUND** = 0x2000 , **FL_JOIN_BEVEL** = 0x3000 }

Functions

- FL_EXPORT int **fl_add_symbol** (const char *name, void(*drawit)(**FL_Color**), int scalable)
Adds a symbol to the system.
- void **fl_arc** (double x, double y, double r, double start, double end)
Adds a series of points to the current path on the arc of a circle.
- void **fl_arc** (int x, int y, int w, int h, double a1, double a2)
Draw ellipse sections using integer coordinates.
- void **fl_begin_complex_polygon** ()
Starts drawing a complex filled polygon.
- void **fl_begin_line** ()
Starts drawing a list of lines.
- void **fl_begin_loop** ()
Starts drawing a closed sequence of lines.
- void **fl_begin_points** ()
Starts drawing a list of points.
- void **fl_begin_polygon** ()
Starts drawing a convex filled polygon.
- FL_EXPORT char **fl_can_do_alpha_blending** ()
Checks whether platform supports true alpha blending for RGBA images.
- FL_EXPORT void **fl_chord** (int x, int y, int w, int h, double a1, double a2)
fl_chord declaration is a place holder - the function does not yet exist
- void **fl_circle** (double x, double y, double r)
fl_circle() is equivalent to fl_arc(x,y,r,0,360), but may be faster.
- int **fl_clip_box** (int x, int y, int w, int h, int &X, int &Y, int &W, int &H)
Intersects the rectangle with the current clip region and returns the bounding box of the result.
- FI_Region **fl_clip_region** ()
Returns the current clipping region.
- void **fl_clip_region** (FI_Region r)
Replaces the top of the clipping stack with a clipping region of any shape.
- FL_Color** **fl_color** ()
Returns the last fl_color() that was set.
- void **fl_color** (**FL_Color** c)
Sets the color for all subsequent drawing operations.
- void **fl_color** (int c)
for back compatibility - use fl_color(FL_Color c) instead
- void **fl_color** (uchar r, uchar g, uchar b)
Sets the color for all subsequent drawing operations.
- FL_EXPORT void **fl_cursor** (**FI_Cursor**)
Sets the cursor for the current window to the specified shape and colors.
- FL_EXPORT void **fl_cursor** (**FI_Cursor**, **FL_Color** fg, **FL_Color** bg=FL_WHITE)
- void **fl_curve** (double X0, double Y0, double X1, double Y1, double X2, double Y2, double X3, double Y3)
Adds a series of points on a Bezier curve to the path.

- **int fl_descent ()**
Returns the recommended distance above the bottom of a fl_height() tall box to draw the text at so it looks centered vertically in that box.
- **void fl_draw (const char *str, int n, int x, int y)**
Draws starting at the given x, y location a UTF-8 string of length n bytes.
- **FL_EXPORT void fl_draw (const char *str, int x, int y)**
Draws a nul-terminated UTF-8 string starting at the given x, y location.
- **FL_EXPORT void fl_draw (const char *str, int x, int y, int w, int h, FL_Align align, FL_Image *img=0, int draw←_symbols=1)**
Fancy string drawing function which is used to draw all the labels.
- **FL_EXPORT void fl_draw (const char *str, int x, int y, int w, int h, FL_Align align, void(*callthis)(const char *, int, int, int), FL_Image *img=0, int draw_symbols=1)**
The same as fl_draw(const char,int,int,int,int,FL_Align,FL_Image*,int) with the addition of the callthis parameter, which is a pointer to a text drawing function such as fl_draw(const char*, int, int, int) to do the real work.*
- **void fl_draw (int angle, const char *str, int n, int x, int y)**
Draws at the given x, y location a UTF-8 string of length n bytes rotating angle degrees counter-clockwise.
- **FL_EXPORT void fl_draw (int angle, const char *str, int x, int y)**
Draws a nul-terminated UTF-8 string starting at the given x, y location and rotating angle degrees counter-clockwise.
- **FL_EXPORT void fl_draw_box (FL_Boxtype, int x, int y, int w, int h, FL_Color)**
Draws a box using given type, position, size and color.
- **void fl_draw_image (const uchar *buf, int X, int Y, int W, int H, int D=3, int L=0)**
Draws an 8-bit per color RGB or luminance image.
- **void fl_draw_image (FL_Draw_Image_Cb cb, void *data, int X, int Y, int W, int H, int D=3)**
Draws an image using a callback function to generate image data.
- **void fl_draw_image_mono (const uchar *buf, int X, int Y, int W, int H, int D=1, int L=0)**
Draws a gray-scale (1 channel) image.
- **void fl_draw_image_mono (FL_Draw_Image_Cb cb, void *data, int X, int Y, int W, int H, int D=1)**
Draws a gray-scale image using a callback function to generate image data.
- **FL_EXPORT int fl_draw_pixmap (char *const *data, int x, int y, FL_Color=FL_GRAY)**
Draw XPM image data, with the top-left corner at the given position.
- **FL_EXPORT int fl_draw_pixmap (const char *const *cdata, int x, int y, FL_Color=FL_GRAY)**
Draw XPM image data, with the top-left corner at the given position.
- **FL_EXPORT int fl_draw_symbol (const char *label, int x, int y, int w, int h, FL_Color)**
Draw the named symbol in the given rectangle using the given color.
- **void fl_end_complex_polygon ()**
Ends complex filled polygon, and draws.
- **void fl_end_line ()**
Ends list of lines, and draws.
- **void fl_end_loop ()**
Ends closed sequence of lines, and draws.
- **void fl_end_points ()**
Ends list of points, and draws.
- **void fl_end_polygon ()**
Ends convex filled polygon, and draws.
- **FL_EXPORT const char * fl_expand_text (const char *from, char *buf, int maxbuf, double maxw, int &n, double &width, int wrap, int draw_symbols=0)**
Copy from to buf, replacing control characters with ^X.
- **FL_Font fl_font ()**
Returns the face set by the most recent call to fl_font().
- **void fl_font (FL_Font face, FL_Fontsize fsize)**
Sets the current font, which is then used in various drawing routines.

- FL_EXPORT void [fl_frame](#) (const char *s, int x, int y, int w, int h)
Draws a series of line segments around the given box.
- FL_EXPORT void [fl_frame2](#) (const char *s, int x, int y, int w, int h)
Draws a series of line segments around the given box.
- void [fl_gap](#) ()
Call [fl_gap\(\)](#) to separate loops of the path.
- int [fl_height](#) ()
Returns the recommended minimum line spacing for the current font.
- FL_EXPORT int [fl_height](#) (int font, int size)
This function returns the actual height of the specified font and size.
- FL_EXPORT const char * [fl_latin1_to_local](#) (const char *t, int n=-1)
Converts text from Windows/X11 latin1 character set to local encoding.
- void [fl_line](#) (int x, int y, int x1, int y1)
Draws a line from (x,y) to (x1,y1)
- void [fl_line](#) (int x, int y, int x1, int y1, int x2, int y2)
Draws a line from (x,y) to (x1,y1) and another from (x1,y1) to (x2,y2)
- void [fl_line_style](#) (int style, int width=0, char *dashes=0)
Sets how to draw lines (the "pen").
- FL_EXPORT const char * [fl_local_to_latin1](#) (const char *t, int n=-1)
Converts text from local encoding to Windows/X11 latin1 character set.
- FL_EXPORT const char * [fl_local_to_mac_roman](#) (const char *t, int n=-1)
Converts text from local encoding to Mac Roman character set.
- void [fl_loop](#) (int x, int y, int x1, int y1, int x2, int y2)
Outlines a 3-sided polygon with lines.
- void [fl_loop](#) (int x, int y, int x1, int y1, int x2, int y2, int x3, int y3)
Outlines a 4-sided polygon with lines.
- FL_EXPORT const char * [fl_mac_roman_to_local](#) (const char *t, int n=-1)
Converts text from Mac Roman character set to local encoding.
- FL_EXPORT void [fl_measure](#) (const char *str, int &x, int &y, int draw_symbols=1)
*Measure how wide and tall the string will be when printed by the [fl_draw\(\)](#) function with *align* parameter.*
- FL_EXPORT int [fl_measure_pixmap](#) (char *const *data, int &w, int &h)
Get the dimensions of a pixmap.
- FL_EXPORT int [fl_measure_pixmap](#) (const char *const *cdata, int &w, int &h)
Get the dimensions of a pixmap.
- void [fl_mult_matrix](#) (double a, double b, double c, double d, double x, double y)
Concatenates another transformation onto the current one.
- int [fl_not_clipped](#) (int x, int y, int w, int h)
Does the rectangle intersect the current clip region?
- FL_EXPORT unsigned int [fl_old_shortcut](#) (const char *s)
Emulation of XForms named shortcuts.
- FL_EXPORT void [fl_overlay_clear](#) ()
Erase a selection rectangle without drawing a new one.
- FL_EXPORT void [fl_overlay_rect](#) (int x, int y, int w, int h)
Draws a selection rectangle, erasing a previous one by XOR'ing it first.
- void [fl_pie](#) (int x, int y, int w, int h, double a1, double a2)
Draw filled ellipse sections using integer coordinates.
- void [fl_point](#) (int x, int y)
Draws a single pixel at the given coordinates.
- void [fl_polygon](#) (int x, int y, int x1, int y1, int x2, int y2)
Fills a 3-sided polygon.
- void [fl_polygon](#) (int x, int y, int x1, int y1, int x2, int y2, int x3, int y3)

- Fills a 4-sided polygon.*

 - void `fl_pop_clip` ()

Restores the previous clip region.
- void `fl_pop_matrix` ()

Restores the current transformation matrix from the stack.
- void `fl_push_clip` (int x, int y, int w, int h)

Intersects the current clip region with a rectangle and pushes this new region onto the stack.
- void `fl_push_matrix` ()

Saves the current transformation matrix on the stack.
- void `fl_push_no_clip` ()

Pushes an empty clip region onto the stack so nothing will be clipped.
- FL_EXPORT `uchar * fl_read_image` (`uchar *p`, int X, int Y, int W, int H, int alpha=0)

Reads an RGB(A) image from the current window or off-screen buffer.
- void `fl_rect` (int x, int y, int w, int h)

Draws a 1-pixel border inside the given bounding box.
- void `fl_rect` (int x, int y, int w, int h, `FL_Color` c)

Draws with passed color a 1-pixel border inside the given bounding box.
- void `fl_rectf` (int x, int y, int w, int h)

Colors with current color a rectangle that exactly fills the given bounding box.
- void `fl_rectf` (int x, int y, int w, int h, `FL_Color` c)

Colors with passed color a rectangle that exactly fills the given bounding box.
- FL_EXPORT void `fl_rectf` (int x, int y, int w, int h, `uchar` r, `uchar` g, `uchar` b)

*Colors a rectangle with "exactly" the passed *r, g, b* color.*
- FL_EXPORT void `fl_reset_spot` (void)
- void `fl_restore_clip` ()

Undoes any clobbering of clip done by your program.
- void `fl_rotate` (double d)

Concatenates rotation transformation onto the current one.
- void `fl_rtl_draw` (const char *str, int n, int x, int y)

*Draws a UTF-8 string of length *n* bytes right to left starting at the given *x, y* location.*
- void `fl_scale` (double x)

Concatenates scaling transformation onto the current one.
- void `fl_scale` (double x, double y)

Concatenates scaling transformation onto the current one.
- FL_EXPORT void `fl_scroll` (int X, int Y, int W, int H, int dx, int dy, void(*draw_area)(void *, int, int, int, int), void *data)

Scroll a rectangle and draw the newly exposed portions.
- FL_EXPORT void `fl_set_spot` (int font, int size, int X, int Y, int W, int H, `FL_Window` *win=0)
- FL_EXPORT void `fl_set_status` (int X, int Y, int W, int H)
- FL_EXPORT const char * `fl_shortcut_label` (unsigned int shortcut)

Get a human-readable string from a shortcut value.
- FL_EXPORT const char * `fl_shortcut_label` (unsigned int shortcut, const char **eom)

Get a human-readable string from a shortcut value.
- `FL_Fontsize` `fl_size` ()

*Returns the *size* set by the most recent call to `fl_font()`.*
- FL_EXPORT void `fl_text_extents` (const char *, int &dx, int &dy, int &w, int &h)

Determines the minimum pixel dimensions of a nul-terminated string.
- void `fl_text_extents` (const char *t, int n, int &dx, int &dy, int &w, int &h)

*Determines the minimum pixel dimensions of a sequence of *n* characters.*
- double `fl_transform_dx` (double x, double y)

Transforms distance using current transformation matrix.

- double `fl_transform_dy` (double x, double y)
Transforms distance using current transformation matrix.
- double `fl_transform_x` (double x, double y)
Transforms coordinate using the current transformation matrix.
- double `fl_transform_y` (double x, double y)
Transforms coordinate using the current transformation matrix.
- void `fl_transformed_vertex` (double xf, double yf)
Adds coordinate pair to the vertex list without further transformations.
- void `fl_translate` (double x, double y)
Concatenates translation transformation onto the current one.
- void `fl_vertex` (double x, double y)
Adds a single vertex to the current path.
- FL_EXPORT double `fl_width` (const char *txt)
Returns the typographical width of a nul-terminated string using the current font face and size.
- double `fl_width` (const char *txt, int n)
Returns the typographical width of a sequence of n characters using the current font face and size.
- double `fl_width` (unsigned int c)
Returns the typographical width of a single character using the current font face and size.
- void `fl_xyline` (int x, int y, int x1)
Draws a horizontal line from (x,y) to (x1,y)
- void `fl_xyline` (int x, int y, int x1, int y2)
Draws a horizontal line from (x,y) to (x1,y), then vertical from (x1,y) to (x1,y2)
- void `fl_xyline` (int x, int y, int x1, int y2, int x3)
Draws a horizontal line from (x,y) to (x1,y), then a vertical from (x1,y) to (x1,y2) and then another horizontal from (x1,y2) to (x3,y2)
- void `fl_yxline` (int x, int y, int y1)
Draws a vertical line from (x,y) to (x,y1)
- void `fl_yxline` (int x, int y, int y1, int x2)
Draws a vertical line from (x,y) to (x,y1), then a horizontal from (x,y1) to (x2,y1)
- void `fl_yxline` (int x, int y, int y1, int x2, int y3)
Draws a vertical line from (x,y) to (x,y1) then a horizontal from (x,y1) to (x2,y1), then another vertical from (x2,y1) to (x2,y3)

Variables

- FL_EXPORT char `fl_draw_shortcut`

10.33.1 Detailed Description

utility header to pull drawing functions together

10.34 fl_draw.H

[Go to the documentation of this file.](#)

10.56 Fl_Image.H File Reference

[Fl_Image](#), [Fl_RGB_Image](#) classes.

```

#include "Enumerations.H"
#include <stdlib.h>

```

Classes

- class [Fl_Image](#)
Base class for image caching and drawing.
- class [Fl_RGB_Image](#)
The [Fl_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

Enumerations

- enum [Fl_RGB_Scaling](#) { [FL_RGB_SCALING_NEAREST](#) = 0 , [FL_RGB_SCALING_BILINEAR](#) }
The scaling algorithm to use for RGB images.

10.56.1 Detailed Description

[Fl_Image](#), [Fl_RGB_Image](#) classes.

10.56.2 Enumeration Type Documentation**10.56.2.1 Fl_RGB_Scaling**

enum [Fl_RGB_Scaling](#)

The scaling algorithm to use for RGB images.

Enumerator

FL_RGB_SCALING_NEAREST	default RGB image scaling algorithm
FL_RGB_SCALING_BILINEAR	more accurate, but slower RGB image scaling algorithm

10.57 Fl_Image.H

10.70 Fl_Menu_Item.H File Reference

```

#include "Fl_Widget.H"
#include "Fl_Image.H"

```

Classes

- struct [Fl_Menu_Item](#)

The [Fl_Menu_Item](#) structure defines a single menu item that is used by the [Fl_Menu_](#) class.

Typedefs

- typedef [Fl_Menu_Item](#) [Fl_Menu](#)

Enumerations

- enum {
 - [FL_MENU_INACTIVE](#) = 1 , [FL_MENU_TOGGLE](#) = 2 , [FL_MENU_VALUE](#) = 4 , [FL_MENU_RADIO](#) = 8 ,
 - [FL_MENU_INVISIBLE](#) = 0x10 , [FL_SUBMENU_POINTER](#) = 0x20 , [FL_SUBMENU](#) = 0x40 , [FL_MENU_DIVIDER](#) = 0x80 ,
 - [FL_MENU_HORIZONTAL](#) = 0x100 }

- enum {
 - FL_PUP_NONE = 0 , FL_PUP_GREY = FL_MENU_INACTIVE , FL_PUP_GRAY = FL_MENU_INACTIVE ,
 - FL_MENU_BOX = FL_MENU_TOGGLE ,
 - FL_PUP_BOX = FL_MENU_TOGGLE , FL_MENU_CHECK = FL_MENU_VALUE , FL_PUP_CHECK = FL_MENU_VALUE ,
 - FL_PUP_RADIO = FL_MENU_RADIO ,
 - FL_PUP_INVISIBLE = FL_MENU_INVISIBLE , FL_PUP_SUBMENU = FL_SUBMENU_POINTER }

Functions

- FL_EXPORT [Fl_Shortcut fl_old_shortcut](#) (const char *)
Emulation of XForms named shortcuts.

10.70.1 Enumeration Type Documentation

10.70.1.1 anonymous enum

anonymous enum

Enumerator

FL_MENU_INACTIVE	Deactivate menu item (gray out)
FL_MENU_TOGGLE	Item is a checkbox toggle (shows checkbox for on/off state)
FL_MENU_VALUE	The on/off state for checkbox/radio buttons (if set, state is 'on')
FL_MENU_RADIO	Item is a radio button (one checkbox of many can be on)
FL_MENU_INVISIBLE	Item will not show up (shortcut will work)
FL_SUBMENU_POINTER	Indicates user_data() is a pointer to another menu array.
FL_SUBMENU	This item is a submenu to other items.
FL_MENU_DIVIDER	Creates divider line below this item. Also ends a group of radio buttons.
FL_MENU_HORIZONTAL	??? – reserved

10.71 Fl_Menu_Item.H

10.78 Fl_Native_File_Chooser.H File Reference

[Fl_Native_File_Chooser](#) widget.

```
#include <FL/Fl_File_Chooser.H>
```

Classes

- class [Fl_FLTK_File_Chooser](#)
- class [Fl_GTK_File_Chooser](#)
- class [Fl_Native_File_Chooser](#)

This class lets an FLTK application easily and consistently access the operating system's native file chooser.

10.78.1 Detailed Description

[Fl_Native_File_Chooser](#) widget.

10.79 Fl_Native_File_Chooser.H

10.85 Fl_Paged_Device.H File Reference

declaration of class [Fl_Paged_Device](#).

```

#include <FL/Fl_Device.H>
#include <FL/Fl_Window.H>

```

Classes

- class [Fl_Paged_Device](#)
Represents page-structured drawing surfaces.
- struct [Fl_Paged_Device::page_format](#)
width, height and name of a page format

Macros

- #define [NO_PAGE_FORMATS](#) 30 /* MSVC6 compilation fix */
Number of elements in enum Page_Format.

10.85.1 Detailed Description

declaration of class [Fl_Paged_Device](#).

10.111 Fl_Shared_Image.H File Reference

[Fl_Shared_Image](#) class.

```
#include "Fl_Image.H"
```

Classes

- class [Fl_Shared_Image](#)

This class supports caching, loading, scaling, and drawing of image files.

Typedefs

- typedef [Fl_Image](#) *(* [Fl_Shared_Handler](#)) (const char *name, [uchar](#) *header, int headerlen)

Functions

- FL_EXPORT void [fl_register_images](#) ()
Register the image formats.

10.111.1 Detailed Description

[Fl_Shared_Image](#) class.

10.111.2 Function Documentation

10.111.2.1 fl_register_images()

```
FL_EXPORT void fl_register_images ( ) [extern]
```

Register the image formats.

This function is provided in the fltk_images library and registers all of the "extra" image file formats that are not part of the core FLTK library.

10.112 Fl_Shared_Image.H

10.113 fl_show_colormap.H File Reference

The `fl_show_colormap()` function hides the implementation classes used to provide the popup window and color selection mechanism.

Functions

- FL_EXPORT `Fl_Color fl_show_colormap(Fl_Color oldcol)`

Pops up a window to let the user pick a colormap entry.

10.113.1 Detailed Description

The `fl_show_colormap()` function hides the implementation classes used to provide the popup window and color selection mechanism.

00038 /*
00039 "character size" is the size of a UTF-8 character in bytes
00040 "character width" is the width of a Unicode character in pixels
00041 "column" was originally defined as a character offset from the left margin.
00042 It was identical to the byte offset. In UTF-8, we have neither a byte offset
00043 nor truly fixed width fonts (*). Column could be a pixel value multiplied with
00044 an average character width (which is a bearable approximation).
00045
00046 * in Unicode, there are no fixed width fonts! Even if the ASCII characters may
00047 happen to be all the same width in pixels, Chinese characters surely are not.
00048 There are plenty of exceptions, like ligatures, that make special handling of
00049 "fixed" character widths a nightmare. I decided to remove all references to
00050 fixed fonts and see "columns" as a multiple of the average width of a
00051 character in the main font.

```

Classes

- class [Fl_Tree](#)
Tree widget.

Enumerations

- enum [Fl_Tree_Reason](#) {
[FL_TREE_REASON_NONE](#) =0 , [FL_TREE_REASON_SELECTED](#) , [FL_TREE_REASON_DESELECTED](#) ,
[FL_TREE_REASON_RESELECTED](#) ,
[FL_TREE_REASON_OPENED](#) , [FL_TREE_REASON_CLOSED](#) , [FL_TREE_REASON_DRAGGED](#) }
The reason the callback was invoked.

10.134.1 Detailed Description

This file contains the definitions of the `Fl_Tree` class.

10.134.2 Enumeration Type Documentation

10.134.2.1 `Fl_Tree_Reason`

enum `Fl_Tree_Reason`

The reason the callback was invoked.

Enumerator

<code>FL_TREE_REASON_NONE</code>	unknown reason
<code>FL_TREE_REASON_SELECTED</code>	an item was selected
<code>FL_TREE_REASON_DESELECTED</code>	an item was de-selected
<code>FL_TREE_REASON_RESELECTED</code>	an item was re-selected (e.g. double-clicked)
<code>FL_TREE_REASON_OPENED</code>	an item was opened
<code>FL_TREE_REASON_CLOSED</code>	an item was closed
<code>FL_TREE_REASON_DRAGGED</code>	an item was dragged into a new place

```

10.140.2 Enumeration Type Documentation

10.140.2.1 FI_Tree_Connector

enum [FI_Tree_Connector](#)

Defines the style of connection lines between items.

Enumerator

FL_TREE_CONNECTOR_NONE	Use no lines connecting items.
FL_TREE_CONNECTOR_DOTTED	Use dotted lines connecting items (default)
FL_TREE_CONNECTOR_SOLID	Use solid lines connecting items.

10.140.2.2 Fl_Tree_Item_Draw_Mode

enum [Fl_Tree_Item_Draw_Mode](#)

Bit flags that control how item's labels and widget(s) are drawn in the tree via `item_draw_mode()`.

Enumerator

FL_TREE_ITEM_DRAW_DEFAULT	If widget() defined, draw in place of label, and widget() tracks item height (default)
FL_TREE_ITEM_DRAW_LABEL_AND_WIDGET	If widget() defined, include label to the left of the widget.
FL_TREE_ITEM_HEIGHT_FROM_WIDGET	If widget() defined, widget()'s height controls item's height.

10.140.2.3 Fl_Tree_Item_Reselect_Mode

enum [Fl_Tree_Item_Reselect_Mode](#)

Defines the ways an item can be (re) selected via `item_reselect_mode()`.

Enumerator

FL_TREE_SELECTABLE_ONCE	Item can only be selected once (default)
FL_TREE_SELECTABLE_ALWAYS	Enables FL_TREE_REASON_RESELECTED events for callbacks.

10.140.2.4 Fl_Tree_Select

enum [Fl_Tree_Select](#)

Tree selection style.

Enumerator

FL_TREE_SELECT_NONE	Nothing selected when items are clicked.
FL_TREE_SELECT_SINGLE	Single item selected when item is clicked (default)
FL_TREE_SELECT_MULTI	Multiple items can be selected by clicking with SHIFT, CTRL or mouse drags.
FL_TREE_SELECT_SINGLE_DRAGGABLE	Single items may be selected, and they may be. reordered by mouse drag.

10.140.2.5 Fl_Tree_Sort

enum [Fl_Tree_Sort](#)

Sort order options for items added to the tree.

Enumerator

FL_TREE_SORT_NONE	No sorting; items are added in the order defined (default).
FL_TREE_SORT_ASCENDING	Add items in ascending sort order.
FL_TREE_SORT_DESCENDING	Add items in descending sort order.

10.142 fl_types.h File Reference

This file contains simple "C"-style type definitions.

Typedefs

Miscellaneous

- typedef unsigned int **Fl_Char**
24-bit Unicode character - upper 8 bits are unused
- typedef const char * **Fl_CString**
Flexible length UTF-8 Unicode read-only string.
- typedef unsigned int **Fl_Shortcut**
24-bit Unicode character + 8-bit indicator for keyboard flags

- typedef char * [Fl_String](#)
Flexible length UTF-8 Unicode text.
- typedef unsigned char **uchar**
unsigned char
- typedef unsigned long **ulong**
unsigned long

10.142.1 Detailed Description

This file contains simple "C"-style type definitions.

10.142.2 Typedef Documentation

10.142.2.1 Fl_CString

```
typedef const char* Fl_CString
```

Flexible length UTF-8 Unicode read-only string.

See also

[Fl_String](#)

10.142.2.2 Fl_String

```
typedef char* Fl_String
```

Flexible length UTF-8 Unicode text.

Todo FIXME: temporary (?) typedef to mark UTF-8 and Unicode conversions

10.144 fl_utf8.h File Reference

header for Unicode and UTF-8 character handling

```
#include "Fl_Export.H"
#include "fl_types.h"
#include <stdio.h>
#include <string.h>
#include <stdlib.h>
#include <sys/types.h>
#include <sys/stat.h>
#include <locale.h>
```

Macros

- #define **xchar** unsigned short

Functions

- FL_EXPORT int [fl_access](#) (const char *f, int mode)
Cross-platform function to test a files access() with a UTF-8 encoded name or value.
- FL_EXPORT int [fl_chmod](#) (const char *f, int mode)
Cross-platform function to set a files mode() with a UTF-8 encoded name or value.
- FL_EXPORT int [fl_execvp](#) (const char *file, char *const *argv)
- FL_EXPORT FILE * [fl_fopen](#) (const char *f, const char *mode)
Cross-platform function to open files with a UTF-8 encoded name.
- FL_EXPORT char * [fl_getcwd](#) (char *b, int l)
Cross-platform function to get the current working directory as a UTF-8 encoded value.
- FL_EXPORT char * [fl_getenv](#) (const char *v)
Cross-platform function to get environment variables with a UTF-8 encoded name or value.
- FL_EXPORT char [fl_make_path](#) (const char *path)
Cross-platform function to recursively create a path in the file system.
- FL_EXPORT void [fl_make_path_for_file](#) (const char *path)
Cross-platform function to create a path for the file in the file system.
- FL_EXPORT int [fl_mkdir](#) (const char *f, int mode)
Cross-platform function to create a directory with a UTF-8 encoded name.
- FL_EXPORT unsigned int [fl_nonspacing](#) (unsigned int ucs)
Returns true if the Unicode character ucs is non-spacing.
- FL_EXPORT int [fl_open](#) (const char *f, int oflags,...)
Cross-platform function to open files with a UTF-8 encoded name.
- FL_EXPORT int [fl_rename](#) (const char *f, const char *n)
Cross-platform function to rename a filesystem object using UTF-8 encoded names.
- FL_EXPORT int [fl_rmdir](#) (const char *f)
Cross-platform function to remove a directory with a UTF-8 encoded name.
- FL_EXPORT int [fl_stat](#) (const char *f, struct stat *b)
Cross-platform function to stat() a file using a UTF-8 encoded name or value.
- FL_EXPORT int [fl_system](#) (const char *cmd)
Cross-platform function to run a system command with a UTF-8 encoded string.
- FL_EXPORT int [fl_tolower](#) (unsigned int ucs)
Returns the Unicode lower case value of ucs.
- FL_EXPORT int [fl_toupper](#) (unsigned int ucs)
Returns the Unicode upper case value of ucs.
- FL_EXPORT unsigned [fl_ucs_to_Utf16](#) (const unsigned ucs, unsigned short *dst, const unsigned dstlen)
- FL_EXPORT int [fl_unlink](#) (const char *f)

- Cross-platform function to unlink() (that is, delete) a file using a UTF-8 encoded filename.*
- FL_EXPORT char * [fl_utf2mbcs](#) (const char *s)
Converts UTF-8 string s to a local multi-byte character string.
 - FL_EXPORT const char * [fl_utf8back](#) (const char *p, const char *start, const char *end)
 - FL_EXPORT int [fl_utf8bytes](#) (unsigned ucs)
Return the number of bytes needed to encode the given UCS4 character in UTF-8.
 - FL_EXPORT unsigned [fl_utf8decode](#) (const char *p, const char *end, int *len)
 - FL_EXPORT int [fl_utf8encode](#) (unsigned ucs, char *buf)
 - FL_EXPORT unsigned [fl_utf8from_mb](#) (char *dst, unsigned dstlen, const char *src, unsigned srclen)
 - FL_EXPORT unsigned [fl_utf8froma](#) (char *dst, unsigned dstlen, const char *src, unsigned srclen)
 - FL_EXPORT unsigned [fl_utf8fromwc](#) (char *dst, unsigned dstlen, const wchar_t *src, unsigned srclen)
 - FL_EXPORT const char * [fl_utf8fwd](#) (const char *p, const char *start, const char *end)
 - FL_EXPORT int [fl_utf8len](#) (char c)
Returns the byte length of the UTF-8 sequence with first byte c, or -1 if c is not valid.
 - FL_EXPORT int [fl_utf8len1](#) (char c)
Returns the byte length of the UTF-8 sequence with first byte c, or 1 if c is not valid.
 - FL_EXPORT int [fl_utf8locale](#) (void)
 - FL_EXPORT int [fl_utf8test](#) (const char *src, unsigned len)
 - FL_EXPORT unsigned [fl_utf8to_mb](#) (const char *src, unsigned srclen, char *dst, unsigned dstlen)
 - FL_EXPORT unsigned [fl_utf8toa](#) (const char *src, unsigned srclen, char *dst, unsigned dstlen)
 - FL_EXPORT unsigned [fl_utf8toUtf16](#) (const char *src, unsigned srclen, unsigned short *dst, unsigned dstlen)
 - FL_EXPORT unsigned [fl_utf8towc](#) (const char *src, unsigned srclen, wchar_t *dst, unsigned dstlen)
Converts a UTF-8 string into a wide character string.
 - FL_EXPORT int [fl_utf_nb_char](#) (const unsigned char *buf, int len)
Returns the number of Unicode chars in the UTF-8 string.
 - FL_EXPORT int [fl_utf_strcasecmp](#) (const char *s1, const char *s2)
UTF-8 aware strcasecmp - converts to Unicode and tests.
 - FL_EXPORT int [fl_utf_strncasecmp](#) (const char *s1, const char *s2, int n)
UTF-8 aware strncasecmp - converts to lower case Unicode and tests.
 - FL_EXPORT int [fl_utf_tolower](#) (const unsigned char *str, int len, char *buf)
Converts the string str to its lower case equivalent into buf.
 - FL_EXPORT int [fl_utf_toupper](#) (const unsigned char *str, int len, char *buf)
Converts the string str to its upper case equivalent into buf.
 - FL_EXPORT int [fl_wcwidth](#) (const char *src)
extended wrapper around fl_wcwidth_(unsigned int ucs) function.
 - FL_EXPORT int [fl_wcwidth_](#) (unsigned int ucs)
wrapper to adapt Markus Kuhn's implementation of wcwidth() for FLTK

10.144.1 Detailed Description

header for Unicode and UTF-8 character handling

10.150 Fl_Widget.H File Reference

[Fl_Widget](#), [Fl_Label](#) classes .

```
#include "Enumerations.H"
```

Classes

- struct [Fl_Label](#)
This struct stores all information for a text or mixed graphics label.
- class [Fl_Widget](#)
Fl_Widget is the base class for all widgets in FLTK.

Macros

- #define [FL_RESERVED_TYPE](#) 100
Reserved type numbers (necessary for my cheapo RTTI) start here.

Typedefs

- typedef void() **FI_Callback**([Fl_Widget](#) *, void *)
Default callback type definition for all fltk widgets (by far the most used)
- typedef void() **FI_Callback0**([Fl_Widget](#) *)
One parameter callback type definition passing only the widget.
- typedef void() **FI_Callback1**([Fl_Widget](#) *, long)
Callback type definition passing the widget and a long data value.
- typedef [Fl_Callback](#) * **FI_Callback_p**
Default callback type pointer definition for all fltk widgets.
- typedef long [fl_intptr_t](#)
- typedef unsigned long [fl_uintptr_t](#)

10.150.1 Detailed Description

[Fl_Widget](#), [Fl_Label](#) classes .

10.150.2 Macro Definition Documentation

10.150.2.1 FL_RESERVED_TYPE

```
#define FL_RESERVED_TYPE 100
```

Reserved type numbers (necessary for my cheapo RTTI) start here.

Grep the header files for "RESERVED_TYPE" to find the next available number.

10.150.3 Typedef Documentation

10.150.3.1 fl_intptr_t

```
typedef long fl_intptr_t
```

Todo typedef's [fl_intptr_t](#) and [fl_uintptr_t](#) should be documented.

10.151 Fl_Widget.H

10.152 Fl_Window.H File Reference

[Fl_Window](#) widget .

```

#include "Fl_Group.H"
#include "Fl_Bitmap.H"
#include <stdlib.h>

```

Classes

- class [Fl_Window](#)
This widget produces an actual window.
- struct [Fl_Window::shape_data_type](#)

Data supporting a non-rectangular window shape.

Macros

- `#define FL_DOUBLE_WINDOW 0xF1`
double window type id
- `#define FL_WINDOW 0xF0`
window type id all subclasses have type() >= this

10.152.1 Detailed Description

[Fl_Window](#) widget .

10.153 Fl_Window.H

[Go to the documentation of this file.](#)

10.158 gl.h File Reference

This file defines wrapper functions for OpenGL in FLTK.

```

#include "Enumerations.H"
#include <GL/gl.h>

```

Functions

- FL_EXPORT void [gl_color](#) (Fl_Color i)

Sets the current OpenGL color to an FLTK color.
- void [gl_color](#) (int c)

back compatibility
- FL_EXPORT int [gl_descent](#) ()

Returns the current font's descent.
- FL_EXPORT void [gl_draw](#) (const char *)

Draws a nul-terminated string in the current font at the current position.
- FL_EXPORT void [gl_draw](#) (const char *, float x, float y)

- Draws a nul-terminated string in the current font at the given position.*

 - FL_EXPORT void [gl_draw](#) (const char *, int n)
- Draws an array of n characters of the string in the current font at the current position.*

 - FL_EXPORT void [gl_draw](#) (const char *, int n, float x, float y)
- Draws n characters of the string in the current font at the given position.*

 - FL_EXPORT void [gl_draw](#) (const char *, int n, int x, int y)
- Draws n characters of the string in the current font at the given position.*

 - FL_EXPORT void [gl_draw](#) (const char *, int x, int y)
- Draws a nul-terminated string in the current font at the given position.*

 - FL_EXPORT void [gl_draw](#) (const char *, int x, int y, int w, int h, [Fl_Align](#))
- Draws a string formatted into a box, with newlines and tabs expanded, other control characters changed to ^X.*

 - FL_EXPORT void [gl_draw_image](#) (const [uchar](#) *, int x, int y, int w, int h, int d=3, int ld=0)
- FL_EXPORT void [gl_finish](#) ()

Releases an OpenGL context.
- FL_EXPORT void [gl_font](#) (int fontid, int size)

Sets the current OpenGL font to the same font as calling [fl_font\(\)](#)
- FL_EXPORT int [gl_height](#) ()

Returns the current font's height.
- FL_EXPORT void [gl_measure](#) (const char *, int &x, int &y)

Measure how wide and tall the string will be when drawn by the [gl_draw\(\)](#) function.
- FL_EXPORT void [gl_rect](#) (int x, int y, int w, int h)

Outlines the given rectangle with the current color.
- void [gl_rectf](#) (int x, int y, int w, int h)

Fills the given rectangle with the current color.
- FL_EXPORT void [gl_start](#) ()

Creates an OpenGL context.
- FL_EXPORT double [gl_width](#) (const char *)

Returns the width of the string in the current font.
- FL_EXPORT double [gl_width](#) (const char *, int n)

Returns the width of n characters of the string in the current font.
- FL_EXPORT double [gl_width](#) ([uchar](#))

Returns the width of the character in the current font.

10.158.1 Detailed Description

This file defines wrapper functions for OpenGL in FLTK.

To use OpenGL from within an FLTK application you MUST use [gl_visual\(\)](#) to select the default visual before doing [show\(\)](#) on any windows. Mesa will crash if you try to use a visual not returned by [glxChooseVidual](#).

This does not work with [Fl_Double_Window](#)'s! It will try to draw into the front buffer. Depending on the system this will either crash or do nothing (when pixmaps are being used as back buffer and GL is being done by hardware), work correctly (when GL is done with software, such as Mesa), or draw into the front buffer and be erased when the buffers are swapped (when double buffer hardware is being used)

10.158.2 Function Documentation

10.158.2.1 [gl_color\(\)](#)

```
FL_EXPORT void gl_color (
    Fl\_Color i )
```

Sets the current OpenGL color to an FLTK color.

For color-index modes it will use [fl_xpixel\(c\)](#), which is only right if the window uses the default colormap!

10.158.2.2 gl_draw() [1/7]

```
FL_EXPORT void gl_draw (  
    const char * str )
```

Draws a nul-terminated string in the current font at the current position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.3 gl_draw() [2/7]

```
FL_EXPORT void gl_draw (  
    const char * str,  
    float x,  
    float y )
```

Draws a nul-terminated string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.4 gl_draw() [3/7]

```
FL_EXPORT void gl_draw (  
    const char * str,  
    int n )
```

Draws an array of n characters of the string in the current font at the current position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.5 gl_draw() [4/7]

```
FL_EXPORT void gl_draw (  
    const char * str,  
    int n,  
    float x,  
    float y )
```

Draws n characters of the string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.6 gl_draw() [5/7]

```
FL_EXPORT void gl_draw (  
    const char * str,  
    int n,  
    int x,  
    int y )
```

Draws n characters of the string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.7 gl_draw() [6/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int x,
    int y )
```

Draws a nul-terminated string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

10.158.2.8 gl_draw() [7/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int x,
    int y,
    int w,
    int h,
    Fl_Align align )
```

Draws a string formatted into a box, with newlines and tabs expanded, other control characters changed to ^X. and aligned with the edges or center. Exactly the same output as fl_draw().

10.158.2.9 gl_rect()

```
FL_EXPORT void gl_rect (
    int x,
    int y,
    int w,
    int h )
```

Outlines the given rectangle with the current color.

If [Fl_Gl_Window::ortho\(\)](#) has been called, then the rectangle will exactly fill the given pixel rectangle.

10.158.2.10 gl_rectf()

```
void gl_rectf (
    int x,
    int y,
    int w,
    int h ) [inline]
```

Fills the given rectangle with the current color.

10.164 mac.H File Reference

Mac OS X-specific symbols.

Classes

- class [Fl_Mac_App_Menu](#)

Mac OS-specific class allowing to customize and localize the application menu.

Functions

- void `fl_mac_set_about` (`FL_Callback *cb`, `void *user_data`, `int shortcut=0`)
Attaches a callback to the "About myprog" item of the system application menu.
- void `fl_open_callback` (`void(*cb)(const char *)`)
Register a function called for each file dropped onto an application icon.

Variables

- int `fl_mac_os_version`
The version number of the running Mac OS X (e.g., 100604 for 10.6.4)
- int `fl_mac_quit_early`
Determines whether cmd-Q or the "Quit xxx" item of application menu terminates the app or only the event loop.
- class `FL_Sys_Menu_Bar * fl_sys_menu_bar`
The system menu bar.

10.164.1 Detailed Description

Mac OS X-specific symbols.

```

10.173.1 Detailed Description

Utility functions for drawing arcs and circles.

10.174 fl_arci.cxx File Reference

Utility functions for drawing circles using integers.

```
#include <FL/fl_draw.H>
#include <FL/x.H>
#include <config.h>
```

10.174.1 Detailed Description

Utility functions for drawing circles using integers.

10.175 fl_ask.cxx File Reference

Utility Functions for Common Dialogs.

```
#include <stdio.h>
#include <stdarg.h>
#include "flstring.h"
#include <FL/Fl.H>
#include <FL/fl_ask.H>
#include <FL/Fl_Box.H>
#include <FL/Fl_Button.H>
#include <FL/Fl_Return_Button.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Input.H>
#include <FL/Fl_Secret_Input.H>
#include <FL/x.H>
#include <FL/fl_draw.H>
```

Functions

- void [fl_alert](#) (const char *fmt,...)
Shows an alert message dialog box.
- int [fl_ask](#) (const char *fmt,...)
*Shows a dialog displaying the *fmt* message, this dialog features 2 yes/no buttons.*
- void [fl_beep](#) (int type)
Emits a system beep message.
- int [fl_choice](#) (const char *fmt, const char *b0, const char *b1, const char *b2,...)
*Shows a dialog displaying the printf style *fmt* message, this dialog features up to 3 customizable choice buttons.*
- int [fl_choice_n](#) (const char *fmt, const char *b0, const char *b1, const char *b2,...)
Like [fl_choice\(\)](#) but with extended (negative) return values.
- const char * [fl_input](#) (const char *fmt, const char *defstr,...)
*Shows an input dialog displaying the *fmt* message.*

- void `fl_message` (const char *fmt,...)
Shows an information message dialog box.
- void `fl_message_hotspot` (int enable)
Sets whether or not to move the common message box used in many common dialogs like `fl_message()`, `fl_alert()`, `fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()` to follow the mouse pointer.
- int `fl_message_hotspot` (void)
Gets whether or not to move the common message box used in many common dialogs like `fl_message()`, `fl_alert()`, `fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()` to follow the mouse pointer.
- `Fl_Widget * fl_message_icon` ()
Gets the `Fl_Box` icon container of the current default dialog used in many common dialogs like `fl_message()`, `fl_alert()`, `fl_ask()`, `fl_choice()`, `fl_input()`, `fl_password()`
- void `fl_message_title` (const char *title)
Sets the title of the dialog window used in many common dialogs.
- void `fl_message_title_default` (const char *title)
Sets the default title of the dialog window used in many common dialogs.
- const char * `fl_password` (const char *fmt, const char *defstr,...)
Shows an input dialog displaying the `fmt` message.

Variables

- const char * `fl_cancel` = "Cancel"
string pointer used in common dialogs, you can change it to another language
- const char * `fl_close` = "Close"
string pointer used in common dialogs, you can change it to another language
- `Fl_Font fl_message_font` = `FL_HELVETICA`
- `Fl_Fontsize fl_message_size` = -1
- const char * `fl_no` = "No"
string pointer used in common dialogs, you can change it to another language
- const char * `fl_ok` = "OK"
string pointer used in common dialogs, you can change it to another language
- const char * `fl_yes` = "Yes"
string pointer used in common dialogs, you can change it to another language

10.175.1 Detailed Description

Utility Functions for Common Dialogs.

10.176 fl_boxtype.cxx File Reference

drawing code for common box types.

```
#include <FL/Fl.H>
#include <FL/Fl_Widget.H>
#include <FL/fl_draw.H>
#include <config.h>
```

Macros

- `#define D1 BORDER_WIDTH`
- `#define D2 (BORDER_WIDTH+BORDER_WIDTH)`
- `#define fl_border_box fl_rectbound`
allow consistent naming

Functions

- void **fl_border_frame** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a frame of type FL_BORDER_FRAME.
- void **fl_down_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_DOWN_BOX.
- void **fl_down_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_DOWN_FRAME.
- void **fl_draw_box** ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) c)
Draws a box using given type, position, size and color.
- void **fl_embossed_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_EMBOSSED_BOX.
- void **fl_embossed_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_EMBOSSED_FRAME.
- void **fl_engraved_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_ENGRAVED_BOX.
- void **fl_engraved_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_ENGRAVED_FRAME.
- void **fl_flat_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_FLAT_BOX.
- void **fl_frame** (const char *s, int x, int y, int w, int h)
Draws a series of line segments around the given box.
- void **fl_frame2** (const char *s, int x, int y, int w, int h)
Draws a series of line segments around the given box.
- const [uchar](#) * **fl_gray_ramp** ()
- void **fl_internal_boxtype** ([FL_Boxtype](#) t, [FL_Box_Draw_F](#) *f)
Sets the drawing function for a given box type.
- void **fl_no_box** (int, int, int, int, [FL_Color](#))
Draws a box of type FL_NO_BOX.
- void **fl_rectbound** (int x, int y, int w, int h, [FL_Color](#) bgcolor)
Draws a bounded rectangle with a given position, size and color.
- void **fl_thin_down_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_THIN_DOWN_BOX.
- void **fl_thin_down_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_THIN_DOWN_FRAME.
- void **fl_thin_up_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_THIN_UP_BOX.
- void **fl_thin_up_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_THIN_UP_FRAME.
- void **fl_up_box** (int x, int y, int w, int h, [FL_Color](#) c)
Draws a box of type FL_UP_BOX.
- void **fl_up_frame** (int x, int y, int w, int h, [FL_Color](#))
Draws a frame of type FL_UP_FRAME.

10.176.1 Detailed Description

drawing code for common box types.

10.176.2 Function Documentation

10.176.2.1 fl_internal_boxtype()

```
void fl_internal_boxtype (  
    Fl_Boxtype t,  
    Fl_Box_Draw_F * f )
```

Sets the drawing function for a given box type.

Parameters

in	<i>t</i>	box type
in	<i>f</i>	box drawing function

10.176.2.2 fl_rectbound()

```
void fl_rectbound (
    int x,
    int y,
    int w,
    int h,
    Fl_Color bgcolor )
```

Draws a bounded rectangle with a given position, size and color.
Equivalent to drawing a box of type FL_BORDER_BOX.

10.178 fl_color.cxx File Reference

Color handling.

```

#include "Fl_XColor.H"
#include <FL/Fl.H>
#include <FL/x.H>
#include <FL/fl_draw.H>
#include "fl_cmap.h"

```

Macros

- **#define fl_overlay 0**
HAVE_OVERLAY determines whether fl_overlay is variable or defined as 0.

Functions

- **Fl_Color fl_color_average** (Fl_Color color1, Fl_Color color2, float weight)
Returns the weighted average color between the two given colors.
- **Fl_Color fl_contrast** (Fl_Color fg, Fl_Color bg)
Returns a color that contrasts with the background color.
- **Fl_Color fl_inactive** (Fl_Color c)
Returns the inactive, dimmed version of the given color.
- **ulong fl_xpixel** (Fl_Color i)
Returns the X pixel number used to draw the given FLTK color index.
- **ulong fl_xpixel** (uchar r, uchar g, uchar b)
Returns the X pixel number used to draw the given rgb color.

Variables

- **uchar fl_bluemask**
color mask used in current color map handling
- **int fl_blueshift**
color shift used in current color map handling
- **int fl_extrashift**
color shift used in current color map handling
- **uchar fl_greenmask**
color mask used in current color map handling

- **int fl_greenshift**
color shift used in current color map handling
- **uchar fl_redmask**
color mask used in current color map handling
- **int fl_redshift**
color shift used in current color map handling
- **Fl_XColor fl_xmap [1][256]**
HAVE_OVERLAY determines whether fl_xmap is one or two planes.

10.178.1 Detailed Description

Color handling.

10.179 Fl_compose.cxx File Reference

Utility functions to support text input.

```
#include <FL/Fl.H>
#include <FL/x.H>
```

Variables

- XIC **fl_xim_ic**

10.179.1 Detailed Description

Utility functions to support text input.

10.180 fl_curve.cxx File Reference

Utility for drawing Bezier curves, adding the points to the current fl_begin/fl_vertex/fl_end path.

```
#include <FL/fl_draw.H>
#include <math.h>
```

10.180.1 Detailed Description

Utility for drawing Bezier curves, adding the points to the current fl_begin/fl_vertex/fl_end path.

Incremental math implementation: I very much doubt this is optimal! From Foley/vanDam page 511. If anybody has a better algorithm, please send it!

10.181 fl_dnd_x.cxx

```

Functions

- void [fl_begin_offscreen](#) (FI_Offscreen ctx)
 - Send all subsequent drawing commands to this offscreen buffer.*
- char [fl_can_do_alpha_blending](#) ()
 - Checks whether platform supports true alpha blending for RGBA images.*
- void [fl_copy_offscreen](#) (int x, int y, int w, int h, FI_Offscreen pixmap, int srcx, int srcy)
 - Copy a rectangular area of the given offscreen buffer into the current drawing destination.*
- FI_Offscreen [fl_create_offscreen](#) (int w, int h)
 - Creation of an offscreen graphics buffer.*
- void [fl_delete_offscreen](#) (FI_Offscreen ctx)
 - Deletion of an offscreen graphics buffer.*
- void [fl_end_offscreen](#) ()
 - Quit sending drawing commands to the current offscreen buffer.*

Variables

- const int **stack_max** = 16

10.182.1 Detailed Description

[FI_Double_Window](#) implementation.
